Third Expert Meeting on Statistics for SDG, 15 April 2019

# Task team on data transmission

Session 2: Coordination of Data Flows for Global SDG Statistics

Miriam Blumers and Ann Corp

DSTATIS  
Statistisches Bundesamt

Office for  
National Statistics

## Aims and objectives

The task team will aim to facilitate SDG data transmission through exchanging knowledge, experiences and best practices e.g. in the application of APIs and SDMX.

The task team will focus on data transmission techniques and tools.

It will not focus on national reporting platforms or data flow relationships between countries and agencies.

## Workplan

### Start with stocktaking

What has already been done and is currently being done in the context of SDGs and data transmission?

- IAEG SDG WG on SDMX
- Collaborative on SDG data interoperability
- APIs used for SDGs by countries and Custodian Agencies...

What do we need to know before transmitting data?

- For which indicators is there an already established data flow?
- What information needs to be transmitted for each indicator?  
*Does this vary depending on different indicator types eg statistical, non-statistical, geospatial*

## Workplan

### From groundwork to action

What would be useful with regards to SDMX? *E.g. testing SDMX DSD for different types of indicators*

What would be useful with regards to APIs? *E.g. identify possible standards for APIs*

What is needed with regards to the interoperability of platforms?

Possible Outputs of the Task Team:

- Information portal to share what we learn
- Quick start guide?
