

WEBINAR

Leave no one behind

Wednesday, 22 April 2020
15.00-17.00 EST time

Leave no one behind

Moderators:

Lieneke Hoeksma, Netherlands,
Mary Smith, Ireland

Speakers

Joanne Evans, UK
Sara Frankl, Sweden
Elisa Mosler Vidal, IOM
Anthony O'Grady DCCAE, Ireland

DESCRIPTION AND FOCUS

Leaving no one behind is the imperative principle of Agenda 2030. Ensuring the equal and equitable policy interventions means, visibility and data availability on various groups. From statistical perspective, this requires producing data disaggregated by the categories specified in the global metadata, but also according to national priorities and needs. This may require producing national data and analyses that are not covered by the global SDG indicator framework, or liaising with partners outside the official statistical system to make use of their data and knowledge.

The scope of this session is broader than just data disaggregation including the use of various data sources and data sets (both traditional and new), small-area estimation, special studies, geospatial data, open source and technology sharing, and non-official statistics.

DESCRIPTION AND FOCUS

Speakers will try to focus and answer the following questions

- How do you follow the “leave no one behind” principle in statistics for SDGs in your country?
- Do you face specific issues concerning vulnerable groups and a need of targeted monitoring?
- How do you take up the disaggregation challenge at a non-prohibitive cost and with limited production capacities?
- How do you produce the global and national disaggregation and why they are needed?
- Which are the confidentiality/disclosure issues and solutions when disseminating disaggregated data?
- Which partners are you working with for providing disaggregated data?
- Are there practical examples of how NSOs cooperate with special groups of interest in countries (e.g. local or city governments, private sector)?
