ECONOMIC COMMISSION FOR EUROPE

Annual Report covering the period from 24 February 2006 to 27 April 2007

INTRODUCTION

1. The present Annual Report was adopted unanimously by the Economic Commission for Europe (UNECE) at the fifth meeting of its sixty-second session on 27 April 2007.

CHAPTER I

ISSUES FOR THE ATTENTION OF THE ECONOMIC AND SOCIAL COUNCIL

2. On 26 April, ECE member States adopted a Declaration for the sixtieth anniversary of the United Nations Economic Commission for Europe, as contained in Annex I. The Declaration acknowledged achievements by the Economic Commission for Europe over the past 60 years in fostering cooperation and integration and reaffirmed the commitment of ECE member States to support and strengthen the effective implementation of the organization's mandate and to ensure its continued substantive relevance, greater visibility and improved transparency.

3. The Declaration affirmed that the ECE can substantially contribute to addressing the challenges of the ECE region by:

- further exercising its role as a multilateral platform, by, as an integral part of the United Nations;
- continuing to bring the development and environmental goals agreed by the international community down to the regional level, and supporting their implementation with the involvement of relevant actors;
- contributing to increasing coherence of the United Nations development work at the regional level, in close cooperation with other entities of the United Nations family;
- ensuring that the Economic Commission for Europe's work is rooted in its sectoral committees;
- continuing to provide a forum for open dialogue among member States and other stakeholders within the areas of its competence;
- assisting countries to implement its intergovernmental outcomes through sectoral activities and technical cooperation;
- supporting regional and sub regional integration processes in their endeavours;
- and by further implementing the United Nations' global mandate on gender equality by promoting the economics of gender as a factor of sustained growth.

4. In conclusion the Declaration underlined that the Economic Commission for Europe is well placed within Pan-European and Transatlantic architecture to continue to address transboundary issues, promote prosperity and contribute to building a common regional economic space, and committed the renewed support of ECE member States to a re-invigorated organization as a major forum to meet effectively the changing needs of its member States.

CHAPTER II

WORK OF THE COMMISSION SINCE ITS SIXTY-FIRST SESSION

A. Activities of subsidiary bodies

5. A list of meetings held since the sixty-first session is contained in Annex III, showing in each case the dates, the officers and the symbols of the report. These reports record the agreements reached and decisions taken.

B. Other activities

6. The secretariat serviced the regular session of the Commission, meetings of the Executive Committee, meetings of its subsidiary bodies, and other meetings held under its auspices. It also produced publications as listed in Annex IV. The secretariat maintained close and regular liaison with United Nations Headquarters and cooperated with the Departments concerned, as well as with the secretariats of the other regional commissions on projects of common interest.

C. Relations with other United Nations Programmes

7. The cooperation of the Commission and its secretariat in 2006/2007 with various United Nations bodies, in particular the United Nations Development Programme (UNDP), and other international organizations, as well as with their secretariats, continued as called for in the UNECE Reform.

CHAPTER III

SIXTY-SECOND SESSION OF THE COMMISSION

A. Attendance and organization of work

8. The sixty-second session of the Commission was held from 25 to 27 April 2007. The Commission heard statements by the Chairman and the Executive Secretary, as called for in the agenda, and a message from the Secretary-General of the United Nations.

D. Account of proceedings

Implementation of the reform (Agenda item 2)

20. For the consideration of this item the Commission had before it document E/ECE/1446 on Implementation of the Reform and Conference Room Paper 1 on the same subject.

Conclusion 1

(a) The Commission noted with appreciation the report of the Executive Secretary and the progress in implementing the reform, and expressed its broad agreement with the analysis contained therein and invites the Executive Committee to develop further any points which can form a particular contribution to the well functioning of the secretariat and the Sectoral Committees. Such issues could include:

- (i) The consideration of a mechanism to facilitate the identification of which intersectoral issues ECE should address
- (ii) Efforts for a more systematic review of technical cooperation in the Sectoral Committees
- (iii) Further strengthening relations with other organizations
- (iv) Developing an ECE corporate image and enhancing the visibility of ECE's work

(b) The Commission noted with appreciation the progress achieved regarding programme planning, monitoring and evaluation and it encouraged the Sectoral Committees, with the support of the secretariat, to pay particular attention to the planned biennial performance evaluations.

Issues calling for action by the Commission
(Agenda item 3)

21. For the consideration of this item the Commission had before it document E/ECE/1447 outlining the issues calling for action by the Commission: approval of the Terms of Reference of five Sectoral Committees, approval for the holding in 2008 of both the ECE's Third Regional Implementation Forum for Sustainable Development, and a regional review of progress in the economic areas covered by the outcome document of the ECE regional Beijing +10 review.

