### ***Abstract***

Statistics Norway started in 2017 a large modernization effort, where we want to establish a new, modernized IT-platform, a new way of managing data in production and consolidate our production process, to meet future requirements, and to make sure we'll be able to utilize new data sources, and establish new statistical products in an agile way. The standard models developed in cooperation with other statistical offices facilitated through UNECE is an important corner stone of this modernization effort.

This presentation will give you an overview over our modernization effort through our 2022 vision, and how the different models, like GAMS0, GSBPM, GSIM, CSPA LIM, and CSPA is being operationalized.
