Economic Commission for Europe

Steering Committee on Trade Capacity and Standards

Fourth session

Geneva, 3-4 May 2018

Item 5 of the provisional agenda

Country follow-up to Economic Commission for Europe studies on regulatory and procedural barriers to trade

Follow-up on Economic Commission for Europe countries studies: Republic of Moldova

Summary

As part of its broader effort to increase the trade sector's contribution to economic development, the Government of the Republic of Moldova requested the Economic Commission for Europe (ECE) to conduct a study on regulatory and procedural barriers to trade in the country. Completed in 2017, the study provided a number of recommendations, which were drafted in consultation with the Government and the private sector.

The recommendations were integrated in their entirety into the Government's National Action Plan for Trade Facilitation, which was adopted in December 2017 pursuant to Government Decision No. 1065. The Plan comprises ninety one actions divided into thirty five thematic chapters, with an estimated budget of over Euro 137.1 million, and will be implemented by fourteen State agencies with the support of the National Trade Facilitation Committee. The ECE is working closely with the Government and Permanent Mission of the Republic of Moldova to the United Nations Office in Geneva to create the required partnerships for supporting the successful implementation of the strategy.

This document contains the National Action Plan for Trade Facilitation of the Republic of Moldova. It was prepared upon the request of the Government to brief member States on achievements to date in implementing the recommendations emerging from the study.

The document is presented to the Steering Committee on Trade Capacity and Standards for decision. The recommendations emerging from the ECE study are provided in the Annex.

Assistance of international partners.	OEC established and accredited; Proficient testing at national level

Annex

ECE Recommendations for removing regulatory and procedural barriers to trade in the Republic of Moldova

Area	Recommendations
Transparency	1. Consolidate public-private sector consultative mechanisms.
	1.1 Assign the responsibility for supporting public private consultations to a single agency. The agency could serve as the national trade facilitation committee in fulfillment with the Agreement on Trade Facilitation. In assigning the single agency, the emphasis should be on capitalizing on existing mechanisms as opposed to establishing a new mechanism/ institution from scratch.
	1.2 Establish a reference framework for guiding discussions on the removal of non-tariff barriers. The reference framework should go beyond addressing customs and at the border issues to target behind the border bottlenecks (especially those stemming from shortfalls in the quality assurance system), and involve special emphasis on addressing the obstacles created from the interplay between behind and at the border issues and concerns. The ECE trade facilitation roadmap guidelines provide useful parameters in the area of trade facilitation.
	2. Bolstering the information dissemination function
2.1 Develop the institutional websites of all State agencies, so that they could provide up to date information on applicable regulations, procedures and price lists pertinent to their respective areas. Related to this are internal orders, particularly the Moldovan Customs Service internal orders that were singled out by traders. The Moldovan Customs Service internal orders should be streamlined and published on time.	
2.2 Consider establishing a trade portal, which provides more detailed information on trade related rules and procedures, particularly in relation to their links to regional agreements and implications for both productive and trade activities. The private sector must be able to access, in one place, comprehensive information about existing trade-related requirements; consequential changes to legislation, regulations, procedures, fees and forms; the timing of these changes; the areas in which no change will be required and their implications.	
2.3 Consider establishing call centres and help desks in key market support institutions and State agencies to assist traders in gaining a proper understanding of applied rules and regulations and their implications. The help desks should be equipped these with the required expertise skills, ICT tools and training materials to help them guide the traders.	
2.4 In parallel, there is a need for awareness raising effort to familiarize traders with the terms and implications of the Deep and Comprehensive Free Trade Area (DCFTA) with the European Union (EU): (i) organize media campaigns and mobilization workshops to familiarize traders with the DCFTA and its implications; and, (ii) prepare explanatory materials on the requirements that the enterprises need to meet to reap benefits from the DCFTA , the new procedures that will be set in place to govern trade and the progress made in bringing the national system up to the DCFTA requirements and the implications of these for regional and global integration.	
Information requirements and trade documents	3. Address instances of repetitive submission of documentary requirements, including those associated with commercial exchange between the two banks of River Nistru
	The information requirements and support documents for each trade certificate/license should be reviewed, with a view to: (i) maintaining only those support documents that provide direct and pertinent information for the certificate/license in question; and (ii) ensuring that all support documents are submitted only once. An immediate step for guiding this reform measure would be to conduct a detailed examination of inter-agency procedures and associated documentary requirements using the business process analysis.
	4. Promote the increased use of e-documents:
	4.1 Further develop the ASYCUDA <i>World</i> system to allow for extending online submission of customs declarations to other customs regimes such as transit, warehouse, temporary admission, processing and free zone.

