

Potential Applications of the UNFC

Future Developments

Nuclear, Renewable Energy and the UNFC

Shares of World Primary Energy

Renewable energy is on a significant growth trend

The same issues impacting mineral and petroleum projects are relevant for nuclear and renewable energy

There is a real need for a consistent framework for comparing alternatives with conventional energy forms

UNFC could meet these needs with minimal modification, providing a tool for communication around issues of sustainable energy

Not part of the EGRC current mandate, but something with real stakeholder commitment

Future Applications

- Gas storage and injection processes
- Water resources
- Timber and forestry
- ?
