**Economic Commission for Europe****Inland Transport Committee****World Forum for Harmonization of Vehicle Regulations****173rd session**

Geneva, 14-17 November 2017

Item 4.8.8 of the provisional agenda

**1958 Agreement:****Consideration of draft amendments****to existing UN Regulations submitted by GRSP****Proposal for Supplement 3 to the 01 series of amendments to  
UN Regulation No. 129 (Enhanced Child Restraint Systems)****Submitted by the Working Party on Passive Safety\***

The text reproduced below was adopted by the Working Party on Passive Safety (GRSP) at its sixty-first session (ECE/TRANS/WP.29/GRSP/61, paras. 34, 35 and 44). It is based on ECE/TRANS/WP.29/GRSP/2017/11, as amended by Annex VI to the report, on ECE/TRANS/WP.29/GRSP/2017/15, as amended by Annex VI to the report and on ECE/TRANS/WP.29/GRSP/2017/4, not amended. It is submitted to the World Forum for Harmonization of Vehicle Regulations (WP.29) and to the Administrative Committee AC.1 for consideration at their November 2017 sessions.

---

\* In accordance with the programme of work of the Inland Transport Committee for 2016–2017 (ECE/TRANS/254, para. 159 and ECE/TRANS/2016/28/Add.1, cluster 3.1), the World Forum will develop, harmonize and update Regulations in order to enhance the performance of vehicles. The present document is submitted in conformity with that mandate.

## Proposal for Supplement 3 to the 01 series of amendments to UN Regulation No. 129 (Enhanced Child Restraint Systems)

Paragraph 2.3.1., amend to read:

- "2.3.1.        *"i-Size"* (Integral Universal ISOFIX Enhanced Child Restraint Systems) is a category of Enhanced Child Restraint System primarily designed for use in all i-Size seating position of a vehicle, as defined and approved according to UN Regulations Nos. 14 or [XX] and 16."

Paragraph 2.5., amend to read:

- "2.5.        *"ISOFIX"* is a system that provides a method of connecting an Enhanced Child Restraint System to a vehicle. It is based on two vehicle anchorages and two corresponding attachments on the Enhanced Child Restraint System in conjunction with a means to limit the pitch rotation of the Enhanced Child Restraint System. All three vehicle anchorages are to be approved according to UN Regulation No. 14. or UN Regulation No. [XX]."

Paragraph 2.7., amends to read:

- "2.7.        *"Specific vehicle ECRS"*
- 2.7.1.        *"Specific vehicle ISOFIX"* is a category of Integral Enhanced Child Restraint System connecting to specific vehicle types. All vehicle anchorages are to be approved according to UN Regulation No. 14 or UN Regulation No. [XX]. It is also an indication for Enhanced Child Restraint Systems including dashboard as a vehicle contact zone.
- 2.7.2.        *"Specific vehicle booster seat"* is a category of Non-Integral Enhanced Child Restraint System, with integrated backrest, for use in specific vehicle types, with vehicle anchorages approved according to UN Regulation No. 14 or UN Regulation No. [XX]. This category includes "Built-in booster seats"."

Paragraph 2.11., amend to read:

- "2.11.        *"ISOFIX anchorage system"* means a system made up of 2 ISOFIX low anchorages fulfilling the requirements of UN Regulation No. 14 or UN Regulation No. [XX] which is designed for attaching an ISOFIX Enhanced Child Restraint System in conjunction with an anti-rotation device."

Paragraph 2.12., amend to read:

- "2.12.        *"Anti-rotation device"* means a device intended to limit the rotation of the Enhanced Child Restraint System during a vehicle impact and consisting of:
- (a) A top-tether strap; or
  - (b) A support-leg.
- Meeting the requirements of this Regulation and fitted to an ISOFIX anchorage system and ISOFIX top tether anchorages or vehicle floor contact surface meeting the requirements of UN Regulation No. 14 or UN Regulation No. [XX]."

Paragraphs 2.13. and 2.13.1., amend to read:

- "2.13.        *"ISOFIX top tether strap"* ...
- 2.13.1.        *"ISOFIX top tether anchorage"* means a feature fulfilling the requirements of UN Regulation No. 14 or UN Regulation No. [XX], such as a bar, located in

a defined zone, designed to accept an ISOFIX top tether connector and transfer its restraint force to the vehicle structure."

