Disaster Risk Reduction

2030 Agenda for Sustainable Development

What is GEOSS?

GEOSS is a global infrastructure which builds on national, regional and international observation systems and their thousands of ground, in situ, air-borne, ship-borne and space-based instruments.

Why GEOSS?

No one country has the resources needed to collect the Earth observations data required for addressing the major global environmental issues of today. A global system of systems approach leverages the existing infrastructures used for Earth observations.

How to access data from GEOSS?

The GEOSS Common Infrastructure (GCI) links more than 150 different data catalogs containing more than 400 million open EO resources, accessible through an easy-to-use GEOSS Portal. There were more than 4.4 million enquiries to the GCI in 2016 alone.

The Group on Earth Observations (GEO)

GEO engages providers and users of climate data resources through targeted workshops and its annual international Plenary to ensure a sustained dialogue around the information needs of those seeking to integrate climate products and services into adaptation processes and decisions.

GEO's Societal Benefit Areas – Climate change is across all areas

Priority Area: Climate Change

GEO-XIII Plenary (November 2016) agreed on three priority engagement areas, including “Climate Change – Greenhouse Gas Monitoring” to support the implementation of the Paris Agreement. Following the GEO Executive Committee in March 2017 the focus will be on both adaptation and mitigation.

Regional Initiatives

GEO is building Regional Initiatives, such as AfrigeOSS (in Africa), AmeriGEOSS (in the Americas) and AOGEOSS (in Asia-Oceania) that provide cooperation frameworks at the regional level to support decision-making and regional sustainable development, as well as building institutional and individual capacity by engaging experts, stakeholders and decision makers in the region. The regional initiatives have identified data access, processing and distribution infrastructure capabilities as limiting factors for countries, in particular developing countries, to the uptake of Earth observations in decision-making.

To combat this challenge AfrigeOSS is leveraging the Africa Data Intensive Research Cloud (ADIRC), which aims to provide researchers in African countries with access to high performance computing (HPC) infrastructures, enabling them to take part in big data science projects and to build Earth observation data processing platforms.

Responding to Paris Agreement

Policy need for research, systematic observations and scientific data emerges from Paris Agreement. GEO aims to respond to:

- National Reporting (Articles 4 and 13)
- Mitigation: Knowledge of evolution of sinks and sources (Article 5)
- Adaptation: Strengthening cooperation (Article 7.6); Scientific knowledge and systematic observations (Article 7.7)
- Technology Transfer (Article 10)
- Capacity Development (Article 11)
- Global Stocktaking (Article 14)

Towards policy-relevant global carbon cycle observation and analysis

The *GEO Carbon and GHG Initiative (GEO-C)* is a global effort proposed in the framework of GEO to promote interoperability and provide integration across different parts of the system, particularly at domain interfaces. The final users, in addition to the scientific community, are countries and decision makers that can benefit from the improved information flow and use it to address climate change policy.

Comprehensive data

The Initiative is motivated by the long-term vision of a data-driven system to provide comprehensive knowledge on changes in the global carbon cycle and GHG emissions as a result of human activities and global change.

GEO-C builds on existing initiatives and networks, supports continuity and coherence, facilitates cooperation and interoperability and fills in gaps.

Data integration from regional networks

Aligned to Paris Agreement

All activities and deliverables of this Initiative will be aligned, improved and adapted to address the climate policy agenda, particularly to contribute to the successful implementation of the Paris Agreement

