

Transportation Research Board 97th Annual Meeting

January 7–11, 2018 • Washington, D.C.

NHTSA / ITF-IRTAD – Analysis of International Road Safety data

Developing a Global Road Safety Model

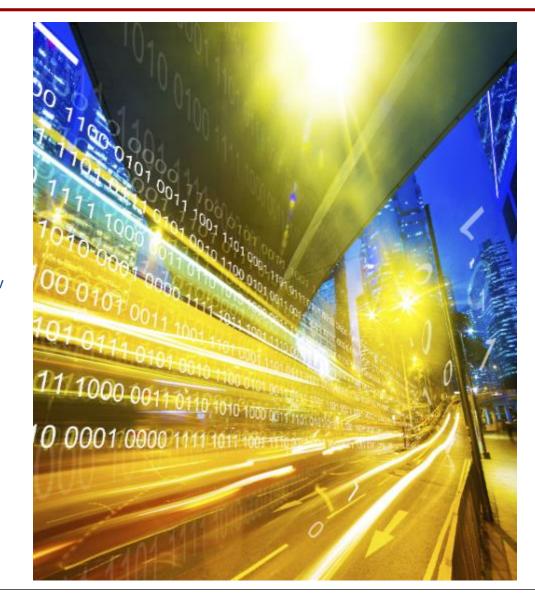

George Yannis¹, Eleonora Papadimitriou¹, Katerina Folla¹ Nenad Nikolic², Eva Molnar²

¹Department of Transportation Planning and Engineering, NTUA, Greece ²UN Economic Commission for Europe, Sustainable Transport Division, Switzerland

Background

- Road accidents constitute a major social problem in modern societies, with road traffic injuries being estimated as the eighth leading cause death globally.
- Particularly in low and middle income countries, road traffic injuries are twice those in high income countries and still increasing.
- UN Decade of Action: need to strengthen global and national efforts for casualty reduction through evidence-based approaches.

Objective

- To develop a macroscopic road safety decision making tool that will assist governments and decision makers, both in developed and developing countries, to decide on the most appropriate road safety policies and measures in order to achieve tangible results.
- Based on work carried out in the framework of the "Safe Future Inland Transport Systems (SafeFITS)" project of the United Nations Economic Commission for Europe (UNECE), financed by the International Road Union (IRU).

Conceptual Framework

Based on the five pillars of WHO Global Plan of Action (WHO, 2011) and an improved version of the SUNflower pyramid (2002):

SafeFITS layers

- 1. Economy and Management
- 2. Transport Demand and Exposure
- 3. Road Safety Measures
- 4. Road Safety Performance Indicators
- 5. Fatalities and Injuries

SafeFITS pillars

- 1. Road Safety Management
- 2. Road Infrastructure
- 3. Vehicle
- 4. User
- 5. Post-Crash Services

		PILLARS				
		Road Safety Management	2. Road Infrastructure	3. Vehicle	4. User	5. Post-Crash Services
LAYERS	1. Economy & Management	Economic Deve- lopments, Strategy & Targets, Regu- latory framework (compliance with UN regulations)	Existence of motorways, of non-paved roads, of road tunnels, Existence of guidelines (for design, RSA etc.), Legislation on speeding	Number of regi- stered vehicles, Vehicle age, Technical inspe- ction legislation (maintenance, roadworthiness, overweight, ADR)	Requirements & regulations on drivers' licensing, Drivers' training, Medical exams of drivers, Legislation on alcohol / use of seatbeits / use of helmets	Trauma management sector level of development Number of hospitals / doctor / Intensive Care (IC) beds per population
	Transport demand & exposure	Transport Modal Split (road/rail, passenger/freight, private/public), Share of urban areas, Weather conditions	Exposure with regard to road type, Length of road per road type, Share of Motorway length out of the total road network, Number of railway level crossings	Exposure with regard to vehicle type, Share of PTW, HGV / carriage of dangerous goods vehicles in the vehicle fleet	Exposure with regard to age & gender	
	3. Road Safety Measures	Assessment of measures, Data collection & analysis, International comparisons, Vehicle taxation, Road pricing	Treatment of High Risk Sites, Road Safety Audits, Turnel Road Safety Manage- ment, Improve- ment of signage, Installation of road restraint systems, Lighting, Speed limits in urban areas/Traffic Calming	Renewal rate of vehicle fleet, Measures for second-hand vehicles, Vehicle related roadside controls, Automated driving	Enforcement, campaigns, Road safety education, Training	e-call, First aid training, Existenc & organisation of trauma centers
	Road Safety Performance Indicators	Safety targets, stakeholders' involvement, detail of analysis for intervention selection, economic evaluation	Number of RSAs conducted, Percentage of High Risk Sites treated	Global NCAP score, Mean age of the vehicle fleet per vehicle type, Existence of safety equipment, e-safety	Speeding / Drink & drive infringe- ments, Seatbets use, Helmets use, Driver distraction, Driver fatigue	Emergency response time, Type of field treatment, Speed of treatment in hospital, Number of ambulances pe population, Number of good samaritanians pe population
	5. Fatalities & Injuries	Fatalities / injuries per million inhabitants, fatalities / injuries per million passenger cars, fatalities / injuries per 10 billion passenger-km	Fatalities / injuries in motorways, in 2-lane rural roads, in urban roads	Share of motorcycle fatalities out of the total fatalities	Share of pedestrian / bicyclist / motorcyclist fatalities out of the total fatalities, drink-driving related fatalities	Death rate, Hospitalization in IC Unit, Total length of hospitalization

