# The Republic of Moldova's Climate Change Adaptation Strategy by 2020

## General Objective

Of Strategy is oriented on orientat increasing the capacity of Republic of Moldova to adapt and respond to actual or potential effects of climate change.

The purpose of the Strategy is To ensure that the Republic of Moldova's social and economic development is resilient to the impacts of climate change, by establishing a strong enabling environment and clear direction for an effective and coherent climate change adaptation process to take place across all relevant sectors.

**Specific Objective 3:** Climate resilience can be achieved not only by introducing specific adaptation activities, but also through a thorough review of existing and planned activities that can integrate climate risk in order to avoid mal-adaptation and ensure that planned investment is as cost effective as possible.

Petrusevschi Daniela

## Other strategies addressed

Petrusevschi Daniela

# Conclusions

A single strategic document that contains express provisions on the green economy: environmental strategy 2014-2023 years

Factors that influenced the emergence of the concept of green economy :

- The increased interest of the Government towards this topic
- Notions/concepts coming with European Directives
- Requirement of donors, including the EU

# Conclusions

- The quality and quantity of information available, and access to information is a key issue
- transparent monitoring system and a clear list of indicators that could be monitored consistently is imperative
- cooperation of various state institutions is a factor of major importance in the implementation of green economy

# Recommendations

A green economy roadmap would require:

- Identification and propagation of the concept of green economy and its principles
- Creating synergies between all areas concerned, to reflect the identified principles
- Ensure that old strategies in force and those to be developed, comply with the terms and principles of green economy
- Creating a system of indicators and and a transparent monitoring for the public and targeted areas
