

Network Rail and Adaptation

John Dora

Brussels 19th April 2012

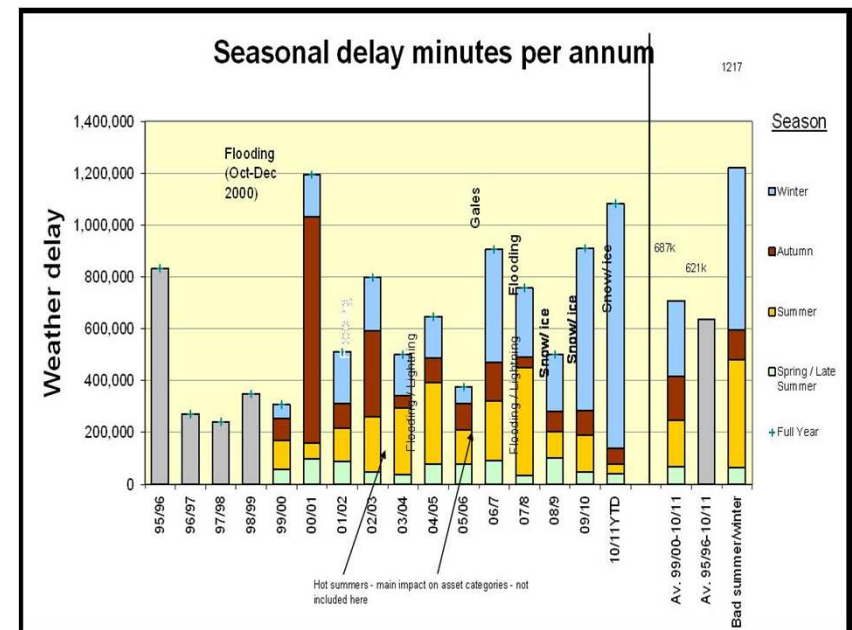

Network Rail in GB

- Network Rail in UK
 - GB Rail Infrastructure owner
 - Regulated
 - 5-year Control Periods
 - 30-year Technical Strategy
 - Many players
 - Complicated interfaces
- Currently working towards CP5 (2014 -2019)

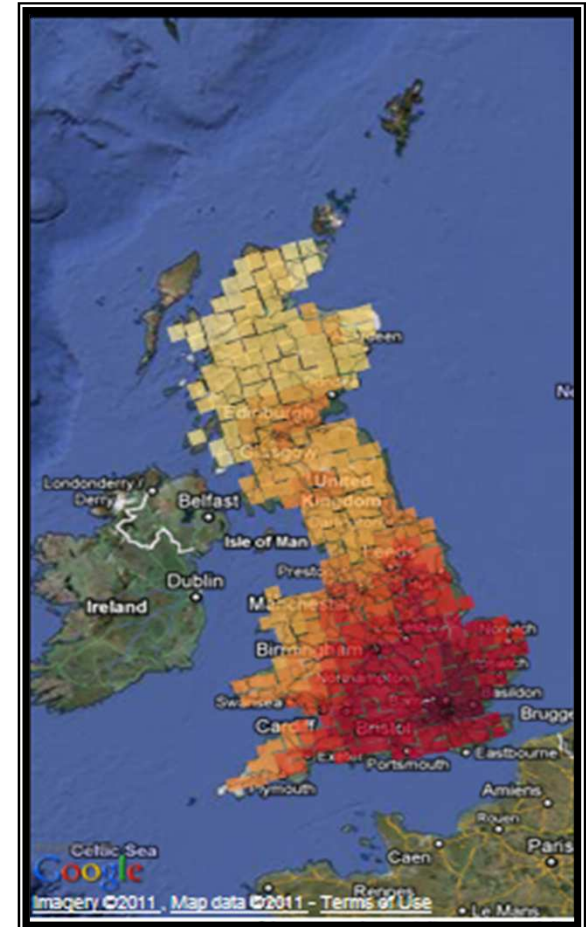

Rail CCA studies - TRaCCA

- ‘Business as usual’ is not an option (2006 Stern Review etc)
- Flooding costs £50M pa – this could be £500M by 2040s
 - Track buckle risk management – c.£40M
- Weather delay budget is 500,000 minutes per year
- TRaCCA initiated - aimed to provide tools and knowledge to improve the reliability of the railway
- Detailed climate impact analyses on selected priorities

What we've learned – some Headlines

- A marked difference in climate north/ south is likely
- Cold winters will become increasingly rare
- Track buckle risks increase
 - Following today's processes means reduced *System Reliability*
 - Major floods become 6x more frequent by 2080s
- Adaptation activity can foster wider benefits
- Asset lifecycle important
 - Adapt at Routine Renewal stage = a low cost high impact strategy