<i>Area</i>	<i>Recommendations</i>
	<p>4.2 Establish training programmes for familiarizing traders with the use of e-documents.</p> <p>4.3 Further develop the customs brokerage industry (see below)</p> <p>5. Further develop the existing system of testing laboratories. This will reduce the waiting time and costs associated with obtaining conformity and quality certificates (see recommendations below).</p>
At the border control and customs clearance	<p>6. Provide intensive training for border control agencies on how best to reconcile trade facilitation concerns with revenue generation.</p> <p>7. Revise the customs code to ensure harmonization with the Union Customs Code (UCC) of the EU. This will be essential for guiding key reform efforts (e.g., the Authorized Economic Operator-AEO-scheme which is being developed by Customs and the migration to a paperless trading environment as the UCC provides for mutual recognition of AEO Certificates) and for addressing a number of issues raised by transport operators (e.g., the transit times for T1 consignments imposed by customs which was seen as arbitrary). In 2017, the Government was in the process of drafting a new Customs Code, and this effort should be accorded priority by international development partners. Assistance should be also provided for supporting the drafting of provisions for implementing the new Code, including secondary customs legislation that is fully harmonized with the EU provisions.</p> <p>8. Improve the customs valuation process:</p> <p>8.1 The Moldovan Customs Service (MCS) should ensure that tariff classification of goods is determined through the use of the General Rules of Interpretation and the Legal Notes to the Harmonized System (HS) Nomenclature, as required under the HS Convention.</p> <p>8.2 The national customs tariff system (TARif vamal Integrat al republicii Moldova- TARIM) should be regularly updated to reflect changes to technical and other non-tariff measures</p> <p>8.3 Further mechanisms should be established to ensure strict application of the World Trade Organization (WTO) rules on Customs Valuation,¹⁷ and develop customs advance rulings service.</p> <p>9. Undertake a thorough review of the risk parameters and profiles in the Customs Integrated Information System. The aim should be to ensure a prompt, meaningful and lasting overall increase in the percentage of cargo assigned to the green channel, and a decrease in that assigned to the red channel. The review should be conducted with the principles of trade facilitation in mind: (i) high risks should be justified with concrete historical data; and, (ii) local risk profiles should be developed for individual customs control points to reflect the specific control environment at each, and the results of their practical application should be progressively used to update and adjust the central risk management system. Particular importance should be given to the development of information systems that would allow for analyzing data and creating efficient risk analysis tools. A pre-arrival information exchange with transport companies should be established as well as the concept of segmentation of traders.</p>

¹⁷ Existing legislation integrates the principles of the WTO Valuation Agreement (See Customs Code of the Republic of Moldova) and provides for uniform and transparent rules for determining customs value (See Government Decision No..974 of 15 August 2016 approving the Regulation on the Declaration of Customs Value of Goods, which establishes uniform and transparent rules for determining customs value that are consistent with the EU legislation).

10. MCS should be assisted to further develop the AEO scheme,¹⁸ with a view to issuing full approvals incorporating customs simplifications for reliable traders.

Safety and security approvals, especially for transport operators, forwarders, and agents, have little or no impact on trade facilitation.

10.1 The emphasis should be firmly placed on risk management, with measures put rapidly in place to select and approve AEOs properly, thus giving real assurance that their cargo can be subjected to minimal intervention at the frontier and inland, with subsequent post-clearance controls to ensure compliance, and re-appraise risk.

10.2 The MCS should be supported in its efforts to implement Mutual Recognition of AEO program with EU, CEFTA and other key economic partners in accordance with the World Customs Organization (WCO) Framework of Standards to Secure and Facilitate Global Trade (SAFE).

10.3 The MCS should be assisted in developing procedures for simplifying customs declaration, including simplified declarations and incomplete declarations. Such procedures will allow economic operators to submit customs declarations in a simplified format with less data requirements.