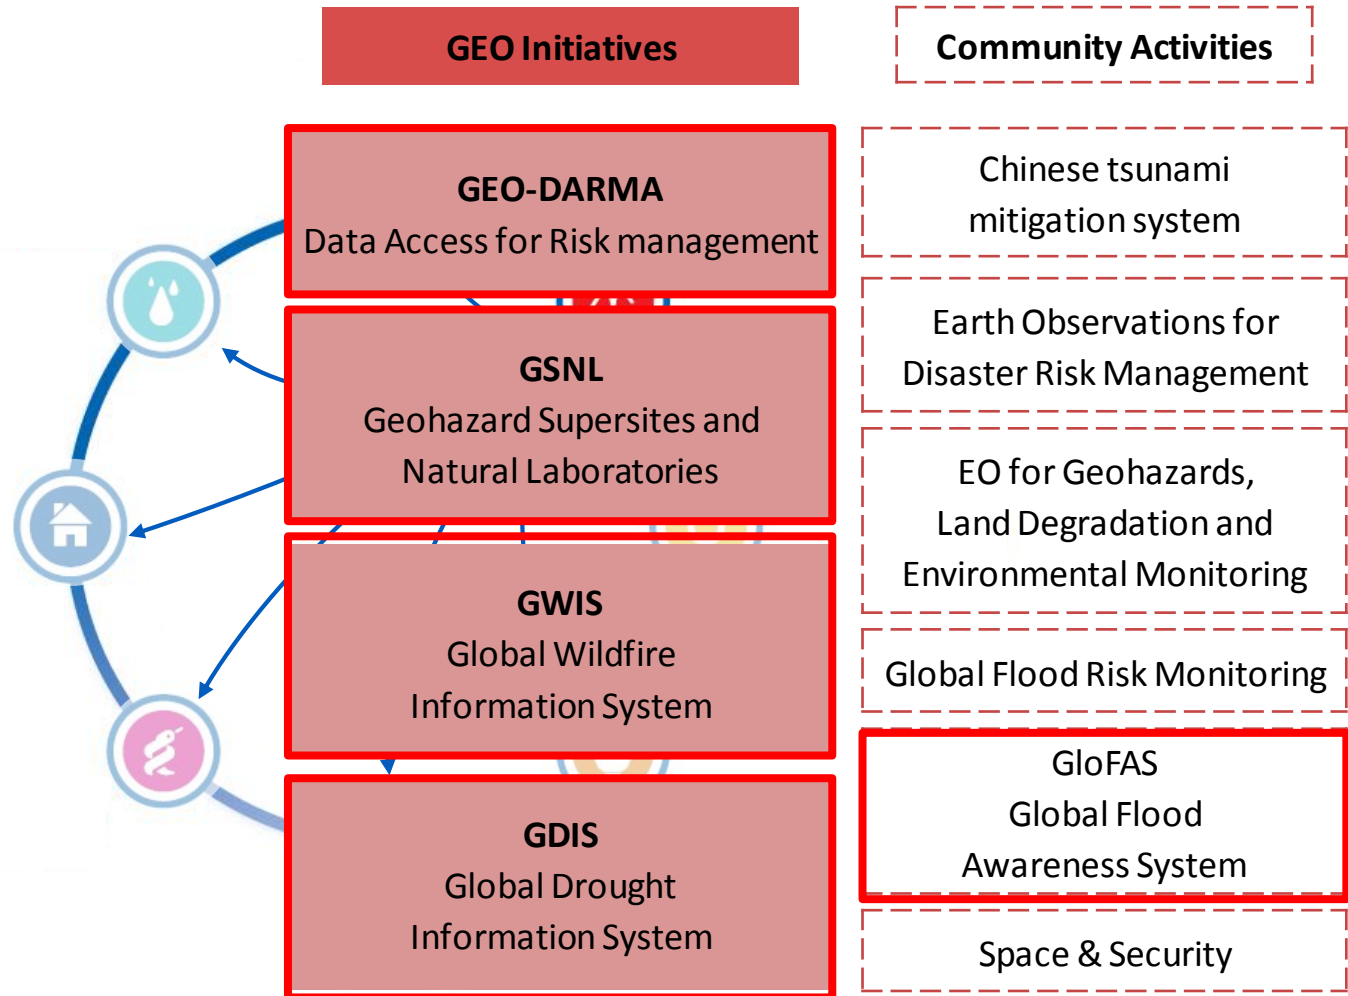

Up-to-date information

Support for decision makers with timely policy-relevant information to inform mitigation and adaptation actions.

Global Partnership on Disaster-related Statistics

NSOs called for establishment of a **Global Partnership on Disaster-related Statistics** at the World Data Forum 2017 in Cape Town.