22. The Commission also had before it document E/ECE/1447/Add.1 containing the revised terms of reference of the Committee on Environmental Policy.

23. In addition under this item the Commission had before it document E/ECE/1447/Add.2 on the UNECE Technical Cooperation Strategy. The Strategy had been endorsed by the Executive Committee at its meeting of 7 March 2007 at which time the Committee also requested the secretariat to submit this strategy as a formal document to be adopted by the Commission at its sixty-second session.

Conclusion 2

(a) The Commission approved the Terms of Reference for the Committee on Economic Cooperation and Integration, the Committee on Environmental Policy, the Committee on Housing and Land Management, Committee on Sustainable Energy, the Committee on Trade, and the Timber Committee.

(b) It decided to hold the Third Regional Implementation Meeting in preparation of the sixteenth session of the Commission on Sustainable Development CSD-16 on 28-29 January 2008 in Geneva. It invited ECE member States to contribute funds to help defray the costs related with the preparation of a consultants' paper on sectoral issues and with the travel and daily subsistence allowance of representatives of eligible member States.

(c) The Commission took note of the proposal to organize a regional meeting in 2008-2009 to review progress and identify good practices in the area of Women and Economy, in the context of preparations for the Beijing + 15 review. It requested the Executive Committee to take the matter up and discuss the format, and other modalities of the proposed meeting.

(d) The Commission adopted the revised UNECE Technical Cooperation Strategy that had previously been endorsed by the Executive Committee at its thirteenth meeting on 7 March 2007.

The regional dimension of United Nations development
(Agenda item 5)

24. A panel discussion on the regional dimension of development, a brief account of which is included in Annex II, was held under this item with the participation of the Executive Secretaries of the ECE, ECA, ECLAC, ESCAP and ESCWA:

Mr. Marek Belka, Executive Secretary, Economic Commission for Europe (*moderator*)

ANNEX I

DECLARATION FOR THE SIXTIETH ANNIVERSARY OF THE UNITED NATIONS ECONOMIC COMMISSION FOR EUROPE

adopted on 26 April 2007

We, the member States assembled in Geneva on the occasion of the Sixtieth Anniversary of the United Nations Economic Commission for Europe on 25 April to 27 April 2007, declare that:

Since its creation, the Economic Commission for Europe has been striving constantly to fulfil its core mandate by promoting Pan-European and Transatlantic cooperation and integration, bringing issues of global dimension to the regional level, while regularly adjusting its activities to the geopolitical and economic changes in the region as well as to the evolving needs of its member States, thereby contributing to the overall stability in the region.

Member States acknowledge achievements by the Economic Commission for Europe over these past 60 years in fostering cooperation and integration and reaffirm their commitment to support and strengthen the effective implementation of the organization's mandate and to ensure its continued substantive relevance, greater visibility and improved transparency.

Acknowledging the identity of the ECE region: its Successes and Challenges

Over past decades, based on their mutual interdependence, many countries of the region of the Economic Commission of Europe have made considerable progress in increasing the standards of living of their population, in integrating their economies in the region and in the world economy.

Successful processes of deeper regional integration have contributed significantly to peace and security and have served as a powerful incentive for adjusting economies of the region to a changing and demanding environment.

The increasing acceptance and promotion of democratic values together with the choice for market-based economies and the concern for social and environmental issues have resulted in a significant progress in institution building and peace in the region. This was also made possible through the willingness of governments, the work of international organizations, the strength of the private sector and the dynamism of civil society.

Member States recognize that economic cooperation and integration are key elements for achieving prosperity, sustainable development and economic growth in the region. They further recognize that peace and stability, the observance of human rights and the achievement of internationally agreed development goals, including the Millennium Development Goals will enhance economic prosperity in the region.

Further progress on both the political and economic side needs to be made to reduce existing disparities among member States in terms of economic and institutional development, and environmental protection.

Setting ECE strategic directions – the way ahead

In line with its core mandate and its areas of work as refined and refocused by its 2005 reform, the Economic Commission for Europe can substantially contribute to addressing these challenges by:

Further exercising its role as a multilateral platform which facilitates greater economic integration and cooperation among its fifty-six member States and which promotes sustainable development and economic prosperity through policy dialogue, negotiation of international legal instruments, development of regulations and norms, exchange and application of best practices as well as economic and technical expertise and technical cooperation for countries with economies in transition.

