

Supplement to ECE/TRANS/WP.29/GRSG/2015/4
(Amendments to UN Regulation No. 43 on Safety glazing)

The Hungarian proposal referred above was discussed on the 108th GRSG session. The German delegate proposed to consider two informal documents – IG/PG-03-14 and IG/PG-05-07 – (prepared by the informal group dealing with plastic glazing) before the final decision.

The Hungarian experts studied in details the two documents, mainly IG/IP-03-14, which is a very precise description of a research (including theoretical and experimental approaches, results of wide range test series, etc.). They found it extremely valuable, including the tests, which compare the HIC values in different situations, circumstances.

However this research is not related to the Hungarian proposal, which simply wants to eliminate a contradiction in UN Regulation No. 43.

In the Justification of the Hungarian proposal this contradiction is clearly expressed by para. 4 and 5