Overall objectives:

- Support Member States' reporting on Sendai Framework and SDG Indicators
- Establish long-term partnerships between National Statistical Offices, national sectoral ministries / disaster risk management / technical institutions, International Organizations and relevant technical partners
- Respond to the instructions of Member States:
 - Open-ended Intergovernmental Expert Working Group on Indicators and Terminology for Disaster Risk Reduction - A/RES/71/276
 - Inter-agency and Expert Group on SDGs Indicators - E/CN.3/2017/2*

CES Task Force on measuring Extreme Events and Disasters

Substantive chapters of the *Recommendations to National Statistical Offices for measuring extreme events and disasters*

- Scope and conceptual understanding of Extreme Events and Disaster-related Statistics
- Defining the role of National Statistical Offices
- Statistical tools for EED-related statistics
 - Surveys
 - Registers
 - Big data
 - **Geospatial information (GEO leading this work package)**
- Conclusions: recommendations to NSOs
- Proposed follow up work
- Glossary of important terms

GEO support for SDGs

Target Contribute to progress on the Target yet not the Indicator per se							Goal	Indicator Direct measure or Indirect support
						1.5	1 No poverty	
			2.3	2.4		2.c	2 Zero hunger	2.4.1
			3.3	3.4	3.9	3.d	3 Good health and well-being	3.9.1
							4 Quality education	
							5 Gender equality	5.9.1
	6.3	6.4	6.5	6.6	6.a	6.b	6 Clean water and sanitation	6.3.2 6.4.2 6.5.1 6.6.1
			7.2	7.3	7.a	7.b	7 Affordable and clean energy	7.1.1
						8.4	8 Decent work and economic growth	
			9.1	9.4	9.5	9.a	9 Industry, Innovation and Infrastructure	9.1.1
							10 Reduced Inequalities	
	11.3	11.4	11.5	11.6	11.7	11.b	11 Sustainable cities and communities	11.3.1 11.6.2 11.7.1
				12.2	12.a	12.b	12 Responsible consumption and production	
				13.1	13.3	13.b	13 Climate action	13.1.1
	14.1	14.2	14.3	14.4	14.6	14.7	14 Life below water	14.3.1
15.1	15.2	15.3	15.4	15.5	15.7	15.8	15 Life on land	15.1.1 15.2.1 15.3.1 15.4.1 15.4.2
							16 Peace, Justice and strong Institutions	
			17.6	17.7	17.9	17.16	17 Partnerships for the goals	

Work closely with UN-GGIM.

GEO represented on Inter-Agency Expert Group (IAEG) of the UN Statistics Division.

GEO is the Earth Observation Anchor Partner to the Global Partnership for Sustainable Development Data (GPSDD).

Sustainable Development Goals

- Multiple applications of land cover and land cover change exist to **evaluate progress** towards various SDG targets;
- Usefulness of land cover information for the **implementation** of the SDGs is being recognized.

6 CLEAN WATER
AND SANITATION

6.6 By 2020, protect and restore water-related ecosystems, including mountains, forests, wetlands, rivers, aquifers and lakes

- **Indicator 6.6.1 Change in the extent of water-related ecosystems over time (Tier III, Custodian agency: UNEP, Other: UN-Water, IUCN)**
- Land cover datasets can be used to detect changes over time in the extent of wetlands, forests and drylands;
- GEO is referred to in the stakeholder comments as an institution to collaborate with regarding the collection of data (GEOSS);
- Several satellite-based datasets are proposed for the detection of the percentage change in extent of freshwater systems, e.g. derived from Sentinel-2 or Landsat data.

11.3 By 2030, enhance inclusive and sustainable urbanization and capacity for participatory, integrated and sustainable human settlement planning and management in all countries

- **Indicator 11.3.1 Ratio of land consumption rate to population growth rate (Tier II, Potential Custodian agency: UN-Habitat, Other: UNEP)**
- The value of satellite-based EO data to monitor land cover change is acknowledged in the stakeholder comments.
- UNEP proposed to contribute to this indicator through work with GEO-GEOSS on land conversion.