*Paragraph 2.13.3.*, amend to read:

"2.13.3. "ISOFIX top tether hook" means an ISOFIX top tether connector typically used to attach an ISOFIX top tether strap to an ISOFIX top tether anchorage as defined in figure 3 of UN Regulation No. 14 or UN Regulation No. [XX]."

*Paragraph 2.15.3.*, amend to read:

"2.15.3. "Support-leg foot assessment volume" describes a spatial volume which denotes both the extent and limitations for the movement of the support-leg foot. It corresponds to the support-leg foot assessment volume for vehicles, as defined in Annex 10 of UN Regulation No. 14 or UN Regulation No. [XX], Annex 5."

*Paragraph 2.16.*, amend to read:

"2.16. "CRF pitch angle" is the angle between the bottom surface of the fixture "ISO/F2 (B) as defined in UN Regulation No. 16 (Annex 17, Appendix 2, Figure 2) and the horizontal Z plane of the vehicle as defined in UN Regulation No. 14 (Annex 4, Appendix 2) or UN Regulation No. [XX] (Annex 3, Appendix 2), with the fixture installed in the vehicle as defined in UN Regulation No. 16 (Annex 17, Appendix 2)."

*Paragraph 2.51.1.*, amend to read:

"2.51.1. "ISOFIX position" means a location as defined in UN Regulation No. 14 or UN Regulation No. [XX]."

*Insert new paragraph 4.9.*, to read:

"4.9. An impact shield that is not permanently attached to the seat shall have a permanently attached label to indicate the brand and model of the Enhanced Child Restraint System to which it belongs and the size range. The minimum size of the label shall be 40 x 40 mm or the equivalent area."

*Insert new paragraph 4.10.*, to read:

"4.10. Enhanced Child Restraint Systems shall have a permanently attached label to inform the user of the appropriate method of restraint of the child over the entire stature range declared by the manufacturer.

The label shall be visible to the person installing the Enhanced Child Restraint System in a vehicle and when a child is seated in the restraint. The label shall have a minimum size of 40 x 60 mm or the equivalent area and shall feature a pictogram of each restraint configuration adjacent to the stature range."

*Insert new paragraph 5.5.*, amend to read:

"5.5. The approval mark prescribed in paragraph 5.4. above may not be replaced by an Unique Identifier (UI) as referred to in Schedule 5 of the 1958 Agreement."

*Paragraphs 5.5., 5.6. and 5.7. (former)*, renumber as 5.6., 5.7. and 5.8. respectively.

*Paragraph 6.2.1.4.*, amend to read:

"6.2.1.4. To prevent submarining, either by impact or through restlessness, a crotch strap shall be required on all integral forward-facing restraints incorporating

an integral harness belt system. Enhanced Child Restraint Systems which incorporate a shield instead of a harness shall ensure that the shield extends across the full width of the child's body and sits low on the pelvis."

*Paragraph 6.2.1.8.*, amend to read:

"6.2.1.8. With the crotch strap attached and in its longest position if adjustable, it shall not be possible to adjust the lap strap to lie above the pelvis of both the smallest and largest dummy within the size range covered by the approval. For all forward-facing restraints, it shall not be possible to adjust the lap strap to lie above the pelvis of both the smallest and largest dummy within the size range covered by the approval.

An impact shield shall be adjustable in so that it comes in contact with the pelvis and abdomen of the smallest and largest dummy within the size range covered by the approval, leaving no gap between the impact shield and the dummy."

*Paragraph 6.3.2.1.*, amend to read:

"6.3.2.1. Internal geometric characteristics

The Technical Service conducting the approval tests shall verify that the internal dimensions of the Enhanced Child Restraint System conform to the requirements of Annex 18. The minimum dimensions for shoulder breadth, hip breadth and sitting height shall be fulfilled simultaneously for any stature within the size range declared by the manufacturer.

Integral Enhanced Child Restraint System shall also fulfil the minimum and maximum dimensions of shoulder height, for any stature within the size range declared by the manufacturer.

