Innovation policy in the Republic of Kazakhstan

The technological policy of the state is a set of measures for the creation, adaptation and distribution of new technologies in the production, which leads to the appearance of new products on the market, the growth of the production efficiency of enterprises.

The main goal of these policies is the introduction of new technologies and innovations. In the modern world, the company's ability to technological innovations is becoming the main source of its competitiveness.

Innovation policy is a system of measures aimed at promoting and ensuring innovation in production. It is derived from industrial and technological policy, is built depending on their goals and involves the development of measures that stimulate innovative activity.

Innovation policy for sustainable development principles

01

Strategy - "Kazakhstan 2050" New political course of the successful state "

02

Five institutional reforms - "100 precise steps"

03

State program of industrial-innovative development 2020-2025

04

Business Road Map 2020-2025