As an integral part of the United Nations, continuing to bring the development and environmental goals agreed by the international community down to the regional level, and supporting their implementation with the involvement of relevant actors making maximum use of the Economic Commission for Europe's catalytic role for further intergovernmental action and forging partnerships with these actors, including with representatives of the civil society and the private sector.

Contributing to increasing coherence of the United Nations development work at the regional level, in close cooperation with other entities of the United Nations family.

Ensuring that the Economic Commission for Europe's work is rooted in its sectoral committees and their subsidiary groups which form the major asset of the organization and constitute the basis for its intergovernmental work.

Continuing to provide a forum for open dialogue among member States and other stakeholders within the areas of its competence: sustainable energy policies and transport development among others.

Assisting countries to implement its intergovernmental outcomes through sectoral activities and technical cooperation thereby serving as a bridge for sharing experiences and best practices among member States and to share actively this work with countries outside the region of the Economic Commission for Europe.

Supporting regional and subregional integration processes in their endeavours and in this context:

- (a) Welcoming stronger cooperation with the Organisation for Security and Cooperation in Europe in economic and environment areas.
- (b) Contributing its expertise and networks to relevant activities undertaken within the framework of the Eurasian Economic Community and the Neighbourhood Policy of the European Union.
- (c) Taking full advantage of the United Nations Special Programme for the Economies of Central Asia for improving and strengthening integration and cooperation within the subregion and with the whole region.
- (d) Calling for increased cooperation among existing economic integration processes in the region.

Further implementing the United Nations' global mandate on gender equality by promoting the economics of gender as a factor of sustained growth.

Evaluating the reform of the organization in 2009 to further promote effective governance, result based management and a Programme of Work responding to members' priorities and needs.

We therefore,

reiterate that cooperation is key for reaching the objective of well-being of present and future generations and is also a cornerstone for political stability and durable peace in all parts of the region;

underline that the Economic Commission for Europe is well placed within Pan-European and Transatlantic architecture to continue to address transboundary issues, promote prosperity and contribute to building a common regional economic space;

commit our renewed support to a re-invigorated organization as a major forum to meet effectively the changing needs of its member States;

reaffirm that, based on a closer solidarity among all the member States of the Economic Commission for Europe, the ultimate goal of this regional cooperation is to build a lasting prosperous and peaceful region.

ANNEX II

PANEL DISCUSSIONS HELD UNDER AGENDA ITEMS 5, 6 AND 8

Item 5: The regional dimension of United Nations development

1. Under this item the Director-General of the United Nations Office at Geneva conveyed a message from the Secretary-General who congratulated the ECE for “its first – very dynamic – sixty years”. The Secretary-General underlined the capacity of the ECE to adapt to the geopolitical and economic changes of the region, first by keeping the dialogue alive during the Cold War through cooperation on a wide range of technical issues, and then by pursuing these activities in an ever-changing European architecture, with a specific support to countries meeting the challenge of transition. He also stated that Europe is globally a success story in terms of development but that this success is not shared by all countries of the region. Therefore, the challenge for ECE and its partners is to help spread the success, and build on it further.

2. The Executive Secretary of ECE noted the importance of the regional dimension in promoting development. Firstly, global commitments need to be adapted to the characteristics of each region in order to be effectively implemented – for example the need to “contextualize” the internationally agreed development goals in each region. Secondly, there are a number of issues which have a strong impact on national development and which have to be addressed at the regional level (for example transport network and border-crossing, trade facilitation, energy security, environmental protection). Thirdly, regional exchange of experience and best practices proves to be useful for “enlightening” national policymaking in various policy areas where countries face the same problems and challenges. Fourthly, the mushrooming of subregional and regional organizations shows both the usefulness of regional governance structures and the necessity for more intensive cooperation among them through qualified partnership relationships. Finally, the report of the High-level Panel on System-wide Coherence refers to the need for increased coherence at the regional level and efforts in this respect should acknowledge the place of the Regional Commissions in the regional architecture, based on their assets, functions and expertise.

3. These and other important aspects of regional work were concretely illustrated by the panellists.

4. The Executive Secretary of ESCAP focused on the regional commissions’ role in facilitating coordination and synergies on issues calling for regional cooperation. Major areas for fulfilling such a facilitating role in the Asia-Pacific region included trade integration, disaster preparedness and prevention, South-South cooperation and a number of other issues of a transboundary nature. Most of these issues are addressed within the framework of the Regional Coordination Meetings convened by ESCAP and gathering together the regional offices of the United Nations entities concerned.