Integral Enhanced Child Restraint Systems that feature an impact shield shall also be capable of being adjusted to fulfil:

- (a) The 5<sup>th</sup> percentile upper leg thickness and 5<sup>th</sup> percentile abdomen depth, simultaneously to the 5<sup>th</sup> percentile shoulder height;
- (b) The 95<sup>th</sup> percentile upper leg thickness and 95<sup>th</sup> percentile abdomen depth, simultaneously to the 95<sup>th</sup> percentile shoulder height, shoulder breadth, hip breadth and sitting height.

For any stature within the size range declared by the manufacturer.

Non-integral Enhanced Child Restraint System shall also fulfil the maximum dimensions of shoulder height, for any stature within the size range declared by the manufacturer."

*Paragraph 6.6.2.1.*, amend to read:

"6.6.2.1. For all devices with backrests, the areas defined in Annex 14 to this Regulation, when tested according to Annex 13, shall give a peak acceleration of less than 60 g. This requirement applies also to areas of impact shields which are in the head strike area as defined in Annex 14."

*Insert new paragraphs 6.6.4.1.8. to 6.6.4.1.8.2.*, to read:

"6.6.4.1.8. In the case of a convertible integral Enhanced Child Restraint System that is equipped with a means of restraining the child that is intended for one orientation only, the dynamic test shall be carried out as follows:

- 6.6.4.1.8.1. With the means of restraint used in the orientation for which it is intended;  
and
- 6.6.4.1.8.2. With the means of restraint used in the orientation for which it is not intended, unless a mechanism is provided to prevent such incorrect use."

*Paragraph 6.6.4.1.1.1.*, amend to read:

"6.6.4.1.1.1. Where a test is conducted in accordance with paragraph 6.6.4.1.6.2. or paragraph 6.6.4.1.8.2 above, a tolerance of +10 per cent shall be applicable to the head excursion value distance between Cr point and plane AB."

*Paragraph 6.6.4.1.2.1.*, amend to read:

"6.6.4.1.2.1. Head excursion: no part of the head of the dummy shall pass beyond the planes FD, FG and DE, as shown in Figure 2 below. This shall be judged up to 300 ms or the moment that the dummy has come to a definitive standstill whatever occurs first.

Except when testing using Q6 dummy where:

The value in relation to the FD plane is 840 mm.

Where a test is conducted with paragraph 6.6.4.1.6.2. or paragraph 6.6.4.1.8.2. above, only the second configuration test results without 100 mm diameter bar will be considered.

Figure 2

**Arrangement for testing a rearward-facing device, not supported by the dashboard**

*Paragraph 6.6.5.1.*, amend to read:

"6.6.5.1. Buckle assemblies, retractors, adjusters and lock-off devices that are liable to be affected by temperature, shall be subject to the temperature test specified in paragraph 7.2.7. below. This requirement is applicable to any such components that are found on the Enhanced Child Restraint System, regardless of the means of restraint."

*Paragraph 6.7.*, amend to read:

"6.7. Provisions applicable to individual components of the restraint

This paragraph is applicable to any such components that are found on the Enhanced Child Restraint System, regardless of the means of restraint."

*Paragraph 6.7.1.8.2., amend to read:*

"6.7.1.8.2. Depending on the mass limit declared by the manufacturer, a ~~harness~~ buckle shall withstand:"

*Paragraph 6.7.2.7., amend to read:*

"6.7.2.7. An adjuster mounted directly on the Child Restraint System shall be capable of withstanding repeated operation and shall, before the dynamic test prescribed in paragraph 7.1.3. undergo a test comprising  $5,000 \pm 5$  cycles as specified in paragraph 7.2.6.1.

An adjuster mounted on a strap shall be capable of withstanding repeated operation and shall, before the dynamic test prescribed in paragraph 7.1.3. undergo a test comprising  $5,000 \pm 5$  cycles as specified in paragraph 7.2.6.2."

*Insert new paragraph 7.1.3.6.5., to read:*

"7.1.3.6.5. The test specified in paragraph 6.6.4.1.8. above is a requirement only for:

7.1.3.6.5.1. The smallest dummy for which the Enhanced Child Restraint is designed, if the means of restraint is an impact shield.