Architecture of the Database

- Data from the five layers and the five pillars
- International databases explored: WHO, UN, IRF, OECD, etc.
- Data for 130 countries with population higher than 2,8 million inhabitants
- Data refer to 2013 or latest available year

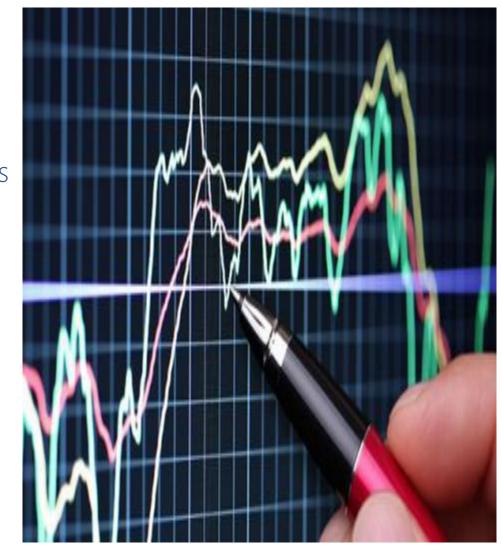

Economy and Management

Demographic and Economic Characteristics

- Population (World Bank Database)
- Area (World Bank Database)
- GNI per capita in US dollars (World Bank Database)
- Projected GDP per capita for 2015-2030 in 2010 US dollars (ERS International Macroeconomic Data Set)

Road Safety Management Indicators (WHO)

- Existence of RS lead agency
- The lead agency is funded
- Existence of national RS strategy
- The RS strategy is funded
- Existence of RS fatality targets

Transport Demand and Exposure

Roads

- Road network density (IRF)
- Percentage of motorways (IRF)
- Percentage of paved roads (IRF, CIA)

Vehicles (IRF)

Number of vehicles in use in total and by type of vehicle

Traffic (IRF)

- Traffic Volume
- Inland surface passengers transport
- Inland surface freight transport

Road Safety Measures (1/2)

Roads (WHO)

- Road safety audits on new roads
- Existence of speed law
- Max speed limits on urban roads (no speed limits; >50 km/h; ≤50 km/h)
- Max speed limits on rural roads (no speed limits; 100-120 km/h; 70-90 km/h; ≤70 km/h)
- Max speed limits on motorways (no speed limits; ≤100 km/h; 100-120 km/h; ≥120 km/h)

<u>Vehicles</u>

- Existence of ADR law (UNECE)
- Vehicle standards include seat-belts, electronic stability control, pedestrian protection (WHO)
- New cars subjected to NCAP (WHO)

Post-crash care (WHO)

- Training in emergency medicine for doctors
- Training in emergency training for nurses

Road Safety Measures (2/2)

Road User (WHO)

- Existence of drink-driving law
- Allowed **BAC limits** (3 separate variables for general population, young/novice drivers, commercial drivers)
- Existence of national seat-belt law
- The seat-belt law applies to all occupants
- Existence of national child restraint law
- Existence of national helmet law
- The law requires helmet to be fastened
- The helmet law defines specific helmet standards
- Existence of national law on **mobile phone use** while driving
- The law applies to hand-held phones
- The law applies to hands-free phones
- Existence of penalty point system

