Recommendations from the Academic Expertgroup regarding a second Decade of Action for Global Road Safety

The secretariat of the Academic Expert Group for the 3rd Global Ministerial Conference on Road Safety 2020 (AEG) hereby submit its recommendations regarding a second Decade of Action for Global Road Safety. The recommendations are related to the following part of the scope for the AEG:

- *What processes and tools could be further developed or added to make actions even more effective and which sectors of the society could be further stimulated to contribute to the overall results?*
- *How can trade, occupational safety, standards, corporate behavior and other aspects of the modern society link in with road safety?*
- *How can nations, local authorities and governments as well as public and private enterprises, in particular major enterprises, be stimulated to contribute to road safety through their own operations?*
- *How can other important challenges, in particular those targeted in Agenda 2030, contribute to improve road safety, and vice versa?*