5. The Executive Secretary of ECA illustrated the role of the regional commissions in forging partnerships with other regional organizations. In particular, there is now a clear-cut division of labour between the Economic Commission for Africa, the African Development Bank, and the African Union. The ECA also supports the various African regional economic communities through its subregional offices and it has established a compact with UNDP, focusing mainly on a coordinated approach to the promotion of the Millennium Development Goals (MDGs) in the region. Recently, the African Union Summit requested the United Nations Secretary General to enhance the coordinating role played by ECA in order to strengthen system-wide coherence for more effective support to the African Union and its New Partnership for Africa’s Development (NEPAD) programme.

6. The Executive Secretary of ESCWA highlighted the role of the regional commissions in linking social and economic development with peace and security. During periods of crisis and conflicts, efforts

are focused on humanitarian relief rather than on supporting sustainable development. This is particularly the case in the ESCWA region where many development programmes have been disrupted by conflicts. In response to this situation, ESCWA has developed regional programmes to contain the spillover effects of conflicts on development. As an example, it has set up a Unit for conflict-related issues initiating activities aiming at conflict prevention, such as social and educational programmes for reducing ethnic tensions.

7. The Deputy Executive Secretary of ECLAC focused on the role of analytical work in support of policymaking for achieving the internationally agreed development goals, including the MDGs. One of the main functions of ECLAC is precisely to provide analytical work in a wide range of policy areas in the economic and social fields. The policy recommendations resulting from this work are transmitted to countries through capacity-building activities, with the support of UNDP. Such an approach contributes to strengthening governmental institutions for the development of public policies, a key factor for achieving the United Nations development goals in the ECLAC region.

8. The panel highlighted the important regional dimension of the development efforts and the role played by the regional commissions in this respect. It also showed both the commonalities of functions and the diversity in the way the regional commissions fulfil them, depending on the specific characteristics of their respective region. As part of the United Nations, the regional commissions are a key actor for strengthening system-wide coherence in the development work at the regional level, together with the other regional offices of the United Nations entities. In particular, the efforts already engaged to strengthen cooperation and coordination with UNDP should be actively pursued.

Item 6: Building on ECE's sixty-year contribution to pan-European integration:

(a) Cooperation for stability and prosperity in the ECE region

9. On a general note, the keynote speakers supported the ECE's activities in the following areas: energy (ensuring energy security and sustainable development), transport (development of transport links, harmonization of transport law and simplification of border crossing procedures), environmental protection (through the system of environmental conventions and monitoring), competitiveness and innovative development (promoting best practices, new technologies and supporting the innovations sector), and trade (facilitation and harmonization of trade procedures). Importance was also attached to the Commission's efforts to help countries achieve the MDGs in the ECE region, in particular, in Central Asia (through the United Nations Special Programme for Central Asia (SPECA)) and the Transcaucasus.

10. The speakers stressed the importance of making progress in the field of pan-European cooperation and integration. Multilateral organizations, such as the ECE, European Commission and OSCE were mentioned as the vital engines in the process for stability and prosperity. Recent examples of terrorist attacks, human disasters and failed states showed that the achieved stability remains constantly at risk. Europe was warned that it should not isolate itself, but instead needed to further cooperate with neighbouring regions to confront threats and meet challenges.

11. The close cooperation between ECE with its technical know-how and OSCE with its political strength has already proved its success, particularly in the field of transport and environment. The renewed interest of ECE in the South-East European and Mediterranean States was highly welcomed as a further impetus to strengthen cooperation. Reference was made to the substantial contribution that ECE has made to economic cooperation and prosperity in Europe through the development and introduction of unified standards, best practices and other instruments. In a concerted effort with other institutions (European Commission (EC), OSCE, Organisation for Economic Cooperation Development (OECD), Black Sea Economic Cooperation (BSEC), EurAsEC), ECE could create an economic basis for a truly

integrated Europe without dividing lines. The recent reform has adapted ECE to the new development challenges in the region and to the evolving needs of the member States.

12. The panel acknowledged that the European Union (EU) represents the deepest and most successful integration process within the ECE region. However, the panel stressed that the European Union (EU) does not cover all countries of Europe and all aspects related to stability and prosperity for the region. Thus, although the EU is a key player in the international field, it cannot do without pan-European/transatlantic organizations such as ECE to provide a multilateral platform for dialogue with other countries and emerging markets. The panel supported ECE as a multilateral organization and pointed out its indispensable role in helping countries to achieve the MDGs and providing a forum for permanent dialogue among all European countries, both EU and non-EU. There was much praise for the ECE's reform which had strengthened its capacities to produce regulations, norms and best practices to facilitate economic development and integration to the benefit of ECE member States with economies in transition. In particular, the energy sector was mentioned, where security in supply, transit and consumption should be ensured as the basis for sustainable development. Although the ECE is not a trade organization per se, there was recognition that many achievements towards global trade integration were due to the crucial yet often unnoticed work done within the framework of the ECE. The crucial importance of ECE's Euro-Atlantic dimension was stressed.

