

**COMMITTEE OF EXPERTS ON THE TRANSPORT OF
DANGEROUS GOODS AND ON THE GLOBALLY
HARMONIZED SYSTEM OF CLASSIFICATION
AND LABELLING OF CHEMICALS**

Sub-Committee of Experts on the
Transport of Dangerous Goods

Twenty-sixth session
Geneva, 29 November-7 December 2004
Item 3 (c) of the agenda

**OUTSTANDING ISSUES OR PROPOSALS OF AMENDMENTS TO THE RECOMMENDATIONS
ON THE TRANSPORT OF DANGEROUS GOODS**

Miscellaneous proposals

Environmentally hazardous substances

Note by the secretariat

1. Reference is made to ST/SG/AC.10/C.3/2004/109.
2. Attached is IMO document BLG/Circ.13 which contains the latest "GESAMP/EHS Composite List of Hazard Profiles".

HAZARD EVALUATION OF SUBSTANCES TRANSPORTED BY SHIPS

GESAMP/EHS Composite List of Hazard Profiles, 2003

Attached hereto for the information of Governments is a latest Composite List of the Hazard Profiles of products transported both in bulk and in packaged form by Ships, 2003¹.

The work related to the evaluation of substances carried by ships started in late 1971, in the course of preparing for the 1973 International Conference on Marine Pollution. After that Conference the Marine Environment Protection Committee (MEPC) recognized that the evaluation of the hazards of substances carried by ships would be a continuous task and requested the assistance of GESAMP, which agreed to consider all shipborne substances with the exception of oils (as defined by Annex I of the International Convention for the Prevention of Pollution from Ships, 1973 and the Protocol of 1978 relating thereto (MARPOL 73/78)) and radioactive substances.

Since 1973 the GESAMP Working Group on the Evaluation of the Hazards of Harmful Substances Carried by Ships (EHS) has continued to evaluate additional substances and also revised the ratings of some of those already evaluated when new information has become available. In so doing, however, EHS took particular note that the hazard profiles had been prepared on the basis of the particular conditions and circumstances in which the substances might be expected to be discharged from ships. The hazard profiles should not, therefore, be used in the control of discharges from other sources, particularly continuous discharges into the sea from stationary outfalls. GESAMP stressed that this limitation should be made clear to users of the hazard profiles.

A comprehensive report containing a detailed description of the evaluation procedure used by the GESAMP Working Group was published in 1990 by IMO under the GESAMP Reports & Studies No 35 (R&S 35) and is available from the IMO Secretariat.

The attached GESAMP Hazard Profiles have been developed in accordance with the criteria described R&S 35.

However, it should be noted that the original hazard evaluation procedure, developed by GESAMP in the early 1970s, has since been reviewed, taking into account new scientific methodologies as well as the Globally Harmonized System for Classification and Labelling of Chemicals (GHS) which resulted from the United Nations Conference on Environment and Development (UNCED) on environmentally sound management of toxic chemicals (Agenda 21, chapter 19).

¹

This attachment is available in English only.

As a result, R&S 35 has been superseded by Reports and Studies number 64 (R&S 64), which includes the new criteria and methodologies now being used to evaluate products transported at sea, which is also available from the IMO Secretariat.

It should be noted that EHS is in the process of finalizing the GESAMP Hazard Profiles of those products transported in bulk by sea and are subject to IMO's International Code for the Construction and Equipment of Ships carrying Dangerous Chemicals in Bulk (IBC). It is anticipated that these Hazard Profiles, which are more comprehensive than those attached, will be made available in 2004.

Any queries concerning the hazard profiles and requests for background information should be addressed to:

Mr J Crayford
IMO Technical Secretary of the GESAMP/EHS Working Group

APPENDIX

ABREVIATED LEGEND TO THE HAZARD PROFILES

Column A - Bioaccumulation and Tainting

- + Bioaccumulated to a significant extent and known to produce a hazard to aquatic life or human health
- Z Bioaccumulated with an attendant risk to aquatic organisms or human health, but with a short retention time of the order of one week or less
- T Liable to produce tainting of seafood
- 0 No evidence to support one of the above ratings (+, Z or T)

Column B - Damage to living resources

	96h LC50 to aquatic organisms
5	Extremely toxic
4	Highly toxic
3	Moderately toxic
2	Slightly toxic
1	Practically non-toxic
0	Non-hazardous
D	Substances likely to blanket the sea-bed
BOD	Substances with an oxygen demand

Column C - Hazard to human health by oral intake

	Oral LD50 to mammals
4	Highly hazardous
3	Moderately hazardous
2	Slightly hazardous
1	Practically non-hazardous
0	Non-hazardous

Column D - Hazard to human health by skin and eye contact or inhalation

- II Hazardous (Severe irritation, strong sensitizer, lung injury, percutaneous toxicity, carcinogenic, or other specific long-term adverse health effects)
- I Slightly hazardous (mild irritation, weak sensitizer)
- 0 Non-hazardous (non-irritant, not a sensitizer)

Column E - Reduction of amenities

- XXX Highly objectionable because of persistency, smell, poisonous or irritant characteristics; as a result, contaminated beaches are liable to be closed; also used when there is clear evidence that the substance is a human carcinogen or that the substance has the potential to produce other serious specific long-term adverse health effects in humans.
- XX Moderately objectionable because of the above characteristics, but short-term effects leading only to temporary interference with the use of beaches; also used when there is credible scientific evidence that the substance is an animal carcinogen but where there is no clear evidence to indicate that the material has caused cancer in humans, or when there is evidence from laboratory studies that the substance could have the potential to produce other serious specific long-term health effects.
- X Slightly objectionable, non-interference with the use of beaches.
- 0 No problem
- Ratings in brackets indicate that insufficient data are available to the GESAMP experts on specific substances and so extrapolation was required.
- N Not applicable (e.g. if gases)
- Indicates that data were not available to the GESAMP Working Group

Note: The descriptive terms such as highly toxic, non-hazardous etc., were used by the original panel for the purposes of the 1973 International Conference on Marine Pollution. They have no particular significance in terms of the hazard posed outside the particular circumstances addressed by that Conference and IMO, i.e. marine pollution as a consequence of discharges or spillages from ships.
