

Single Window Conference

Debate session: key challenges and fundamental requirements

Issues to discuss:

- What are the reasons preventing Legally Significant Data Exchange?
- Is there a reason that a 'document' must be presented in its integrity (i.e. a convention)?
- What measures on international and national levels should be taken to move Supporting Documents to Legally Significant Data Exchange?
- Are there other than the classical UNECE Rec.33 approach to Single Window? What are these and how are they incompatible with the UNECE approach/definition?