13. Various interventions from the floor stressed the crucial role of the ECE towards the stability and prosperity of the European region, in particular for countries with economies in transition. ECE's role as a platform for pan-European dialogue was praised. There was ample recognition that ECE is the only economic organization capable of bringing together all countries of the European region. In addition, it was stressed that ECE serves as a platform between governments and the ordinary citizen through consultations with non-governmental organizations (NGOs). In the future, there may be steps taken for further economic integration between Europe and North America. If new initiatives would be taken in this respect, particularly in terms of market integration, this may create new demands for ECE services in the areas of trade and provision of other public goods.

14. As a conclusion, it was stated that the strength of ECE lies in its practical approach by providing standards which can easily be replicated and gradually adopted globally. Through practical contributions to stability and prosperity in the region, ECE will continue to exert political significance, while helping to resolve political tensions.

(b) Pan-European economic integration in a globalized world

15. The keynote speaker and panellists described the current status of European integration and the challenges facing the region, both in terms of further regional integration as well as issues related to the area's competitiveness on the global market. The importance of economic integration in promoting political stability and economic prosperity was a general theme. There was basic agreement that a desired objective for the ECE region is the creation of a single economic space without dividing lines, either East-West or by level of economic development. Much of the discussion focused on how to bring this objective about. This includes the further enlargement of the European Union, increased integration among the former states of the Soviet Union including further development of EurAsEC, and integration throughout Europe under the European Neighbourhood Policy. These regional integration efforts need to be implemented in a way that promotes not only intraregional integration but also pan-European integration while at the same time promoting the global competitiveness of the entire region. The strengthening of the economic relationship between the European Union and the Russian Federation or its customs area is critical to the economic and political security of the region. In addition, the importance of the transatlantic dimension between North America and a wider Europe was also stressed. Overall, the process of pan-European integration provides a broader framework for each of these specific integration

processes. The UNECE, being a neutral forum, can assist in bringing these various dimensions of the integration process together as well as making them mutually reinforcing.

16. ECE has historically contributed to promoting integration and prosperity and, with its ability to evolve and reform itself, it was emphasized that it can continue to play this role. ECE was encouraged to strengthen its relationships with other regional and international bodies especially with those promoting economic development and integration in the technical areas where ECE has expertise. More specifically, the development of a pan-European infrastructure in the areas of transportation and energy along with improvements in trade facilitation were cited as key areas of ECE competence. In this regard, EurAsEC, in furthering its integration efforts among its members, stated that it could benefit from the expertise of ECE in the management of environmental resources, the operation of transportation networks, and trade facilitation. Several speakers noted the practice of adopting ECE standards and norms globally and stated that this reflects the competence of the institution and should be further encouraged.

17. It was further noted that although the ECE region is the most economically advanced in the world, there are nevertheless geographical and social pockets of poverty. Economic growth, although important and even critical for addressing poverty, will not be sufficient for the achievement of the MDGs. Policy changes that prioritize poverty reduction and increased assistance for vulnerable groups are required. The United Nations system has the expertise to advise countries on these policy choices. Globalization and European integration, while providing significant benefits overall, have nevertheless harmed some of the lower skilled workers and some local communities. Policies are needed that ensure that the benefits of globalization and of economic integration are widely shared. Local or subregional spending is a useful approach to addressing these problems since it can be targeted directly where there is a need. Improved international cooperation and development assistance is also needed to address not only the problem of poverty but also those concerning migration, gender equality, and sustainable environmental policy.

18. The diversity of the economic situations of the ECE member States presents a number of challenges that require policies to be flexible and adaptable to individual country circumstances. In order to fully integrate the region into the global economic system, the ECE member States were urged to assist those economies that are currently not members of the World Trade Organization to join that organization.

19. The issue of international competitiveness is of central importance for all the ECE economies. Although each economy or region has some specific problems in this area, there are a number of issues that are important for all the ECE economies including the implications of population ageing, low labour force participation rate, needed reform of pension and healthcare systems, labour market rigidity and the current lack of economic dynamism. Moreover, an open market system would strengthen competitiveness by allowing full competition. Regional cooperation may be useful in addressing these problems as best practices can be compared and regional spillover effects properly accounted for.