7.1.3.6.5.2. The largest dummy for which the Enhanced Child Restraint is designed, if the means of restraint is a harness."

*Insert new paragraph 7.2.6., to read:*

"7.2.6. Conditioning tests for adjusters"

*Paragraph 7.2.6.(former), renumber as paragraph 7.2.6.1. and amend to read:*

"7.2.6.1. Conditioning test for adjusters mounted directly on a child restraint  
..."

*Insert new paragraph 7.2.6.2., to read:*

"7.2.6.2. Conditioning test for adjusters connected to a strap (not directly mounted to the Enhanced Child Restraint System)

Install the largest dummy for which the restraint is intended, as if for the dynamic test, including the standard slack as specified in paragraph 7.1.3.5. above. Mark a reference line on the strap where the free end of the strap enters the adjuster.

Remove the dummy and place the restraint in the conditioning rig shown in Figure 2, Annex 15.

The strap shall be cycled for a total distance of not less than 150 mm through the adjuster. This movement shall be such that at least 100 mm of strap on the side of the reference line towards the free end of the strap.

If the length of strap from the reference line to the free end of the strap is insufficient for the movement described above, the 150 mm of movement through the adjuster shall be from the fully extended strap position.

The frequency of cycling shall be  $10 \pm 1$  cycles/minute, with a velocity on "B" of  $150 \pm 1$  mm/s.

This process shall be conducted for each adjuster that is part of the retention system of the child within the restraint."

*Paragraph 9.2.1.1.*, amend to read:

"9.2.1.1. Five Enhanced Child Restraint Systems shall be subjected to the dynamic test described in paragraph 7.1.3. above. The Technical Service that conducted the type approval tests shall choose the conditions that produced the maximum horizontal head excursion during the type approval dynamic tests, excluding the conditions described in paragraphs 6.6.4.1.6.2. and 6.6.4.1.8.2. above. All the five Enhanced Child Restraint Systems shall be tested under the same conditions."

*Paragraph 14.3.5.*, amend to read:

"14.3.5. It shall be recommended that any straps holding the restraint to the vehicle should be tight, that any support-leg should be in contact with the vehicle floor, that any straps or impact shields restraining the child should be adjusted to the child's body, and that straps should not be twisted;"

*Paragraph 14.3.6.*, amend to read:

"14.3.6. "The importance of ensuring that any lap strap is worn low down, and that any impact shield is installed properly, so that the pelvis is firmly engaged, shall be stressed;"

*Annex 14*, amend to read:

## "Annex 14

### **Method of defining head impact area of devices with backrests or impact shields and for rearward-facing devices defining the minimum size of side wings**

1. Head impact area
  - 1.1. Definition of backrest head impact area  
Place the device on the test bench described in...
  - 1.2. Definition of impact shield head impact area  
The impact shield head impact area is the whole upper surface of the impact shield, which comprises any surfaces visible from the top, looking down on the shield."

Annex 15, amend to read:

**"Annex 15**

**Description of conditioning for adjusters connected to a strap**

1. Method
  - 1.1. Rigidly clamp the adjuster
  - 1.2. With the strap set at the reference position described in paragraph 7.2.6., withdraw at least 50 mm of strap from the adjuster by pulling on the free end of the strap.
  - 1.3. Attach the adjuster part of the strap to the pulling device A.
  - 1.4. Activate the adjuster (C) and pull at least 150 mm of strap through the adjuster. This represents half of one cycle and puts pulling device A to the maximum strap extraction position.
  - 1.5. Connect the free end of the strap to pulling device B.
2. The cycle is:
  - 2.1. Pull B at least 150 mm while A does not exert tension on the strap.
  - 2.2. Activate the adjuster (C) and pull A while B does not exert tension on the free end of the strap.
  - 2.3. At the end of the stroke, de-activate the adjuster.
  - 2.4. Repeat the cycle as specified in paragraph 6.7.2.7. of this Regulation."