11. In parallel with the development of the AEO scheme, the MCS should be supported in its efforts to:

11.1 **Further develop its post-clearance audit**, as this will allow for undertaking systems-based trader audits and, thereof, considered examination of the commercial processes and systems that lie behind the customs duty declared at importation; and then to use the findings to review previous risk-based judgments, and if necessary adjust the parameters in the risk management system. This is a more holistic approach; a more reliable means of controlling tariff classification and declared value; and provides concrete incentives for voluntary compliance on the part of traders.

11.2 Develop and implement the pre-arrival declaration procedure

12. Reduce at the border charges

12.1 Measures should be introduced so that no charges are raised for loading/ unloading and handling at border crossing points (BCPs) and inland control points (ICPs). In this respect, it is important to examine the costs/effectiveness of the current services, whereby the MCS, which does not have its own facilities for cargo examination, uses commercial premises.

12.2 The routine weighing of goods vehicles on entry and exit from the Republic of Moldova, for a charge, should cease if the carriers have valid IVWC for the journey in question.

13. Adopt a gradual approach to Single Window (SW) development¹⁹

The experiences of other countries show that unless developed within the context of a systemic approach with implementation sequenced to correspond to national capacities, the SW facility will be of limited benefits to traders. Below are the main elements of such an approach:

- Create an inter-agency coordinating committee to oversee the design and implementation of the SW facility.

¹⁸ As stipulated in Law No.281 of 16 December 2016 on amending and supplementing certain acts, the AEO concept is fully in line with the authorization procedure established under the UCC of the EU.

¹⁹ A SW is “a facility that allows parties involved in trade and transport to lodge standardized information and documents with a single entry point to fulfil all import, export, and transit-related regulatory requirements. If information is electronic, then individual data elements should only be submitted once”. See UN/CEFACT (United Nations Centre for Trade Facilitation and Electronic Business) Recommendation No. 33. The proposed steps build on UN/CEFACT Recommendation on the establishment of

Area	Recommendations
	<ul style="list-style-type: none"> - Conduct detailed business process analysis within and across the State agencies involved in supporting export and import activities. The analysis should focus on: (i) document flow; (ii) data flow and data harmonisation issues; (iii) and, the regulatory requirements of each SW agency; (iv) and, the administrative procedures for issuing trade documents - Remove all documents, which serve little real purpose and could be eliminated to help streamline the clearance process - Align all existing trade documents, including support documents, into a single electronic form. This exercise has to be undertaken in each agency, and followed by a similar exercise to assess the possibility of further harmonization among the different documents. - Next, a paperless electronic documentation system has to be installed in each agency, and ensure interoperability amongst the numerous information platforms of the State agencies. - In parallel to the above, provide advanced training for staff on electronic business standards (such as the UN/CEFACT eBusiness standards) - Conduct a feasibility study to establish the IT needs (including management information systems and hardware equipment) of the Customs and other Single Window agencies. - Based on the above, establish a general conceptualization of the SW facility, including the basic elementary components in consultation with Customs and the SW agencies. This exercise is important as it will provide the Government with a reference document to guide decisions on the detailed technical features of the SW facility. - Implementation should be phased and could start with the development of some elementary/basic components, in order to provide solid grounds for full implementation at a later stage. In particular, the first phase should focus on developing a pilot SW or a “Trust Model” (i.e. foundations of the platform to provide digital certificates and electronic signatures). During the first stage, the SW could cover trade of the goods which are subjected to the customs, transport, veterinary, phytosanitary and sanitary inspections. During the second stage second stage of the project the SW will cover trade in goods of all types. Alternatively, the government may consider including certain agencies during Stage I, leaving the task of connecting the remaining agencies during stage II. <p>14. Consider a more focused approach to the development of border crossing points. Rather than spreading efforts too thin, concentrate in the short term on:</p> <p>14.1 Widening entry access and providing parking space away from the traffic lanes, as an immediate measure for reducing congestion and queues.</p> <p>14.2 Improving traffic management through (i) the proper segregation, into separate lanes, of trucks, buses and cars; and (ii) providing a ‘fast track’ lane, from the point of entry to the BCP, for trucks carrying consignments of transit and AEO goods; and, (c) the introduction of non-intrusive inspection equipment, as one means of reducing the requirement for physical examination of goods.</p> <p>15. Intensify efforts to modernize customs infrastructure</p> <p>15.1. Equip at the border and internal customs posts with basic facilities for conducting control functions; modern information technology (IT) systems (hardware and software); and, non-intrusive control equipment (scanners, video surveillance system).</p> <p>15.2 At the same time, additional support is needed to ensure the management, record-keeping, maintenance and assessment of the modern control equipment and IT systems. This is important for enhancing efficiency.</p>

single window facilities (No.33); data simplification and standardization for international trade (No. 34); and; establishing a legal framework for international trade single window (No. 35).