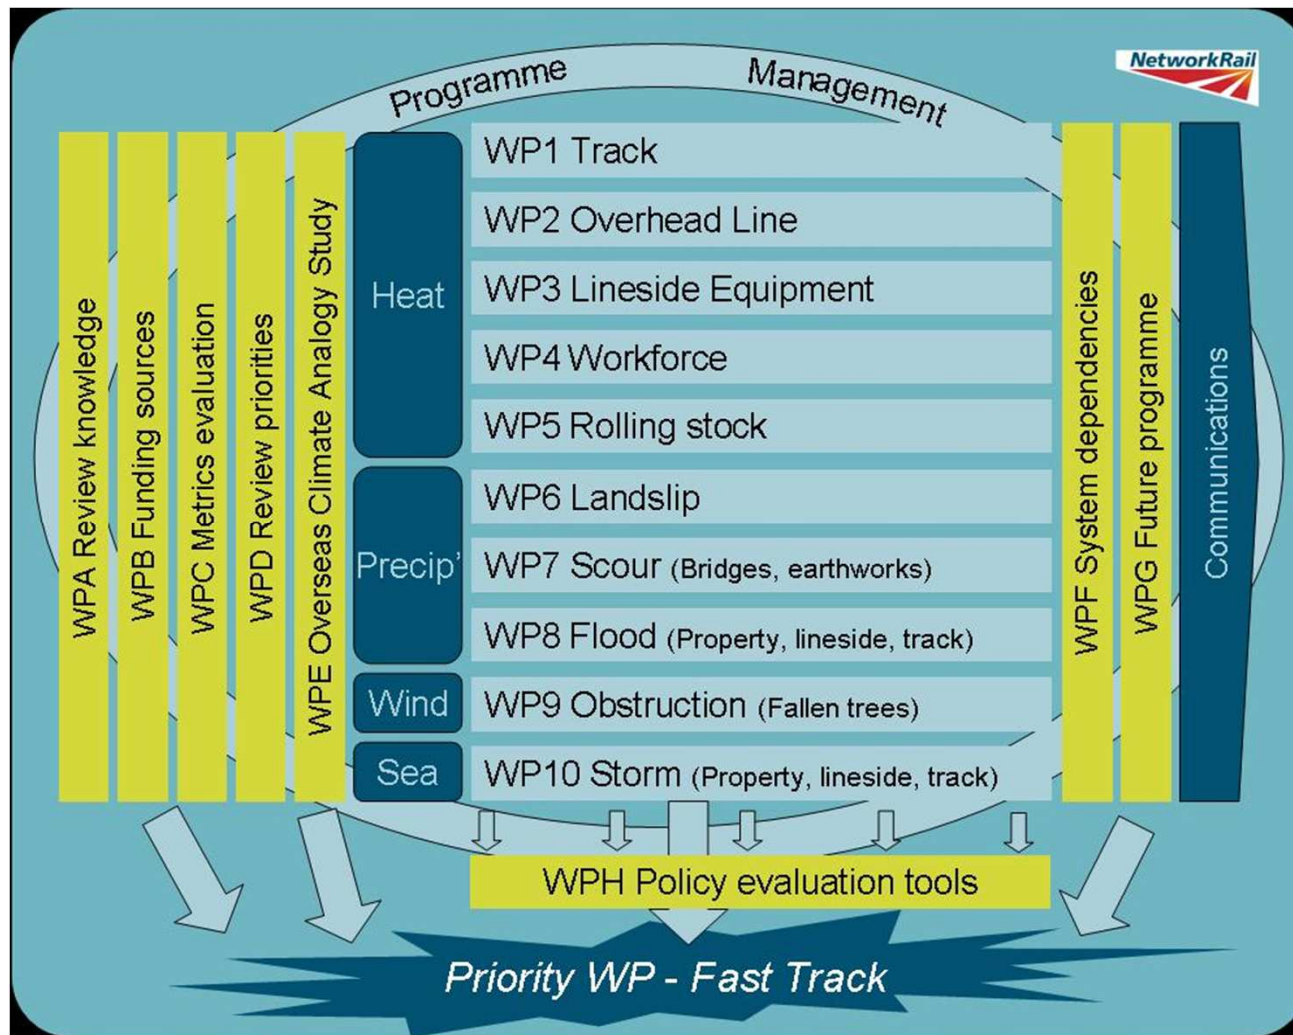

Heat related non-work days – 2040s

Going forward...

- TRaCCA was a defined *project* and has led the way
- Many benefits in being more ambitious:
 - Broader scope (in terms of participation, activities and time, with a *systems approach*)
 - Build on external to Rail Research and Science
 - Improve Railway Asset data/ Invent new metrics
 - ‘Fast-track’ packages to bring early benefits (especially in ‘local weather management’)
 - Bring other countries’ experiences **now** to help show the **future for the UK** and vice-versa