Land degradation

15

LIFE
ON LAND

15.3 By 2030, combat desertification, restore degraded land and soil, including land affected by desertification, drought and floods, and strive to achieve a **land degradation-neutral world**

- Indicator 15.3.1 Percentage of land that is degraded over total land area (**Tier III, Potential Custodian agency: UNCCD, Other: FAO, UNEP**)
- Proposed sub-indicators:
 - Land cover
 - Land productivity
 - Soil organic carbon
- According to UNCCD “land cover and land cover change have multiple applications for evaluating progress towards various SDG targets and give a first indication of land degradation”

Multilateral Environmental Agreements

Convention on
Biological Diversity

- 4 Aichi Targets relate to land cover

- Targets 5, 6 and 12 can be informed by land cover

- Focuses on attaining Land Degradation Neutrality and SDG Target 15.3

Climate

- Land Cover is an Essential Climate Variable (ECV)
- Global-scale wall-to-wall land use products allowing change analysis, are needed by climate modelers, mitigation and adaptation communities
- Parties must submit annual national GHG inventories including estimates of anthropogenic emissions and removals in the land use, land use change and forestry sector
- Six broad land use categories in the 2006 IPCC Guidelines for National Greenhouse Gas Inventories
- Basis for estimating and reporting greenhouse gas emissions and removals from land use and land use conversions

GEO GLAM – leveraging Earth observations for a food-secure world

Crop monitor for Early Warning

Crop monitor for AMIS

Conditions at a glance for AMIS countries (as of January 28th)

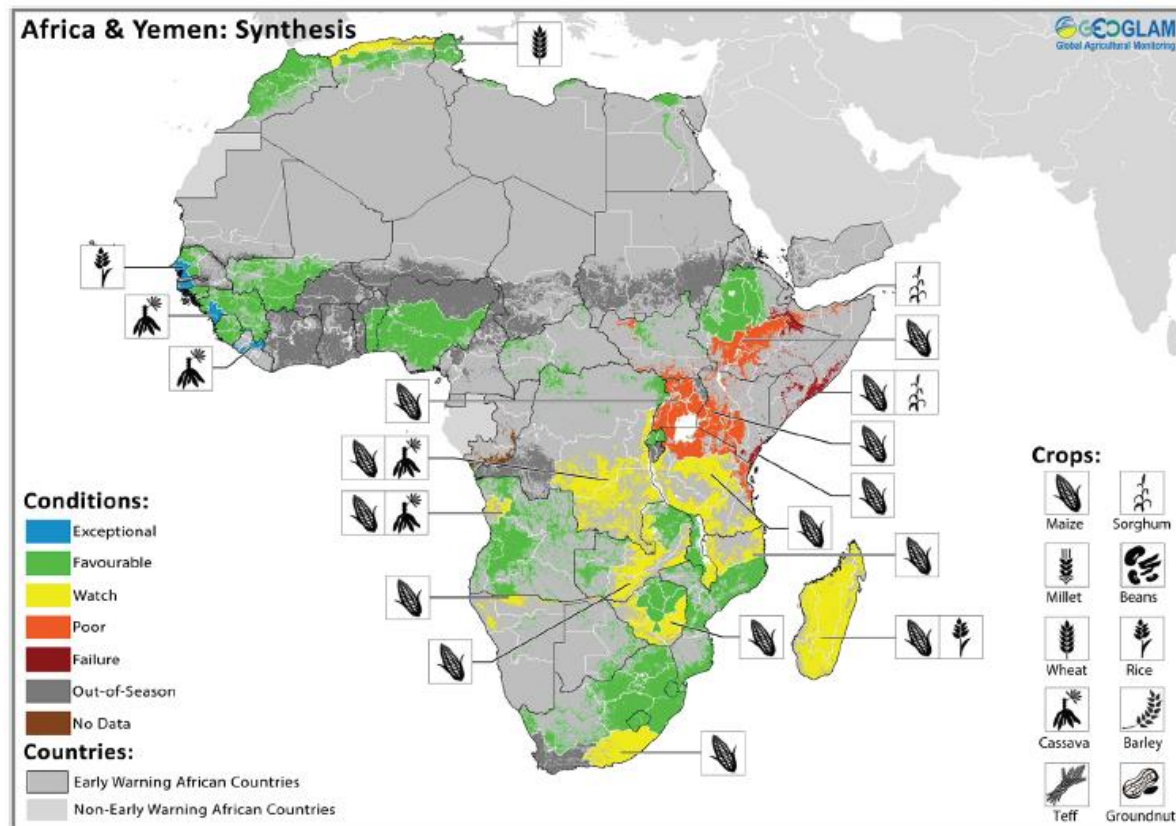

Crop condition map synthesizing information for all four AMIS crops as of January 28th. Crop conditions over the main growing areas for wheat, maize, rice, and soybean are based on a combination of national and regional crop analyst inputs along with earth observation data. Crops that are in other than favourable conditions are displayed on the map with their crop symbol.

