Tests for oxidizing liquids (UN Test O.2) and oxidizing solids (UN Tests O.1 and O.3) - see document ST/SG/AC.10/C.3/2018/35 – ST/SG/AC.10/C.4/2018/8 on further work needed

Transmitted by the expert from France

1. During the current biennium 2017-2018 work was done under the approved programme of work by the Committee. This work aimed to tackle the issues consecutive to the replacement of the reference cellulose in UN Tests O.1, O.2 and O.3. It led to proposals made in document ST/SG/AC.10/C.3/2018/35 – ST/SG/AC.10/C.4/2018/8.

2. Nevertheless, a series of additional issues that need to be addressed were highlighted during the collaborative work between the laboratories that participated to the different Round Robin Testing exercises.

3. At least, the following issues were identified:
   (a) Clarification on how to take into account the particle size of a solid sample
   (b) Clarification on how to deal with coated materials
   (c) Prescription for power measurement for the ignition wire in UN Test O.2
   (d) Improvement needed for the wording of the test descriptions

4. France invites all delegates to identify additional issues and suggests collecting the comments within this frame to prepare a working document for the next session in preparation of the programme of work of the Sub-Committees for 2019-2020.
