

WHO/UNICEF Joint Monitoring Programme for water supply, sanitation and hygiene - an update -

Francesco Mitis
World Health Organization

www.washdata.org

5th session

**Meeting of the Parties to the
Protocol on Water and Health**

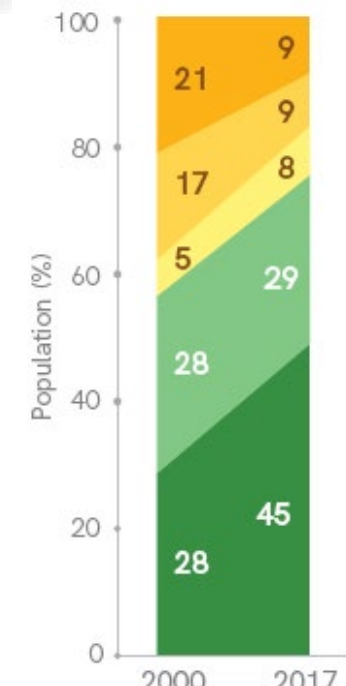

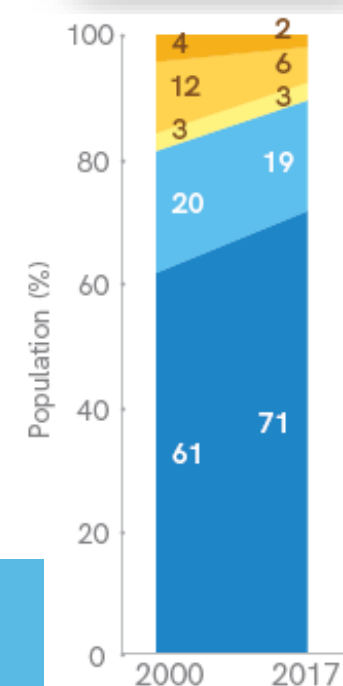

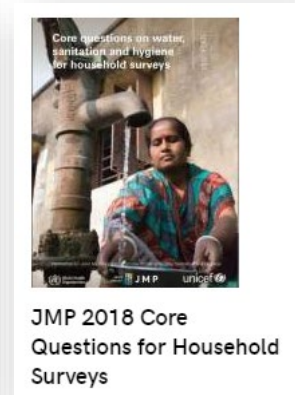

19-21 November | Belgrade | Serbia

WASH for households

- In the WHO European Region:
 - 16 million without basic drinking water services (54% in rural areas)
 - 49 million without piped water (72% in rural areas)
 - 31 million without basic sanitation services (57% in rural areas)
- Main challenges related to data availability:
 - Data on drinking water quality for urban/rural: scarce
 - Data on safely managed sanitation: 8 countries have no data
 - Data on faecal sludge management: scattered data/few good examples
 - Data on hygiene: no regional estimate could be calculated (mostly from high-income countries)

- JMP uses data from national reporting under the Protocol
- JMP supports strengthening the national WASH monitoring
- Integrate SDG 6 core indicators in the national monitoring and/or household surveys, by adapting to local context

SURFACE WATER
 UNIMPROVED
 LIMITED
 BASIC
 SAFELY MANAGED
 OPEN DEFECATION
 UNIMPROVED

 BASIC
 SAFELY MANAGED

WASH in health care facilities

- **No regional estimate** for water, sanitation, hygiene, healthcare waste and environmental cleaning
- **Few countries provided data** through country consultation:
 - 100%-requirements in place for hospitals: such data were **not used** for estimates, if not backed up by evidence (e.g. monitoring or assessment data)
 - Few countries provided data from their surveillance programmes: data **used** for estimates
 - Data used for estimates: water (9 countries), sanitation (5), hygiene & waste (7), cleaning (2)
- **Updated global report** will be published in 2020:
 - Country files updated & WASH coverage
 - Progress of implementation of the WHA resolution on WASH in HCFs
 - Other relevant WHO core areas

WASH in Schools

- The global SDG baseline report (2018) features data from 30 countries, but data gaps
- About **3.3 million** pupils do not enjoy basic drinking-water
- Over **5 million** pupils still lack basic sanitation facilities such as toilets or latrines at schools
- Update report will be published in 2020:
 - Data collection and extraction are in progress
 - **More data needed, please share**

- Strengthen national monitoring & surveillance of WASH in HCFs & schools: JMP and Protocol interlinkage
- Adapt relevant SDG core indicators into national assessments and monitoring mechanisms
- Communicate & use monitoring results for policy actions
