

**Comments on Recommendations on the more effective use of electronic information tools
to provide public access to environmental information (with track changes)
by AC Focal point and Aarhus Centers in Armenia**

In the Chapter II General Policy, paragraph 19, I am suggesting to add the following sentence: “In case of providing the information by the Party, the competent body should make the suggestions (give an advice) (briefly) how to overcome these obstacles in order to avoid of non-implementation of the above-mentioned documents”.

In the Chapter III “Priority categories of Information” p. (ix), I am suggesting to add Ombudsman annual or ad hoc report on environmental situation.

In the Chapter IV. Tools and infrastructure, we suggest to add the following provisions:

- Taking into account the situation with COVID 19, the suggestion is to create and use the online platform for the accessibility of environmental information dissemination. The online platform should be served for the participation of the civil society members in the environmental activities. Then, the same platform can be used for the environmental education and for the discussion of the environmental issues.