Annex 18, amend to read:

**"Annex 18**

**Geometrical dimensions of Enhanced Child Restraint Systems**

140	76.5	34.2	29.6	43.0	49.7				
145	78.6	35.3	30.8	44.5	51.5	Not allowed for these dimensions and stature over 125 cm			
150	81.1	36.4	32.0	46.3	53.3				

All lateral dimensions are measured under a contact force of 50 N with the devices described in Figure 2 and Figure 3 of this annex and the following tolerances will applied:

Minimum Sitting height:

- (a) Up to 87 cm B - 5 per cent;
- (b) From stature from 87 cm and up to 150 cm B - 10 per cent.

Minimum shoulder height (5 percentile): E1  $_{-2}^{+0}$  cm

Maximum shoulder height (95 percentile): E2  $_{-0}^{+2}$  cm

The mass of the devices described in Figure 2 and Figure 3 of this annex shall be 10 kg  $\pm$ 1 kg

Figure 2

All dimensions in mm

#### Internal geometry assessment method

This method describes how to conduct the internal geometry assessment, as required by paragraph 6.3.2.1., to verify the stature range of the ECRS declared by the manufacturer.

This assessment shall be carried out for each of the following:

- (a) For each ECRS orientation (e.g. rearward and forward facing);
- (b) For each ECRS type (e.g. integral and non-integral);
- (c) For any removable insert (e.g. for use as described by manufacturer's instructions);
- (d) For each occupant restraint method (e.g. harness and shield).

The internal geometry assessment should be conducted with the ECRS placed on a flat surface or connected to a base in the case of ECRS modules.

For integral or non-integral ECRS the device shown in Annex 18, Figure 2 shall be used.

For ECRS with an impact shield the device shown in Annex 18, Figure 3 shall be used.

#### 1. Determining the Minimum Occupant size

The ECRS should be adjusted to fit the smallest occupant (i.e. headrest height, harness height adjustment, appropriate insert, internal padding, impact

shield position), while still fitting within the required ISO volumetric envelope as defined in paragraph 6.3.2.2. of this Regulation.

The measurement device shall then be placed in the ECRS. The device shall be aligned centrally to the ECRS.

All measurements shall be taken with the device base in contact with the seat pan of the ECRS and the device backrest in contact with the backrest of the ECRS.

The measurements shall be taken in the following order:

1.1. Minimum Shoulder Height (E1)

1.1.1. For integral ECRS:

This measurement shall be taken when the top of the shoulder height cylinders of the device are aligned with the lowest harness slot position. For this alignment, the top of the shoulder cylinder shall be aligned perpendicular to the harness webbing outlet in the ECRS backrest.

A tolerance may be subtracted from this measurement to allow the shoulders of the occupant to be lower than the harness shoulder slots.

Either:

(a) If the ECRS instruction manual provided by the manufacturer quantifies the distance that the child's shoulder may be below the harness slots, then this distance shall be subtracted from the minimum shoulder height measurement;

(b) If no distance is specified, a 2 cm tolerance may be subtracted from the minimum shoulder height measurement.

1.1.2. For non-integral ECRS

This measurement shall be taken when the top of the shoulder height cylinders of the device are aligned without interference with the lowest part of the headrest.

1.1.3. For ECRS with an impact shield:

This measurement shall be taken when the top of the shoulder height cylinders of the device are aligned without interference with the lowest part of the headrest.

1.2. Minimum Upper Leg Thickness (G1)

This requirement only applies to ECRS with impact shields.

While maintaining the minimum shoulder height position (E1), the minimum leg measurement shall be measured when the device is adjusted so that the simulated thighs contact the bottom of the impact shield.

1.3. Minimum Abdomen Depth (F1)

This requirement only applies to ECRS with impact shields

This measurement shall be taken whilst maintaining the minimum leg thickness measurement position (G1) and minimum shoulder height position (E1).

The bottom of the simulated abdomen of the device shall be aligned with the top of the simulated thighs.

The abdomen depth shall be measured when the simulated abdomen contacts the shield.

2. Determining the Maximum Occupant Size

Integral ECRS shall be adjusted to fit the largest occupant (i.e. headrest height, harness height adjustment, impact shield position), while still fitting within the required ISO volumetric envelope as defined in paragraph 6.3.2.2.1.

