Case study: The Maritime Single Window in Belgium

Project implementation

26-04-2016

WHERE DOES IT APPLY?

CONCEPTUAL ANALYSIS OF THE PROJECT

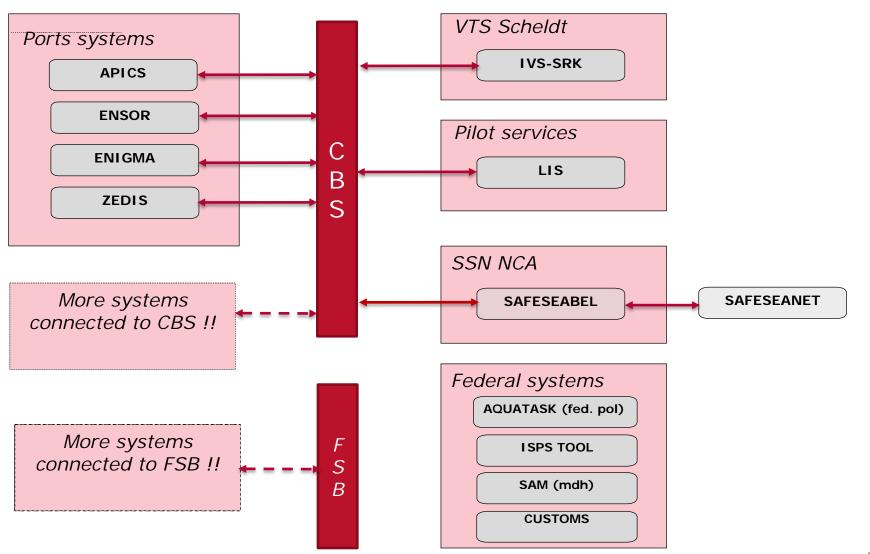

- Responsible department: Federal department of Mobility & Transport (FOD Mob)
- Study of the FOD Mob in 2013/2014 with analysis of different possibilities
- preference to create a new, big, holistic system that will serve as the Maritime Single Window for all Belgian ports.

versus

- The opinion of the ports to make use of all the existing components and port (community) systems because there was already a lot "in place":
 - the Port systems
 - a Central Broker System (CBS) between Flemish and Dutch authorities for safe & secure navigation on the river Scheldt (nautical processes)
 - a Federal Service Bus (FSB) for information exchange between federal entities
- Ports raised questions about available time, resources and budget on federal level to realise the proposed project by the federal department

