Data transmission and regional reporting

The Spanish National Reporting Platform for SDGs, the SDDS+ and the data transmission on SDMX

Ana Carmen Saura Vinuesa - INE Spain

SDDS+ and NSDP+

- The Special Data Dissemination Standard Plus (SDDS+) is an IMF initiative to guide member countries on the provision of economic and financial data to the public in support of domestic and international financial stability.

- In 2015 the first group of countries adhered to the SDDS+: France, Germany, Netherlands, Portugal, Sweden, USA and Spain. Currently 24 countries around the world have joined the SDDS+ initiative.

- National Summary Data Page Plus (NSDP+) disseminates 27 data categories (with the correspondent breakdown) facilitating ready access to the country data and metadata by the public. It also offers data in SDMX format, using a DSD provided by the IMF.

Similarities between NRP and NSDP+

- The NRP and NSDP+ are both allocated on the INE website and gather indicators produced by different ministries or agencies, besides of INE.

- The NRP and NSDP+ are required to disseminate data and metadata in a transparent manner. For SDDS+ adherent countries, it is compulsory to certify periodically their metadata in order to guarantee they are updated or to make the corresponding modifications.

- The data are demanded by the public and by international organizations in different formats; thus the information has to be disseminated for the public at large and in parallel reported (or allowed to download in SDMX) to custodian agencies and international organizations.

The case of SDDS+ as an example of automatic transmission of SDG indicators on SDMX

- SDDS+ is a good example of data exchange and automatic transmission using SDMX data flows. Strengths:

  - Data are disseminated in SDMX files in parallel with the publication to the general users. The IMF can download the SDMX files automatically the same precise date of their release.

  - This way, the data are always updated for the IMF. Besides it avoids possible inconsistencies among NSDP+ and national and international data bases.

  - Additionally, the automation of the process reduces observance costs by SDDS Plus adherents and monitoring costs for the IMF.

Indicator		Unit	Data				Source	Detailed results	Download	Methodolog
			Latest period	Latest data	Base period	Base data				
Target 1.2 By 2030, reduce at least by half the proportion of men, women and children of all ages living in poverty in all its dimensions according to national definitions										
Indicator 1.2.1 Proportion of population living below the national poverty line, by sex and age										
Population at risk of relative poverty (income < 60% of median)	1	Percentage	2018	21.5	2015	22.1	INE			
Population at risk of relative poverty (income < 60 % of median) with imputed rent		Percentage	2018	19.1	2015	19.5	INE			
Indicator 1.2.2 Proportion of men, women and children of all ages living in poverty in all its dimensions according to national definitions										
Population at risk of poverty or social exclusion: AROPE indicator	z	Percentage	2018	26.1	2015	28.6	INE