2.c

Adopt measures to ensure the proper functioning of food commodity markets and their derivatives and facilitate timely access to market information, including on food reserves, in order to help limit extreme food price volatility.

GEOGLAM can also support other Targets (2.1, 2.4, 2.a, 2.3) and other Goals (12 and 13, with Indicators 12.3 and 13.3).

Crop Monitor for Early Warning: Crop Conditions in Africa and Yemen as of 28 January 2017. Areas which are in other-than-favourable conditions are shown with the affected crop.

EO case studies: Agenda 2030

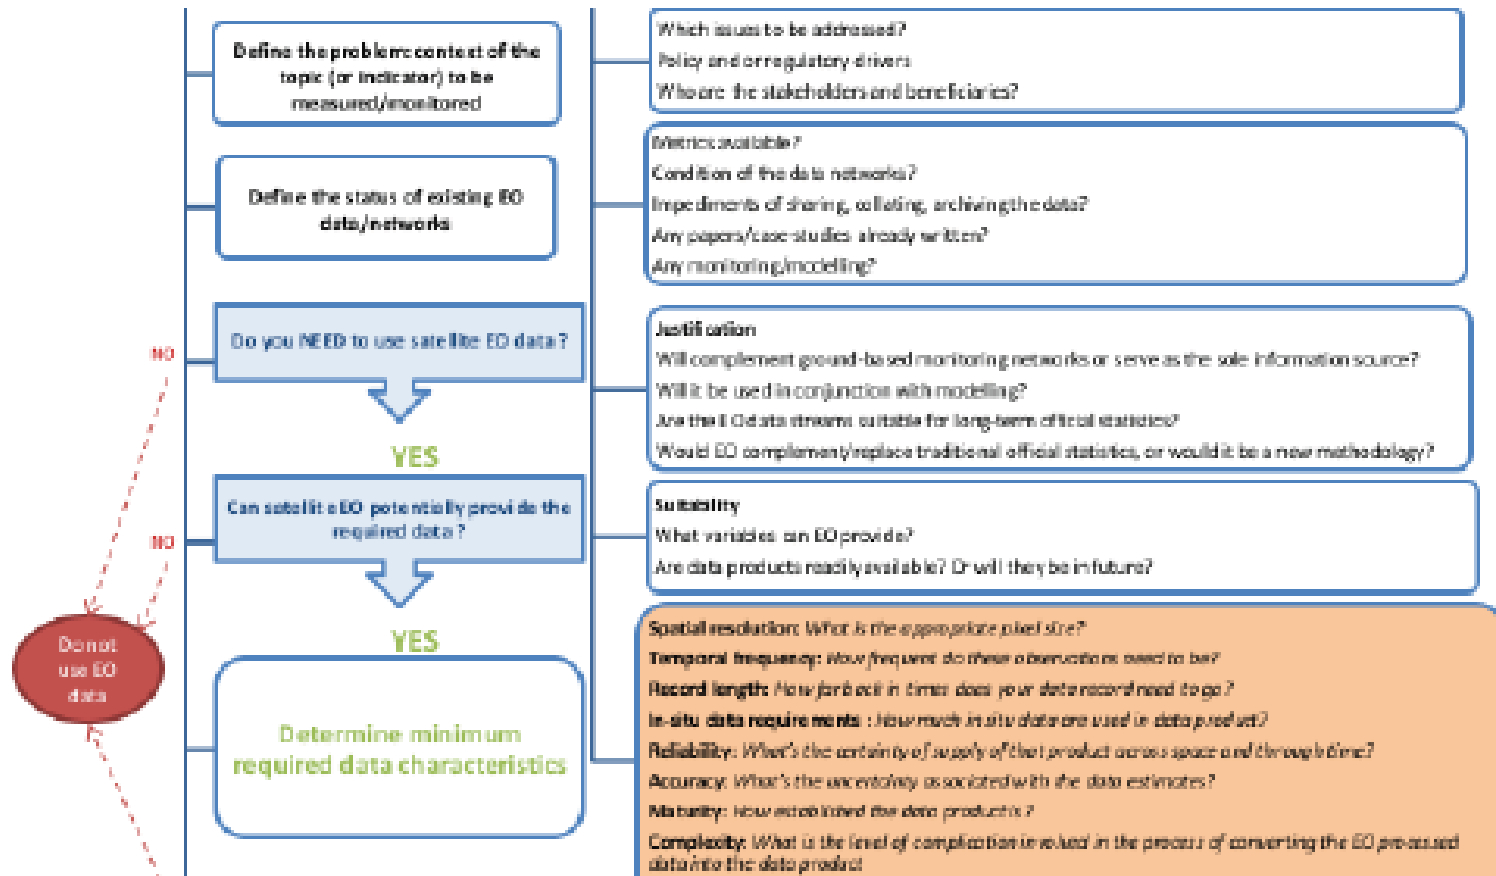

GEO is instrumental in integrating use of Earth observation data into the methodology of measuring and achieving Sustainable Development Goal Indicators.

