

**Strengthening energy statistics for climate change:
Discussion on policy drivers for energy data**

- 1. What areas of energy statistics should be strengthened to meet policy needs based on (what) priorities in your country?**
- 2. Is your country monitoring energy targets? Planning NDCs tracking? How is data availability vs needs?**
- 3. Could you share any good experiences of cooperation between statistics and policy on the definition of data requirements?**

**Strengthening energy statistics for climate change:
Discussion on cooperation data producers/users**

**Cooperation between energy statistics producers/users
in your country:**

- 1. what are the main challenges?**
communication/coordination;
technical/methodological;
...
- 2. could you share a good experience/tip?**

**Strengthening energy statistics for climate change:
Discussion on international work**

1. Do you know of/benefit from existing international activities/tools? What?

(harmonisation work, training, guidelines, manuals, ...)

2. What areas would benefit from further international coordination work?

a. sharing good national practices of:

- cross-institutional cooperation;
- data collection methods/ technical solutions...

b. enhancing synergies of international organisations on:

- approaches (e.g. methodologies, reporting requirements, ...);
- capacity building (training, workshops/fora, manuals, etc...); ...