Road Safety Performance Indicators

<u>Traffic law enforcement</u> (WHO)

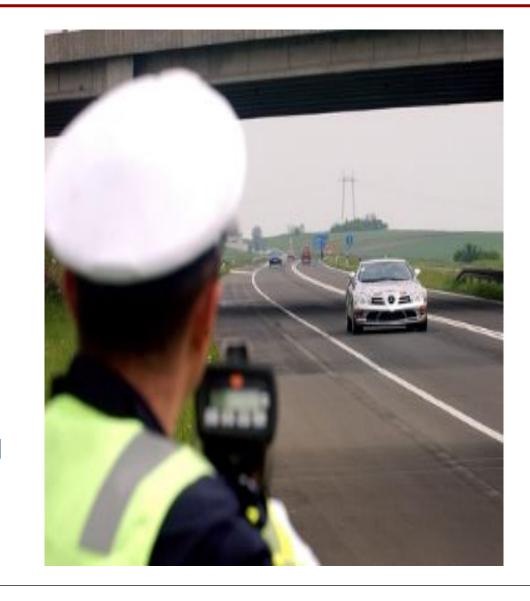

- Assessment of effectiveness of **seat-belt law** enforcement
- Assessment of effectiveness of **drink-driving law** enforcement
- Assessment of effectiveness of **speed law** enforcement
- Assessment of effectiveness of **helmet law** enforcement

Road User (WHO)

- Seat-belt wearing rates in front seats
- Seat-belt wearing rates in rear seats
- Helmet wearing rates driver

Post-crash care

- Estimated percentage of **seriously injured patients** transported by ambulance (WHO)
- Number of hospital beds per population (World Bank Database)

Fatalities and Injuries

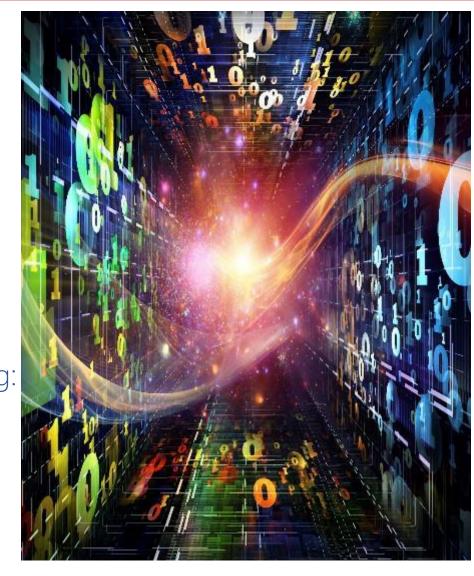

- Estimated number of road traffic fatalities (WHO)
- Estimated road traffic fatality rates per 100.000 population (WHO)
- Distribution of road traffic fatalities by road user type (WHO)
- Distribution of road traffic fatalities by gender (WHO)
- Percentage of road traffic fatalities attributed to alcohol (WHO)

Database Overview

- Wherever data for 2013 were not available, the **latest data** available were used.
- The missing values of each indicator of the countries were filled with **the mean value** of the indicator in their regions.
- The respective information of each variable is **properly** represented in the database for the statistical process.
- Data for most variables were available for almost all countries.
- Low data availability is observed for few variables regarding:
 - the restraint use rates
 - the percentage of fatalities attributed to alcohol
 - the distribution of fatalities by road user type
 - transport demand and exposure indicators

Data Analysis Methodology

- Two-step approach of statistical modeling:
 - Estimation of composite variables (factor analysis) in order to take into account as many indicators as possible of each layer
 - Correlating road safety outcomes with indicators through composite variables by developing a regression model with explicit consideration of the time dimension
- Model specification

Log(Fatalities per Population)_{ti} = A_i + Log(Fatalities per Population)_(t-\tau) + B_i * GDP_{ti} + K_i * [Economy & Management]_{ti} + Li * [Transport demand & Exposure]_{ti} + M_i * [Road Safety Measures]_{ti} + N_i * [RSPI]_{ti} + ε_i

Where [Composite Variable]

Calculation of composite variables – Economy and Management

[Comp_EM] = -0.250 (EM2_lt15yo) + 0.229 (EM3_gt65yo) + 0.228 (EM4_UrbanPop) + 0.224 (EM7_NationalStrategy) + 0.221 (EM8_NationalStrategyFunded) + 0.222 (EM9_FatalityTargets)