<i>Area</i>	<i>Recommendations</i>
Further develop the brokerage industry	16. A proper system for testing, training, licensing, accrediting, and monitoring customs brokers should be put in place.
Transit trade	<p>17. The existing MCS practice of routinely controlling transit traffic at border crossing points (BCPs), whether it is passing through the country or destined for an internal crossing point (ICP) under the internal transit procedure, should cease. Transit documents should be examined and truck seals broken and re-sealed only in cases where a high risk has been properly assessed.</p> <p>18. The arbitrary internal transit times for consignments should be relaxed, and be guided by a detailed methodology that allow for proper consideration of the different factors influencing journey times and diversion risk levels.</p> <p>19. MCS controls over transit traffic should be risk-based and selective. The introduction of the EU's New Computerized Transit System in due course, and eventually a facility which permits advance declarations of cargo data, will make the process of risk management much easier, but these are not pre-requisites. Immediate measures need to be taken to ensure consistent application of the TIR Convention and implement selective control over high-risk transit cargo. Trucks could be allowed to proceed through BCPs using separate 'fast track' lanes, as those belonging to AEO operators. A similar risk-based, selective approach to the control of internal transit traffic should be adopted along with the used of sealed 'safe packages' for the accompanying transit documents.</p> <p>20. Transit trucks should be allowed to proceed through BCPs using separate 'fast track' lanes, as those belonging to AEO operators are allowed to do. Selective control over transit cargo properly assessed as high-risk should be the norm</p> <p>21. Routine MCS checks on outbound cargo at the border with Romania, which are subsequently repeated at importation on the other side of the border, should be progressively withdrawn in favor of joint cargo controls similar to those exercised at Moldova's border with Ukraine. In the long term, the MCS and its counterpart service in Romania should be encouraged to develop arrangements for the mutual recognition of customs controls.</p> <p>22. Accord priority to linking ASYCUDA World system to the EU New Computerized Transit System, since ASYCUDA World is fully operational nationwide and has a built it transit module.²⁰</p>

²⁰ASYCUDA is the United Nations Conference on Trade and Development (UNCTAD) web-based Automated System for Customs Data and serves as to serve as the backbone for the Customs Integrated Information System (CIIS).

Area	Recommendations
Transport and logistical services	<p>23. The development of multi-modal logistics and facilities should be accorded priority treatment. This is an area that is being relegated secondary importance at a time when even the most modest intervention could bring about immediate results.</p>
Technical regulations	<p>24. A proper system for testing, training, licensing, accrediting, and monitoring freight forwarders should be put in place. The administration of the scheme should be given to a suitable representative body, subject to independent external accreditation (e.g., by the International Federation of Freight Forwarders Associations). Freight forwarders' licenses should be renewable annually, subject to satisfactory performance.</p> <p>25. Strengthen national technical regulations development processes</p> <p>25.1 Intensify capacity-building efforts in the area of technical regulation development through targeted training courses. The courses should be geared to develop the skills of new comers as well as existing staff, and feature a combination of specialized, individual courses for policy makers and regulators and generic courses that correspond to the common interests and needs of the two groups.</p> <p>25.2 Consider reviewing existing institutional arrangements to ensure simultaneous and equal involvement of regulators and those responsible for regulatory impact assessment in the development of technical regulations.</p> <p>25.3 Consider establishing technical exchange and collaboration arrangements with partners in EU countries to support of the technical regulations development functions. Such arrangements could include, among others, collaboration in drafting technical regulations, on the job training for the relevant staff and the exchange of information in the form of technical reports, visits and joint experts meetings.</p> <p>26. Strengthen regulatory impact assessment (RIA) processes</p> <p>26.1 Consider outsourcing RIA to private research centers and universities. While this option will create additional pressures on the public purse, it is critical since the preparation of technical regulations is a complex undertaking that requires multidisciplinary skills that are not and cannot be made available within competent authorities. If properly structured (e.g., on the job training to competent authorities, ensuring that RIAs are conducted in collaboration with the relevant staff), outsourcing could bring new methods and additional knowledge.</p> <p>26.2 Accord priority to developing a methodology for guiding the regulatory impact assessments on micro enterprises and SMEs.</p> <p>26.3 In parallel, consider establishing a centralized body for impact assessments, and equip it with expertise skills in the areas of industrial economics, cost-benefit analysis, EN standards and the different aspects of EU safety, health and environmental protection requirements. The centralized body, which could be placed under a line Ministry, should have its own training facility and operate according to a business plan that would allow it to achieve a certain degree of self-sufficiency.</p>
Standardization	<p>27. Strengthen standard setting processes with expertise skills</p> <p>27.1 Assist the national Standardization Institute (NSI) in its efforts to withdraw old standards (Commonwealth of Independent States interstate regional standards -GOST) that are not consistent with the state of the art and are irrelevant to the country's market.</p> <p>27.2 In parallel to the above, consider creating a training facility on standardization processes within NSI, and equip it with sector focused rigorous training materials targeting the enterprise sector. This will ensure continuous training and responsiveness to national needs. In this respect, ECE Working Party on Regulatory Cooperation and Standardization Policies (WP.6) recommendation Education on Standards-Related Issues (Recommendation I) is of direct relevance.</p>

