

# Comprehensive International Law of Sustainable Energy: The Contribution of Law to Sustainable Development

Adrian Bradbrook's ideas (Professor of Law at University of Adelaide)

Presented by Viktor Badaker (**Economic Affairs Officer, UNECE/Sustainable Energy Division**)

**Third International Forum: Energy for Sustainable Development**  
Kyrgyzstan, Issyk Kul Lake, 12-14 September 2012

# Comprehensive International Law of Sustainable Energy

- Do we need to develop a law of sustainable energy (SE)?
- If yes, it's time to move it from the periphery to the centre of the legal debate on sustainable development
- SE is critical for three principal reasons, which are interlinked:
  - to mitigate climate change and protect the environment
  - to improve energy security;
  - to encourage economic development

# Comprehensive International Law of Sustainable Energy

- Legal management regime should demonstrate how law can address SE issues, and the next stage will be for decision-makers and interested parties to take action.
- Such challenges primarily require a global solution, and therefore it must be international law, as implemented through national laws and policies, that takes its place at the forefront of developments in the sustainable energy field and might be the focus of the UN activities.

# Comprehensive International Law of Sustainable Energy

- There have been international legal developments in finding global solutions to discrete parts of the overall problem of energy supply and consumption, but to date they have been *ad hoc* and fragmented:
  - 1979 Convention on Long-Range Transboundary Air Pollution
  - 1986 Conventions on Early Notification of a Nuclear Accident and Assistance in the Case of a Nuclear Accident
  - 1987 Montreal Protocol on Substances that Deplete the Ozone Layer
  - United Nations Framework on Climate Change and its associated Kyoto Protocol

# Comprehensive International Law of Sustainable Energy

- **the pivotal role of energy in achieving sustainable development has been largely ignored due to the powerful conflicting vested interests in the international community**
- **to date the legal regulation of energy production and consumption has remained primarily within the domestic jurisdiction of countries and has not assumed an international character**
- **a strategy to provide part of the solution through law will be more likely to meet with a positive response from stakeholders**
- **law is essential to ensure that investment takes place to promote SE**

# Comprehensive International Law of Sustainable Energy

The creation of a common, sustainable energy future requires means of achieving it from a legal perspective by developing a new field of law – the law of sustainable energy

# Thank you for your attention!