Indicator loadings and coefficients on the estimated factor (composite variable) on Economy and Management

	Component		
	Loadings	Score coefficients	
EM1_Popdensity	,091	,029	
EM2_lt15yo	-,778	-,250	
EM3_gt65yo	,714	,229	
EM4_UrbanPop	,709	,228	
EM5_LeadAgency	,284	,091	
EM6_LeadAgencyFunded	,226	,073	
EM7_NationalStrategy	,697	,224	
EM8_NationalStrategyFunded	,626	,201	
EM9_FatalityTargets	,692	,222	

Calculation of composite variables – Transport Demand and Exposure

[[Comp_TE] = 0.161 (TE1_RoadNetworkDensity) + 0.149 (TE2_Motorways) + 0.238 (TE3_PavedRoads) + 0.272 (TE4_VehiclesPerPop) + 0.267 (TE5_PassCars) - 0.221 (TE7_PTW) - 0.117 (TE10_PassengerFreight)

Indicator loadings and coefficients on the estimated factor (composite variable) on Transport Demand and Exposure

	Component		
	Loadings	Score coefficients	
TE1_RoadNetworkDensity	,497	,161	
TE2_Motorways	,460	,149

Calculation of composite variables - SPIs

[Comp_PI] = 0.144 (PI1_SeatBeltLaw_enf) + 0.155 (PI2_DrinkDrivingLaw_enf) + 0.152 (PI3_SpeedLaw_enf) + 0.160 (PI4_HelmetLaw_enf) + 0.155 (PI5_SeatBelt_rates_front) + 0.146 (PI6_SeatBelt_rates_rear) + 0.150 (PI7_Helmet_rates_driver) + 0.127 (PI8_SI_ambulance) + 0.116 (PI9_HospitalBeds)

Indicator loadings and coefficients on the estimated factor (composite variable) on SPIs

	Component			
	Loadings	Score coefficients		
PI1_SeatBeltLaw_enf	,756	,144		
PI2_DrinkDrivingLaw_enf	,812	,155		
PI3_SpeedLaw_enf	,795	,152		
PI4_HelmetLaw_enf	,837	,160		
PI5_SeatBelt_rates_front	,811	,155		
PI6_SeatBelt_rates_rear	,766	,146		
PI7_Helmet_rates_driver	,784	,150		
PI8_SI_ambulance	,667	,127		
PI9_HospitalBeds	,607	,116		

Final Statistical Model

The **optimal performing model** for the purposes of SafeFITS

- Dependent variable is the logarithm of the fatality rate per population for 2013
- The main explanatory variables are the respective logarithm of fatality rate in 2010 and the respective logarithm of GNI per capita for 2013
- Four **composite** variables: the economy & management, the transport demand and exposure, the measures, and the SPIs

			95% Confidence Interval		Hypothesis Test		
Parameter	В	Std. Error	Lower	Upper	Wald Chi- Square	df	p-value
(Intercept)	1,694	,2737	1,157	2,230	38,291	1	<,001
Comp_ME	-,135	,0646	-,261	-,008	4,358	1	,037
Comp_TE	-,007	,0028	-,013	-,002	7,230	1	,007
Comp_PI	-,007	,0030	-,013	-,001	5,652	1	,017
Comp_EM	,007	,0051	-,003	,017	2,009	1	,156
LNFestim_2010	,769	,0462	,678	,859	276,322	1	<,001
LNGNI_2013	-,091	,0314	-,153	-,030	8,402	1	,004
(Scale)	,038						
Likelihood Ratio	1379,00						
df	6						
p-value	<,001						

Statistical Model Assessment

In order to assess the model, a comparison of the observed and the predicted values was carried out:

- The mean absolute prediction error is estimated at 2.7 fatalities per population, whereas the mean percentage prediction error is estimated at 15% of the observed value.
- The model is of very satisfactory performance as regards the good performing countries (low fatality rate) and of quite satisfactory performance as regards the medium performing countries.