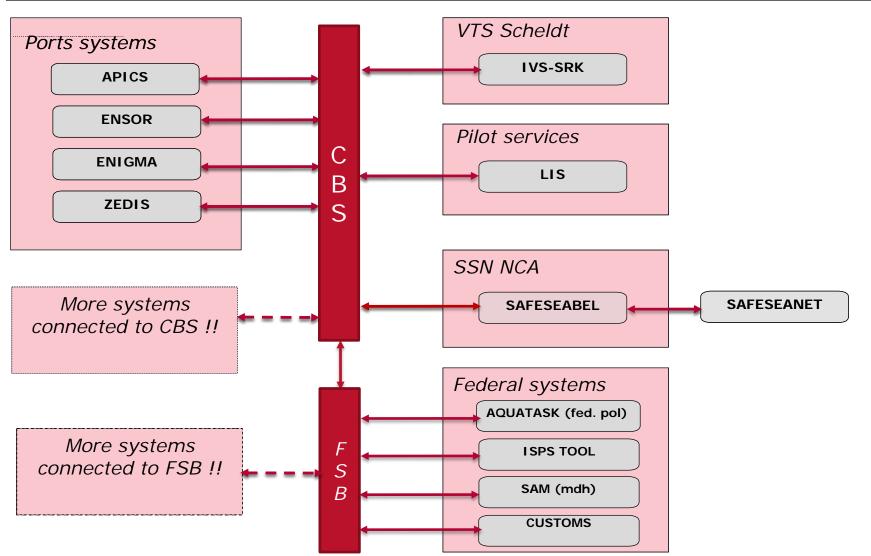

EXISTING COMPONENTS

THE NEW MSW

DECLARATIONS

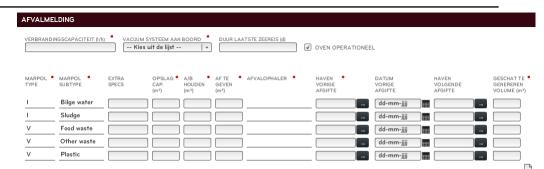

formalities from international legal instruments	reporting formalities resulting from legal acts of the union	any relevant national legislation			
FAL form 1: general declaration (Arrival Notification)	ships arrival/ departure (monitoring directive)	72 hour pre-arrival			
FAL form 2: cargo declaration	border checks on persons (Shengen)	ATA + ATD			
FAL form 3: ship's stores declaration	notification of DPG (monitoring directive)				
FAL form 4: crew's effects declaration	notification of waste and residues				
FAL form 5: crew list	notification of security info (ISPS)				
FAL form 6: passenger list	entry summary declaration (customs)				
FAL form 7: dangerous goods					
maritime declaration of health					

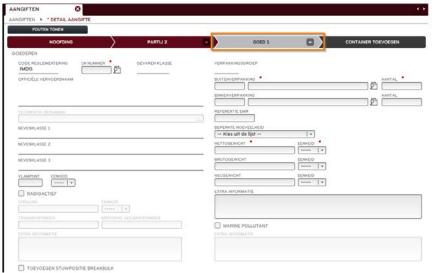

KEEP EXISTING DECLARATIONS

149,35 17,33

Notification of waste and residues

Declaration of dangerous goods

SOME NEW DECLARATIONS

FEEDBACK FROM AUTHORITIES

- Although not literally mentioned in the directive ...
- Implemented as part of the Port Community System, for servicing the ship's agents with additional feedback concerning the status of different declarations

SOME ADDITIONAL PORTS

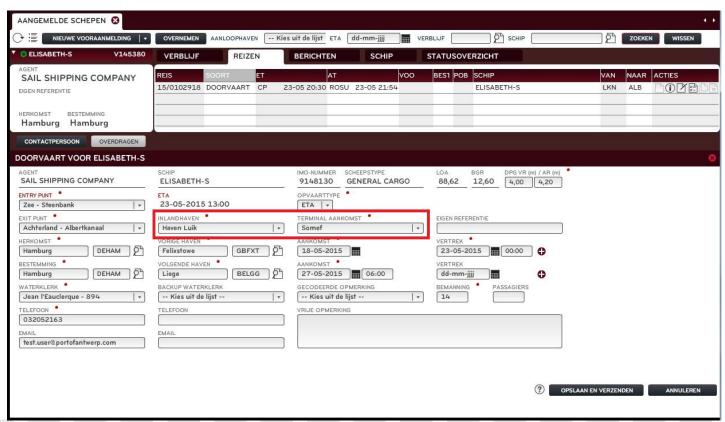

INTEGRATED IN THE PCS

- Ships passing the Port of Antwerp
 - Through the locks, going to the Albert Canal until Liège
 - Passing the port, going to the Upper-Scheldt, the Canal Brussels-Scheldt or the port of Brussels

CONCLUSIONS

The advantages of the chosen solution and implementation were obvious :

- Ship's agent keeps his familiar, operational user interface for extra administrative tasks and processes, the same look and feel for the end-users
 Same UX!, no use of new applications.
- The most quickest implementation (study in 2014, directive 2010/65 as of June 1st 2015), with familiar development stacks in all port development departments
- The most cheapest solution
- No duplication (in a central, federal application) of existing functionalities already present in the port systems

DID WE REACH THE OBJECTIVES?

• The creation of a Single Window in the Member State

All declarations via the Single Window in an electronical way

• Each element should be reported only once

Administrative simplification

→ perception that "passing on paper forms" by means of external delivery services is less work than input into own/external systems (difference with hidden costs)

Harmonisation

→ where is the european level for the end-users (carriers and ship's agents)?

FUTURE WORK

The MSW, c.q. the "EU-regulation", is implemented... but the work is not done (yet)!

- Implementing the directive 2010/65 in Belgium was already a (small) step in electronical, administrative simplification ...
- but it is no 'giant leap' yet!
- Future work can still be done:
 - more Belgian authorities should give their statuses and feedback on received declarations (although not literally mentioned in the EU-directive)
 - information can be exchanged between
 - » ports within Belgium
 - » ports within different EU-countries
 - more european harmonisation (carriers and ship's agents operate in more than one EU-country)