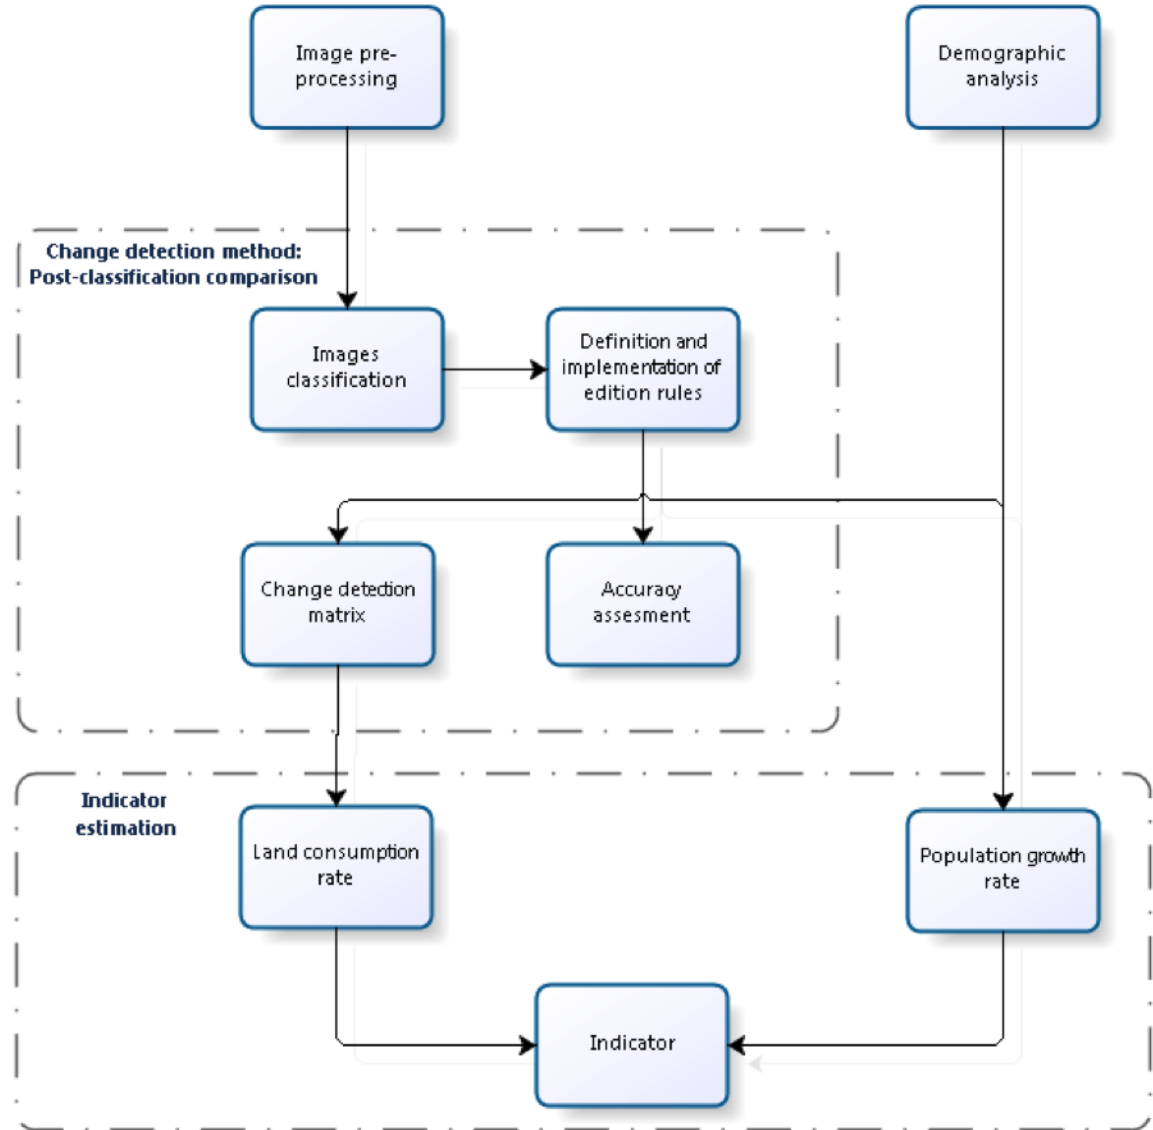

This brochure gives graphic illustration of the types of EO data sets and images available which means decision-makers can not only use data to identify the status they need to report, they can visualize the solution, too.

Decision tree on usage of EO data for National Statistical Organisations

Integration of EO & statistical data to report on SDGs [Indicator 68: Ratio of land consumption & population growth rates]

400m EO data and information resources in GEOSS Portal www.geoportal.org

The screenshot displays the GEOSS Portal interface. At the top, there are navigation menus and logos for GEO Group on Earth Observations and GEOSS Portal. The main content area is divided into two sections: a search results panel on the left and a map on the right.

Search Results Panel:

- Search Results** Number of results: 22545037
- Resource preview not available**
 - Grand atlas du continent africain; 1ère édition**
(Organization: unknown)
Include: Natalité,mortalité (p. 21) - PNB par habitant (1970); répartition mondiale de quelques produits commercialisés (23) - Relief et hydrographie (p. 27) - Géologie (p. 29) - Températures , précipitations, vents et courants (33) (60 000 000) - ...
 - Watersheds**
(Organization: WMS (at <http://ciesin.columbia.edu/geoserver/wms?>)
Dissolved watershed layers for Africa
 - Suitability for commercial fish farming**
(Organization: ISRIC World Soil Information)
Areas with suitability for commercial fish farming development and operation. Map derived from the combined suitability of five land-quality factors important for fish farming development and operation; net annual water requirement for shallow ponds, soil and terrain suitabil ...