<i>Area</i>	<i>Recommendations</i>
	27.3 NSI should be supported to intensify its participation in the work of European and international standard setting organizations and achieve full membership in these organizations.
Conformity assessment	<p>28. Develop the competence of the National Accreditation Centre (MOLDAC) in new areas, including:</p> <p>28.1 Certification of persons and verification bodies and further improve existing competences as follows:</p> <ul style="list-style-type: none"> - Proficiency testing according to the general requirements for the competence of providers of proficiency testing schemes and for the development and operation of proficiency testing schemes (ISO/IEC 17043). - Verification bodies according to the principles and requirements for bodies that undertake verification of greenhouse gas (GHG) assertions (EN ISO 14065:2013) - Inspection according to the requirements for the competence of bodies performing inspection and for the impartiality and consistency of their inspection activities (ISO/IEC 17020:2012) - Product certification according to the requirements for bodies certifying products, processes and services (EN ISO/IEC 17065:2012). <p>28.2 Product certification bodies. New accreditation schemes are needed to allow for covering all the products under the European Cooperation for Accreditation (EA) Multilateral Recognition Arrangement (MLA).</p> <p>29. Further improve accreditation procedures and processes</p> <p>Improve accreditation schemes by line Ministries to ensure compliance with international best practices, with a special emphasis on allowing for withdrawing certificates in cases of non-compliance and on ensuring the independence of the accreditation processes.</p> <p>30. Further develop conformity assessment bodies (CABs) under government agencies</p> <p>30.1 The National Food Safety Agency (ANSA), the Ministry of Health and Customs as well as the newly established SE National Centre for Verification and Certification of Vegetable Products and Soils need to be equipped with modern testing equipment and expertise knowledge on the application of international and/or European standards and technical regulations. In the case of ANSA, training should feature a focus on consolidating overall administrative/management systems and ensuring robust the monitoring and auditing of the activities throughout the country.</p> <p>30.2 Equip laboratories with certified reference materials</p> <p>30.3 Equip CABs with the required financial resources to attract and retain qualified staff and obtain the required supplies. In this respect, reconsider the requirement of transferring 50 percent of the laboratories' internal revenues to the public purse.</p> <p>30.4 Streamline existing reporting systems for laboratories which operate under line Ministries. For example, the laboratories could report to one line Ministry only, which could, in turn, report to the Ministry of Finance.</p> <p>31. Further develop the market surveillance function</p> <p>31.1 Equip the Consumer Protection Agency (CPA) and NFSA with the required financial resources to attract and retain qualified staff.</p> <p>31.2 Provide CPA and ANSA staff with advanced training on the different aspects of EU requirements, particularly those established under the hygiene package and the general requirement of putting in place a liability system for defective products.</p> <p>31.3 Complete the preparations for launching the Quick Alert System for Food and Feed (SRAAF). In particular, ratifying the law for establishing the system and developing the capacities of the different agencies that will be linked to it, including the Ministries of Agriculture</p>