Current proposal

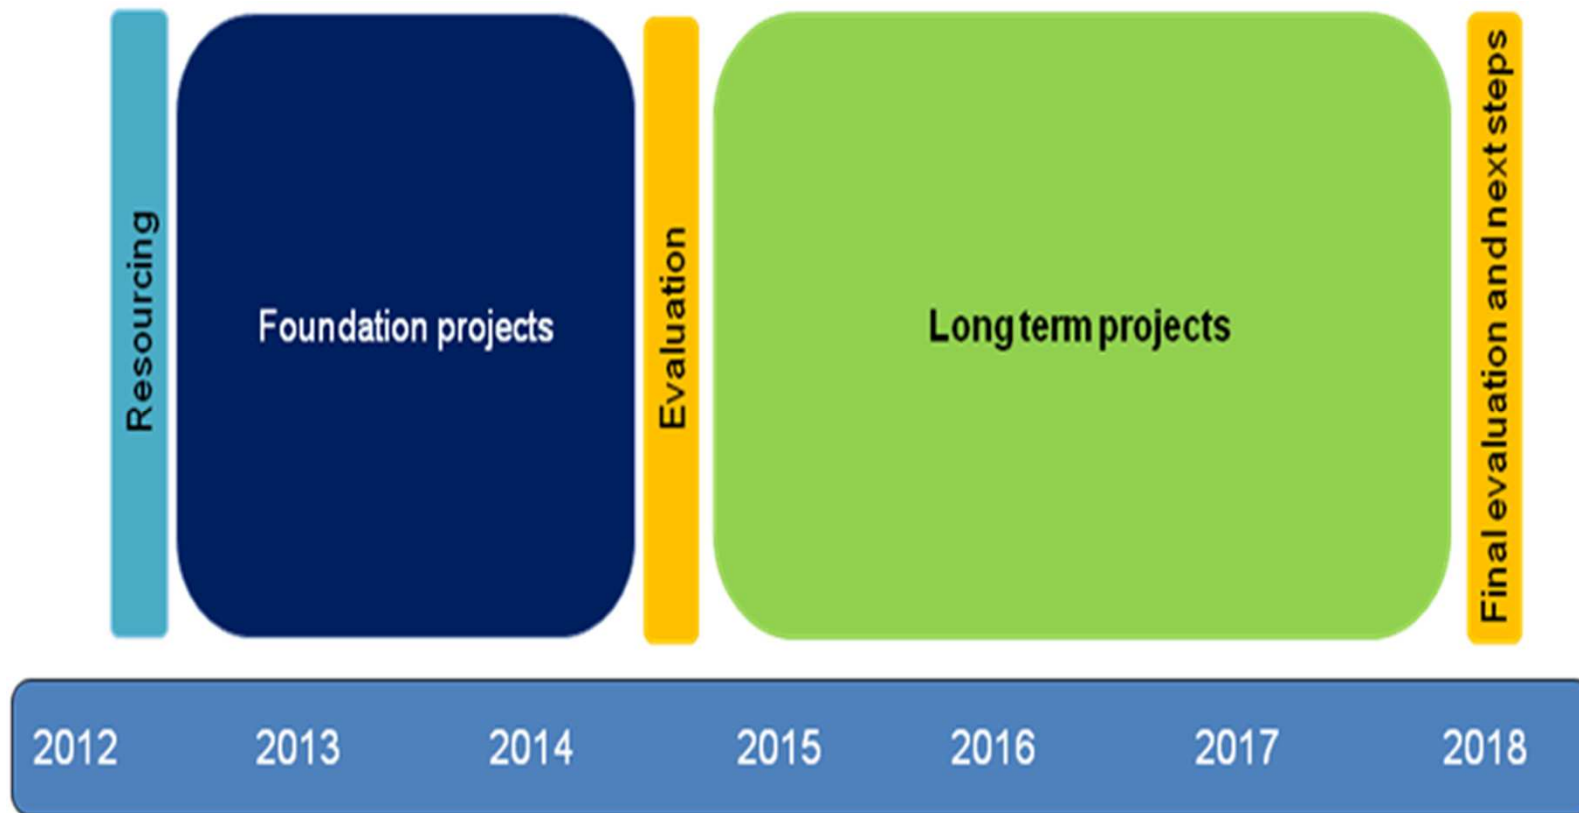

Estimated Cost to Rail: £1.7M for Foundation projects (2 years)

Overall Timeline: 5 Years

Size of problem worth in excess of £4.6Bn over 30 years

Proposed Programme

The proposed work will be sponsored by RSSB's Research Programme – currently this is subject to approval

Project Deliverables include:

2 YEAR FOUNDATION PROJECTS

- **Economics of the benefits of climate change adaptation**
 - Report on economics of the benefits of CCA
- **Overseas analogy study**
 - Comparative report of rail systems currently operating within similar weather thresholds to those predicted for future GB
- **System, Sub-system and Local Decision tools**
 - To aid decision making for long term Policy, medium term Asset investment and local Management operations

Conclusions

- GB Rail has undertaken research into climate change impacts up to the 2040s
- This has identified positive benefits
- Improvements into data and science have been identified
- £1.7M sought to build on TRaCCA work
 - 2 years' Foundation projects within 5 year programme
 - Engage across academia
- Asset lifecycle very important - adapt during routine renewals
- **Multi £Bn 'Prize'**