Collection start date: 1997-01-0

Map Section:

- Shows a satellite map of Africa with a colorful data overlay (red, yellow, green, blue).
- Includes a legend with the following items:
 - Hide Bounding boxes layer
 - GEONETWORK:comerc_3802
- Navigation controls (zoom, pan, etc.) are visible on the right side of the map.

At the bottom of the search results panel, it indicates "Visible 1-10 of 22545037" with a "next" button. At the bottom right of the page, there are links for "Send Feedback" and "Terms & Conditions".

GEO Observations Blog

News

New Zealand Government thanks ChinaGEOSS, CODATA and IRDR for their help following 2016 Kaikoura Earthquake.

New Zealand was hit by a 7.8 magnitude earthquake in Kaikoura in November 2016, and the government has expressed thanks to [ChinaGEOSS](#), [CODATA](#) and [IRDR](#) for their timely and free provision of satellite data that helped with damage and loss estimation following the disaster.

Damage and loss estimation is often difficult in the hours and days after a natural disaster as data and information are not available. During the Kaikoura earthquake, [IRDR's Disaster Loss DATA project](#) and the [CODATA Task Group Linked Open Data for Global Disaster Risk Research \(LODGD\)](#) worked together with environmental and engineering consultancy [Tonkin +Taylor](#) in New Zealand to provide TripleSat , Jilin-1A and FY satellite images of the affected Hurunui District.

As both the technical manager of ChinaGEOSS Portal and a member of CODATA LODGD Task Group, Professor Li Guoqing organized the above emergency response data sharing activity under the leadership of China GEO Office.