Area	Recommendations
	and Food Industry Ministry, Health, Interior Ministry, Customs Service, CPA and the ANSA. These agencies should be equipped with the required IT capacity and expertise knowledge on the EU safety rules and requirements
Metrology	<p>32. Obtain international recognition of metrological competence, as this is fundamental to international acceptance of test results</p> <p>32.1 It is reasonable and prudent to accord priority to achieving competencies that best serve existing goods and services and potential industries with high export potential. Resources should be made available to achieve these competencies and should be complemented by efforts to further develop legal metrology to cover all base units, starting with those related to priority sectors.</p> <p>32.2. Further develop the quality management system of the National Metrology Institute (NMI) in accordance with SR EN ISO 9000: 2006, and equip it with a quality management center and research facilities in the four areas of metrology, including engineering measurement, physical measurement, material and chemical measurement and analytical instrumentation measurement.</p> <p>32.3 Consider diversifying NMI services to allow for achieving a certain degree of self-sufficiency. This is important for enabling the institute to retain qualified staff.</p>
Regional integration	<p>33. In the short term, it would be more conducive to maintain the existing free trade area (FTA) arrangements with the EU and CIS, while scaling up the trade agreement with CIS through including additional deep integration provisions. Joining either block sometime in the future, once enterprises are capable of fulfilling market entry requirements in quality and safety and once regulatory and procedural trade barriers are removed, would bring more benefits.</p> <p>The Government considers the DCFTA with the EU, the FTA with CIS, the Central European Free Trade Area and the FTA signed between the Republic of Moldova and Turkey as complementary cooperation arrangements, which, together, provide the country with the opportunity to establish a conducive environment for business development, investment attraction, and consolidating a development hub between the east and west. The Republic of Moldova is also examining emerging opportunities from establishing cooperation arrangements with other market such as China, Egypt and the European Free Trade Association (EFTA) countries.</p>
Enterprise development	<p>34. Further improve clustering initiatives for supporting the development of the existing free economic zones and industrial parks in the Republic of Moldova. These initiatives should be geared towards fostering vertical collaboration as well as horizontal cooperation between enterprises operating at the same (or similar) stages in the production chain. To ensure sustainability, the initiatives need to be hosted in market support institutions and complemented by linkages programmes to integrate the networks with regional value chains. Such programmes should target both labour-intensive industries and those with technology intensive activities and could be tailored to create: (i) horizontal collaboration, such as sharing the costs of expensive equipment or research and development; (ii) vertical collaboration through facilitating the decentralization of the production process; and/or (iii) exchange of information on technology and common problems.</p> <p>35. Consider launching investment retention (aftercare) programmes to retain existing local investments</p> <p>36. Establish guarantee credit schemes for facilitating small and medium enterprises (SMEs) access to external sources of finance. Commercial banks are risk averse by definition and will always consider SMEs as un-credit worthy</p>
Agri industries	<p>37. Launch targeted technical assistance programmes for food producers to enable them to implement the Hazard Analysis and Critical Control Points (HACCP) and the Good Manufacturing Practices (GMP) principles.</p>

38. Launch targeted, sector- focused programmes to develop the productive capacity of farmers and industries.

Priority should be accorded to those involved in cultivating/processing products that are subject to transitional periods for trade liberalization with the EU, including: pasta, pepper, corn (three years); cheeses, vegetables (tomatoes, cucumbers, etc.), fruits (cherries, nectarines, raspberries, wines, juices, jams) and bakery products (five years); and milk, meat and fresh cherries (ten years). In this respect, the recently launched European Neighbourhood Programme for Agriculture and Rural Development (ENPARD) constitutes an important step in this direction.²¹ Interviewed stakeholders noted that the strength of this programme lies in its balanced emphasis on capacity building and public-private sector consultations, noting that this will contribute to familiarizing farmers, producers and civil society organizations with the ongoing reforms and ensuring targeted interventions that address the particular concerns of communities in the different regions. Such programmes could also feature an emphasis on familiarizing traders with the ECE Working Party on Agricultural Quality Standards (WP.7), which covering a wide spectrum of products under the following clusters: fresh fruit and vegetables (FFV); dry and dried produce (DDP); seed potatoes; meat, eggs and egg products; and cut flowers.

²¹ In 2016, the Republic of Moldova ratified the bilateral agreement with the European Commission for receiving €64 million to support agricultural policy under the European Neighbourhood Programme for Agricultural and Rural Development (ENPARD). The programme is geared to support the modernisation of agri-food and food chains; policy dialogue; and public services in rural areas. Implementation commenced late 2016, after much delays.
