email

Abstract

The presentation focuses on a recent experience in training with the GSBPM addressed to Mediterranean Countries within the framework of MEDSTAT IV (Rome, July 2017).

GSBPM has been used in many Mediterranean Countries to improve the statistical processes. The training course was aimed at strengthening the knowledge and the usage of GSBPM.

The presentation is twofold: on one side, it will show use-cases for the GSBPM in some Countries participating in the training and on the other it will describe how the GSBPM can be used in cooperation training programmes as a common framework for modernisation work.

More specifically we will show following use-cases:

- in Palestine GSBPM is used to redesign and standardise all surveys
- in Israel GSBPM is the basis for the quality audit and for the review of surveys costs
- in Tunisia GSBPM was used to redesign the organization of INS"
