Subject: URGENT LETTER - Coronavirus Bill Six-month Review

I am sending this letter representing a group of people who want to be represented in the House of Commons tomorrow to ensure that their human rights are maintained. Those who are copied into this email (including bcc) are mainly from Northern Ireland but also include people from Wales and Scotland.

To all Ministers in Northern Ireland and to the First Ministers of Scotland and Wales to kindly request that one or more of you make these valid issues heard tomorrow in the House of Commons, in the name of democracy:

1) That there are SEVEN human coronaviruses including the common cold. So why are we being tested for a non-specific coronavirus as cited in our media; "19" has been dropped from the name when referring to cases and deaths? There seems to be **no justification for these tests** that we the public are paying for. Further, they have proven to be inaccurate, misleading, inappropriate and a waste of our money and causing unnecessary worry.

2) That in light of the Panorama programme on Monday night, it is evident that there is black hole from where we are fed lies about the testing processes which further makes us question the **authenticity and integrity of any of the data**. Our ongoing concern in this regard is further fuelled by the contents of the letter between Robert Swann and SDLP Strabane (see attached) where health professionals were instructed to state Covid-19 as a cause of death when they were to "*apply their clinical judgement as to whether the disease caused, was assumed to have caused, or contributed to the death In such circumstances, doctors were advised to use the terms COVID-19 or probable/suspected COVID-19 when certifying the death*". The UK policy does NOT require total conformity with that determined by the WHO where our public interest is at stake. The UK should have the integrity and independence to carry out its duty of care in a rational and just manner.

Further, there are **serious anomalies** in the Government's instructions for example, to medical staff in hospitals and care homes to apply DNR notices on patients over 45, who were suspected of having Covid19 while the same notices were given to disabled people suspected of having the disease, regardless of age? In addition, the Government gave advice for elderly people in care homes with the disease, not to be admitted to hospitals whilst placing symptomatic patients back into care homes? ([Belfast Live FOI Request](#))

3) How do we trust the data that has nurtured the fear in our streets and homes when Ministers are constantly noted in public for **breaches of their own rules?**

4) The draconian measures outlined in the **Coronavirus Bill 2020** now seem to be **disproportionate to the real risk of the virus** when the real risk has not been proven in any country to justify the determination of a pandemic. More people have died as a result of these measures than from the virus. Each year people die from a flu or cold, some of these being from the coronavirus family, yet we have never experienced pandemic restrictions before and these blips have gone eg [January 2018 in NI](#) (see first excel sheet link).

5) Before any extension is passed of this Bill, it would seem rational and reasonable to ask the public what they want to do for their own future. Where it is obvious from watching Ministers struggle to justify their decisions on restrictions and on the constant contradictions in this regard, I believe it is time to pass the onus back to the people where you do not need to be solely accountable for the decisions that **we democratically** make, supported by you.

A referendum to decide on what is best for our future is what is required to ensure our tenable, sustainable and democratic future - To determine whether we believe restrictions or natural immunity is best for us, with each household being able to determine how best they can implement their own restrictions. Until then, these measures should not be imposed on us. We have already lived through enough of these restrictions to be able to make an informed decision on what is best for us.

6) I also ask that the Governments (inclusively) collaboratively work **to allow independent scientists and doctors to speak publicly and to be heard fairly by yourselves**, who have undergone considerable harassment since speaking out about their expert opinion about coronavirus. People are asking why they are not allowed to speak. Does the Government not have a duty of care to listen to their words and evidence to ensure that you make the right decision at this critical and unprecedented time and to assure us, the public, that you are acting in **our interest**?

7) NI is being earmarked for a **pre-mature vaccine-testing scheme** yet not one Minister is openly questioning the rationality and even the morality of this decision when everyone is aware that the timing of vaccine so soon gives no indication that it is safe from long-term harm (or even relatively short- to medium-term harm). We should not be forced to have vaccines to go about our normal lives and the Government should look at this issue with the gravity it deserves before making any informed decision on progressing this further.

8) You may or may not be aware that 5G is also being rolled out across NI and in other parts of the UK. Symptoms of **electromagnetic radiation**, which is emitted when radio signals and electricity meet, (to put it very simply), are similar to those of coronavirus ie heated skin and blood vessels which give rise to fever, headaches, aches and pains at the lower end of frequencies and can be used as a [weapon for mind control](#) at the higher end of frequencies.

Regardless of the gravity of the latter effects from high frequencies that do not correlate (at present) with those symptoms from coronaviruses, it is evident that we who live in the UK could potentially be used as guinea pigs in the testing of 5G frequencies over the next year as the "[WHO \(under the section "what is WHO doing?"\) is conducting a health risk assessment from exposure to radiofrequencies, covering the entire radiofrequency range, including 5G, to be published by 2022](#)", If this report is being published in 2022, we can only rationally surmise that we are the ones being tested as it is being rolled out **now**.

Notwithstanding the legal and moral issues surrounding the WHO's techniques in assessing the risks to humans, there are other implications. At the very least, our true coronavirus symptoms could skew the results of 5G monitoring, while at the gravest of implications, we could be experiencing symptoms of 5G frequencies and be treated with tests and vaccines, together with quarantine and other restrictions, **unnecessarily**.

This time is critical for the future of the UK, we ask that you stand by the Nolan Principles of Public Office and you represent us in a transparent and objective manner and that you have the integrity and moral grounding to carry out your role in representing us tomorrow in the House of Commons.

Thanking you in advance for your attention and actions on these matters.

Yours sincerely

Christine Gibson

Acting on behalf of various community groups across the UK