Item 8: Promoting sustainable development in the ECE region: come decisive factors

(a) Sustainable energy policies: the key to energy security

20. This segment provided significant insight into the challenges facing the ECE region as it strives to achieve a secure and sustainable energy future. The broad spectrum of speakers and panellists and their perspectives emphasized the necessity for cooperation among all stakeholders, reflecting the critical role each plays in the full cycle of resource management and delivery of energy services.

21. The discussion underscored that energy security is an issue of global importance: one that is viewed as a pressing issue by member States, the private sector, international organizations and the public alike. Furthermore, in an era of profound change driven by a rapidly globalizing economy, it is increasingly seen as one of the key issues shaping the foreign policy dialogue between and amongst producing and consuming countries. This will remain the case as demand for energy resources is expected to continue its growth trajectory at a swift pace, both within and outside the ECE region.

22. The meeting also highlighted the linkages between energy and environment. Much emphasis in the debate over energy use has been and will continue to be focused on the energy sector's contribution to climate change given the magnitude and global impact of climatic changes. But other important environmental issues, such as air and water quality, must also be addressed. Formulation of successful energy policy, therefore, must also consider energy development and delivery of energy services within the context of these wide-ranging environmental challenges.

23. Although faced with significant challenges, the meeting agreed that a long-term sustainable energy future is possible. The participants agreed that the technologies are generally available today to meet these many challenges. The costs, whilst significant, are not beyond reach but will require significant investments in upstream and downstream infrastructure. The linkage between energy and environmental protection was especially notable in discussions on alternative fuels including biofuels, energy efficiency, and carbon capture and storage (CCS), all of which support mitigation of carbon emissions while resulting in indigenous energy production.

24. In summary, the meeting noted the need for government policy action or intervention in a number of key areas, including:

- (a) promoting investment to boost capacity;
- (b) further price liberalization to bring domestic prices in many producing countries in line with export pricing;
- (c) implementing measures to improve energy efficiency and conservation;
- (d) increasing reliance on non-fossil fuels, in particular biofuels and renewables;
- (e) encouraging research and development in greening the fossil fuel energy supply chain and in particular in supporting the introduction of carbon capture and storage technology;
- (f) supporting development of reliable and diverse transit routes;
- (g) increasing nuclear power, whilst addressing the issue of safe management of nuclear waste; and
- (h) ensuring adequate energy diversity.

25. In looking forward, the meeting agreed that the strengthening of policy measures and the mitigation of energy security risks would benefit from a strengthened and more coordinated multilateral dialogue, at the expert level, between governments, industry, the financial community and relevant international organizations. There was also wide acknowledgement that ECE offers an excellent forum for dialogue and cooperation. The meeting recognized the competence, capacity and legitimacy of the ECE on issues affecting sustainable energy development, acknowledging that it has a clear role in facilitating further discussions and encouraging progress. Specifically, delegates noted that ECE can support a range of activities including: (a) exchange of information and data, (b) analysis of legal and regulatory frameworks, and (c) development and harmonization of norms and standards.

26. Specific conclusions drawn from the segment on energy security included:

27. Appreciation was expressed for the presentations of the high-level keynote speakers and panellists on the global energy outlook, energy security and sustainable energy policies in the ECE region; and for the ECE publication on "Emerging Global Energy Security Risks".

28. Appreciation was also expressed to the Energy Security Forum members, authors and national experts for the Study on Energy Security Risks and Risk Mitigation in a Global Context and the Report on Global Energy Security and the Caspian Sea Region on which the publication “Emerging Global Energy Security Risks” has been based; and to the Energy Security Forum, its Executive Committee, members and supporting institutions for the excellent contribution the Forum made during its three year mandate to international cooperation in the energy field.

29. The discussants, noting the massive investment required in global energy infrastructure over the next three decades, urged the Committee on Sustainable Energy to undertake a broadly shared intergovernmental expert dialogue on energy security specifically in the area of energy infrastructure investment and financing.

30. It was also recommended that this enhanced technical dialogue on energy security be conducted during annual sessions of the Committee with the participation of representatives of governments, energy industries, the financial community and relevant international organizations.

31. The Committee was also urged to consider extending this expert dialogue in the future to cover any/all of the following areas: (a) data and information sharing and increased transparency (b) legal, regulatory and policy framework, (c) harmonization of standards, (d) research, development and deployment of new technologies, and (e) investment/transit safeguards and burden sharing in situations of crisis.

32. The discussion also noted the considerable work underway in many of the areas identified above, not only in ECE, but also in other international organizations, such as IEA/OECD, the Energy Charter, the International Energy Forum and OPEC. These ongoing activities could benefit from stronger multilateral cooperation and political endorsement.