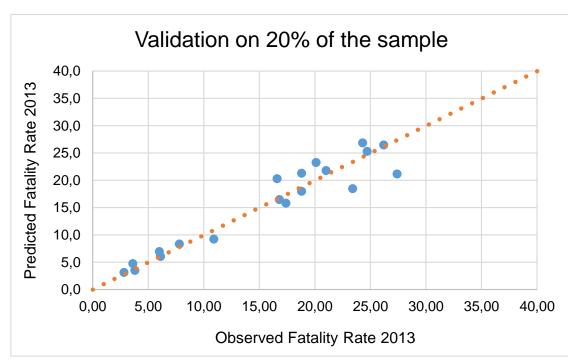

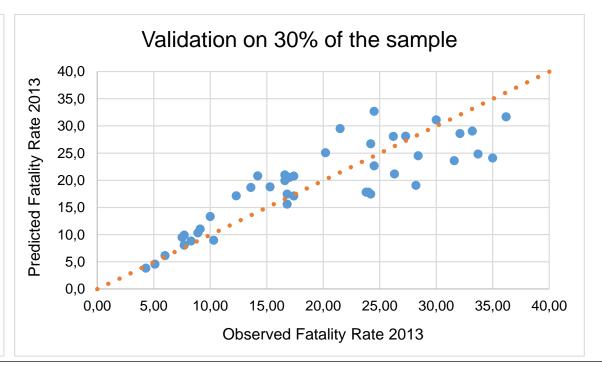

Statistical Model Validation

In order to validate the model, a cross-validation was carried out with two subsets:

- 80% of the sample was used to develop (fit) the model, and then the model was implemented to predict the fatality rate for 2013 of the 20% of the sample not used
- 70% of the sample was used to develop (fit) the model, and then the model was implemented to predict the fatality rate for 2013 of the 30% of the sample not used

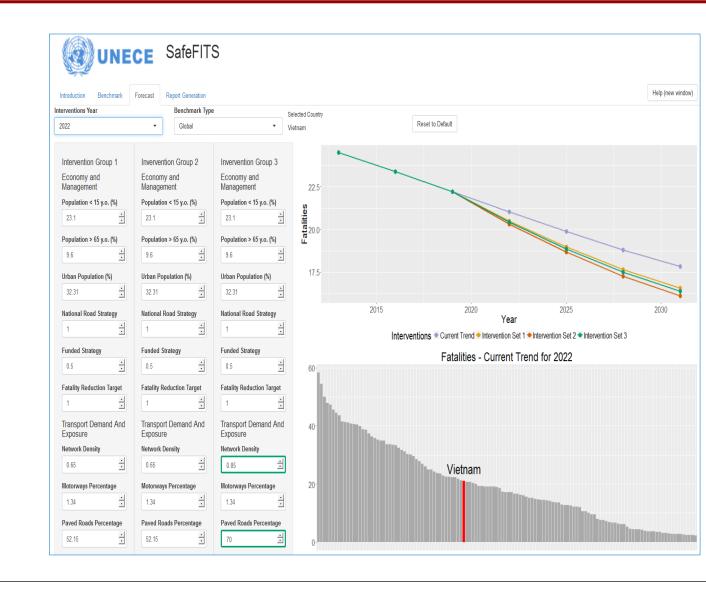

SafeFITS Model Demonstration

The overall model implementation includes 3 distinct steps:

- Step 1 Countries Benchmark
- Step 2 Forecast with no new interventions
- Step 3 Forecast with interventions

Model limitations and future improvements

- The SafeFITS model was developed on the basis of the most recent and good quality data available internationally, and by means of rigorous statistical methods. However, data and analysis methods always have some limitations.
- Data are primarily directed at vehicle occupants and thus, effects on road safety outcomes of VRUs may not be captured.
- The effects of interventions may not reflect the unique contribution of each separate intervention. It is strongly recommended to **test combinations of "similar" interventions** (e.g. several vehicle standards, several types of enforcement or safety equipment use rates etc.)
- The factor analysis procedure does not assume or indicate that a direct causal relationship exists.
- The calibration with new data will be the ultimate way to fully assess the performance of the model.

Benefits for the Policy Makers

- The first global road safety model to be used for policy support
 - Global assessments (i.e. monitoring the global progress towards the UN road safety targets)
 - Individual country assessments of various policy scenarios
- A framework which enhances the understanding of road safety causalities, as well as of the related difficulties.
- Full exploitation of the currently available global data, and use of rigorous analysis techniques, to serve key purposes in road safety policy analysis: benchmarking, forecasting and intervention testing.
- An important step for monitoring, evidence-base and systems approach to be integrated in decision-making.
