LDWS amendment proposal:

Proposal:

Paragraph 6.6.1., amend to read

6.6.1 Drive the vehicle at a speed of ~~[65km/h] +/- 5 km/h~~ **[60km/h] +5/-0 km/h** into the centre of the test lane in a smooth manner so that the attitude of the vehicle is stable.

Justification:

Since the current tolerance of test speed is too wide objectively, it should be narrowed more appropriately. Besides, the paragraph 5.5.2. requires to activate LDWS at least [60km/h]. Therefore, it is adequate that 60km/h is defined as nominal value for basic test speed instead of 65km/h from the regulation wording point of view.