33. The Meeting also expressed appreciation to Swiss Re and Conning & Company for their establishment of the European Clean Energy Fund under a mandate from the ECE Energy Efficiency 21 Project; and to the Government of France for the generous support it has extended to the Energy Efficiency 21 Project together with the Global Environment Facility and the United Nations Foundation, for the establishment of the ECE Energy Efficiency and Renewable Energy Investment Fund for Eastern Europe.

(b) Secure transport development: a key to regional cooperation

34. This segment discussed the challenges that the ECE region is facing as it endeavours to develop efficient and secure transport links as a key factor to enhance regional cooperation. Two keynote speakers and a large number of panellists emphasized the need for a coordinated development of transport links in the framework of appropriate mechanisms such as those the ECE has been promoting.

35. The panel recalled that the development of transport links is an indispensable pre-condition for the socio-economic development of countries as well as for regional cooperation and integration. However, the degree to which transport links are developed varies among countries and subregions of the ECE. In many ECE countries, transport links are insufficiently developed. The uneven progress in the development of transport links reflects a host of factors, including historical reasons, the political priorities of countries, their stage of economic development and level of economic prosperity, availability of financing, their openness to international economic cooperation and trade, their geographical location and proximity to major transport axes and trading routes.

36. The panel also recalled that the development of transport links requires considerable financial outlays and over a long period. This makes it a complex exercise, requiring governments to strike a

balance with other national priorities, weigh national versus international interests, ascertain the economic, social and environmental net benefits, coordinate programmes and timetables with neighbouring countries, determine the degree of private versus public participation and weigh security considerations.

37. The meeting agreed that, while the development of international transport links is complex and long-term in nature, major requirements are that there be strong political and financial commitment at the national level as well as effective international mechanisms for cooperation and coordination of national strategies and approaches.

38. The participants were informed of the institutional and financial mechanisms that the European Union and the European Investment Bank have put in place for the development of transport links in its Member States. They were also informed about the proposals the European Commission is making for the development of five trans-European transport axes that go beyond the EU territory.

39. The meeting underlined the strategic importance of developing efficient and secure transport links in Eastern and South-Eastern Europe as well as Euro-Asian transport links, and stressed that the ECE Infrastructure Agreements define the long-term pan-European and Euro-Asian transport networks.

40. The panel noted that, in order to coordinate the development of these networks, a number of Central, East and South-East European countries had established, under ECE auspices, two subregional cooperation frameworks, namely the Trans-European Motorway (TEM) and Trans-European Railway (TER) Projects. In this respect, the panel stressed the importance of the TEM and TER Master Plan, which was elaborated with ECE support and with the participation of 21 Central, East and South-East European countries, and which has identified priority transport links and priority projects.

41. With regard to the development Euro-Asian transport links, the meeting underlined the usefulness of the inter-country cooperation promoted by ECE, jointly with ESCAP, which has also led to the identification of priority Euro-Asian routes as well as the evaluation and prioritization of a large number of projects.

42. The meeting brought to the fore that the development of transport links is not only about infrastructure. It also requires efficient border crossings, harmonized transport regulations, greater interoperability of rail systems, a higher level of safety and security and greater convergence of transport policies and strategies.

43. In conclusion, the panel agreed that the ECE work on TEM and TER as well as on Euro-Asian links have been instrumental in focusing attention and promoting the development of transport links in the subregions concerned. Both ECE exercises have provided robust and tangible results in all those areas, from which the countries concerned but also the European Union and International Financial Institutions could benefit.

44. In looking forward, the meeting agreed that this work needs to be strengthened and practical steps taken to facilitate the further development of the priority transport links and priority projects that have been identified.

45. Finally, the meeting agreed to invite the European Commission and the European Investment Bank to consider incorporating the results of the TEM and TER Master Plan and of the Euro-Asian Transport Links Project into their future work and supporting their implementation, in close cooperation with ECE, for the benefit of all ECE member countries.

(c) The economics of gender in the European economy

46. This session discussed gender equality as one of the decisive factors behind competitiveness and growth of the European economy. In addition to the keynote speaker and panellists, a wide range of participants representing member countries, NGOs, the private sector (associations of business women) and international organizations took part in the discussion.

47. The opening remarks focused on the role of the United Nations and its regional commissions, and ECE in particular, in promoting equality of economic opportunities. It was underlined that gender equality is essential for achieving the MDGs and that the gender mandate is under-funded and requires more resources and attention at policy levels. Strengthening of ECE gender activities, possibly by setting up a centre on gender equality, was also suggested in the context of the current debate on a new United Nations gender architecture.

