□ Ice
□ Fog
□ Thunderstorm
□ Storm
Temperature: approx. 13..... °C

5. Description of occurrence
Additional description of occurrence:

For reasons yet to be clarified, the truck and the trailer veered off the carriageway. The trailer separated from the tractor vehicle and tipped over. Apparently, this led to a structural failure of one of the three special containers. As a consequence, hot aluminium leaked onto the carriageway. Due to the high temperature of the aluminium (900°C), small incipient fires developed in connection with the oil concentration of the carriageway’s asphalt layer. The driver, who was unharmed, was able to alert the authorities immediately by interacting with another driver from the same company, who was travelling on the opposite carriageway. Due to the high temperature, it was not possible for the drivers to conduct containment measures. This product does not pose a threat to the environment. The police immediately started closing the motorway while the fire brigade directly began to cool down the two undamaged containers. The truck was not confiscated by the authorities, hence a salvage company was able to remove it from the site. (Update 17 August 2015, 10:05 hrs Truck was confiscated by the police at salvage company’s premises). After consultation with the police, it was possible to unload the two undamaged containers with a separate truck at the manufacturer’s premises. The containments are permitted for use in accordance with Annex 12 of the Guidelines for the application of the Ordinance on the Transport of Dangerous Goods by Road, Rail and Inland Waterways.

Ad 6: UN 3257 elevated temperature liquid, n.o.s., (molten aluminium), 9, III (D)

(1) For dangerous goods assigned to collective entries to which special provision 274 applies, also the technical name shall be indicated.

(2) For Class 7, indicate values according to the criteria in 1.8.5.3.

(3) Indicate the appropriate number

1 Packaging
2 IBC
3 Large packaging
4 Small container
5 Wagon
6 Vehicle
7 Tank-wagon
8 Tank-vehicle
9 Battery-wagon
10 Battery-vehicle
11 Wagon with demountable tanks
12 Demountable tank
13 Large container
14 Tank-container
15 MEGC
16 Portable tank

(4) Indicate the appropriate number

1 Loss
2 Fire
3 Explosion
4 Structural failure

7. Cause of occurrence (if clearly known)

- Technical fault
- Faulty load securing
- Operational cause (rail operation)
- Other: currently not known

□ Technical fault
□ Faulty load securing

## 8. Consequences of occurrence

### Personal injury in connection with the dangerous goods involved:
- □ Deaths (number: ......)
- □ Injured (number: ......)

### Loss of product:
- □ Yes
- □ No
- □ Imminent risk of loss of product

### Material/Environmental damage:
- □ Estimated level of damage ≤ 50,000 Euros
- □ Yes
- □ Estimated level of damage > 50,000 Euros

### Involvement of authorities:
- □ Yes
  - □ Evacuation of persons for a duration of at least three hours caused by the dangerous goods involved
  - □ Yes
  - □ Closure of public traffic routes for a duration of at least three hours caused by the dangerous goods involved
- □ No

If necessary, the competent authority may request further relevant information.
### Annex II

**Notification of occurrence involving dangerous goods (ID 61)**

| 1. Mode          |  
|------------------|------------------|
| Rail            | ☐              |

|----------------------------------|------------------|
| ☐ Rain | ☐ Snow |
| ☐ Ice | ☐ Fog |
| ☐ Thunderstorm | ☐ Storm |
| Temperature:….. °C |  |

| 5. Description of occurrence |  
|------------------|------------------|

While unloading, it was noted that two packages were damaged, out of which silver balls were rolling. These two packages were put in a trough at the forecourt of the hangar and emergency services were called. The fire brigade isolated the packages properly for storage in transit in an available swap body. After the Office for Occupational Safety and Health (Amt für Arbeitsschutz) had released the packages, they were transported to the company Remondis for proper disposal.