Non-integral ECRS shall be adjusted to accommodate children of 135 cm stature or to the largest size of its declared stature range if the upper limit is below 135 cm (i.e. headrest), while still within the required ISO volumetric envelope as defined in paragraph 6.3.2.2.2.

The measurement device shall then be placed in the ECRS. The device shall be aligned centrally to the ECRS.

The measurements shall then be taken in the following order:

2.1. Sitting Height (B)

This measurement shall be taken to the highest part of the ECRS that is the effective headrest (head pad or backrest).

A tolerance is added to this measurement to allow part of the head to protrude from the ECRS:

- (a) +5 per cent for stature ranges below 87 cm;
- (b) +10 per cent for statures ranges above 87 cm.

2.2. Hip Breadth (D)

The hip breadth measurement shall be taken while maintaining the sitting height measurement (B).

The hip breadth measurement shall be taken while asserting a 50 N contact force on the ECRS.

If 50 N force cannot be achieved, because the ECRS restricts the space at the simulated thighs then the measurement should be taken at the point the simulated thighs contact the ECRS. There shall be no lateral deformation of the ECRS caused by the measuring device.

2.3. Maximum Shoulder Height (E2)

The maximum shoulder height measurement shall be taken while maintaining the sitting height (B) and hip breadth (D) measurements.

2.3.1. For integral ECRS

This measurement shall be taken when the top of the shoulder height cylinders of the device are aligned with the highest harness slot position still fitting within the required ISO volumetric envelope. For this alignment, the top of the shoulder cylinder shall be aligned perpendicular to the harness webbing outlet in the ECRS backrest.

A tolerance may be added to this measurement to allow the shoulders of the occupant to be higher than the harness shoulder slots. However, if there is a physical restriction due to the design of the ECRS (e.g. the headrest) that would prevent a child with taller shoulders fitting the tolerance should not be added.

If there is no possible interference then the following tolerances may be added:

- (a) If the ECRS instruction manual provided by the manufacturer quantifies the distance the child's shoulder may be above the harness slots, then this distance shall be added to the maximum shoulder height measurement;
- (b) If no distance is specified a 2 cm tolerance may be added to the maximum shoulder height measurement.

2.3.2. For non-integral ECRS

This measurement shall be taken when the top of the shoulder height cylinders of the device are aligned without interference with the lowest point of the headrest, this includes any belt routing guide.

No tolerance shall be added to this measurement.

2.3.3. For ECRS with an impact shield

This measurement shall be taken when the top of the shoulder height cylinders of the device are aligned without interference with the lowest point of the headrest, this includes any belt routing guide.

No tolerance shall be added to this measurement.

2.4. Maximum Upper Leg Thickness (G2)

This requirement only applies to ECRS with impact shields.

This measurement shall be taken while maintaining the sitting height (B), hip breadth (D) and maximum shoulder height (E2) measurements.

The maximum upper leg thickness measurement shall be measured when the device is adjusted so that the simulated thighs contact the bottom of the impact shield.

2.5. Maximum Abdomen Depth (F2)

This requirement only applies to ECRS with impact shields.

This measurement shall be taken while maintaining the maximum upper leg thickness (G2), maximum shoulder height (E2), hip breadth (D) and sitting height (B) measurement positions.

The bottom of the simulated abdomen of the device shall be aligned with the top of the simulated thighs.

The abdomen depth shall be measured when the simulated abdomen contacts the shield.

2.6. Shoulder Breadth (C)

The shoulder breadth measurement shall be taken while maintaining the sitting height (B) and hip breadth (D) measurements.

The width of the ECRS at the maximum shoulder height measurement position shall be measured while asserting a 50 N contact force on the ECRS.

If there is no side wing structure to the ECRS at the maximum shoulder height (E2), the shoulder breadth measurement shall be taken at a height, which is the closest proximity to the maximum shoulder height, with side wing structure.

If the width of the ECRS between the minimum and maximum shoulder height measurements is not a consistent width, i.e. significantly narrower at any point between the E1 and E2 measurements, then an intermediate shoulder breadth measurements shall be taken."

---