48. The keynote speaker stressed that gender equality is central to a modern growth strategy in Europe, which has to address two main challenges facing the labour force: ageing and shortages. Not only will society benefit from this approach but it is actually dependent on women's equitable participation for sustainable economic growth and poverty eradication. The success of Norway in this respect was explained by how it had established effective mechanisms to share power, child care and work (Mechanisms for Child Benefits and Parental Leave, and Equality in Economic Decision-making), which ensure that both men's and women's talents are used.

49. The panel discussion focused on: (a) the links between gender equality, competitiveness and growth; (b) countries' experiences in mobilizing women's economic potential, (c) the EU's equal opportunities policy and its impact on neighbouring countries; and (d) the role of regional and subregional cooperation.

50. The discussion on the links between gender equality and economic performance drew on the findings of the Global Monitoring Report of the World Bank and the Gender Gap Report of the World Economic Forum, which showed that countries that score high on the competitiveness list also have high levels of gender equality. The new Action Plan on Gender Equality of the World Bank Group shows that the improvement of women's access to product, financial, land and labour markets is expected to accelerate economic growth.

51. The discussion of country experiences revealed that women's economic potential still remains untapped despite progressive policies in a number of countries, including in Central Asia and the Caucasus. It was underlined that women are well educated and contribute to growth also in quality terms bringing new values, ideas, management styles and tastes in developing new products and services. Countries and representatives of NGOs pointed out policies and measures for improving women's access to fiscal, credit and production resources, employment, including in rural areas, closing the gender wage gap, supporting self-employment and pilot initiatives on gender budgets. It was agreed that the latter are a powerful tool to equalize and monitor opportunities of men and women.

52. The leading role of the European Commission in promoting gender equality, and in particular the Lisbon Strategy, a European Pact for Gender Equality and the Road Map, were discussed in a pan-European perspective. The participants underlined that the European Neighbourhood Policy and its instruments provide a motivation for change and a channel for disseminating good practices. Synergies between the EU and ECE activities in the area of gender and the economy were also mentioned.

53. The panel stressed also the role of regional and subregional cooperation in learning from each other and finding new solutions. In this context the very positive experience of the gender and economy group, established at the initiative of Kazakhstan under SPECA was noted in providing a platform for the

exchange of good practices, developing pilot projects and strengthening cooperation among United Nations agencies and international organizations working in this subregion.

54. In summary, the discussion emphasized the need for:

- (a) raising awareness of policymakers that gender equality is an economic asset;
- (b) capacity building in the area of gender statistics and improvement of sex-disaggregated data and indicators;
- (c) more work on public finance and, in particular, gender responsive budgeting;
- (d) promoting women's entrepreneurship through including a gender perspective into the legislative framework of small and medium-sized enterprises (SMEs) and support measures in access to financing, training and Information and Communication Technology (ICT);
- (e) exchanging good practices in the area of economics of gender and promoting good practices through publications;
- (f) addressing gender implications of ageing;
- (g) enhancing regional and subregional cooperation among all stakeholders and actors.

55. In looking forward, the meeting agreed that gender equality is crucial for economic performance, reducing fiscal imbalances and addressing the challenges of ageing in the European economy. There was also a wide acknowledgement that ECE with its regional platform and expertise in the gender and economy area, including gender statistics, can play a vital role in helping countries to achieve equality of economic opportunities, recognizing that a redistribution of power, care and work is the only road ahead for sustainable development in our region.

56. Specific conclusions, based on the discussion, included appreciation for the opening remarks, presentations of the high-level keynote speaker and panellists on the economics of gender in Europe, country experiences and role of EU and international organizations in ensuring equality of economic opportunities. The ECE was also encouraged to promote gender equality as "smart economics" in the context of reaching MDG goals 1 and 3 through the work of relevant subprogrammes and focused activities;

57. The discussion also encouraged ECE to consider developing a network of economic policymakers and international organizations to exchange good practices related to the economics of gender inter alia with a view to facilitating the review of progress 2008-2009 (as agreed under agenda item 3); and to explore the interest of member countries to further support ECE gender activities in the context of the specific needs expressed during the panel discussion. Such support could for example take the form of extrabudgetary funding and junior professional officer (JPO) programme. It also encouraged ECE to strengthen its cooperation with United Nations agencies, the EU and its good neighbourhood policy and other organizations in promoting economic opportunities in the eastern part of the region.

58. The meeting also recommended that ECE further develop the work of the SPECA group on gender and economy and suggested that the possibility of using this experience in promoting equal opportunities in other subregions (such as the Black Sea region) should be explored. It also expressed appreciation to the Government of Norway for taking a lead in supporting the inclusion of the economics of gender panel into the programme of the Sixtieth Anniversary session.
