Recommendation on trial through 2021 for

UNECE STANDARD DDP-xx

concerning the marketing and commercial quality control of

Apricot Kernels

2020 EDITION

UNITED NATIONSNew York and Geneva, 2020

NOTE

Working Party on Agricultural Quality Standards

The commercial quality standards developed by the United Nations Economic Commission for Europe (UNECE) Working Party on Agricultural Quality Standards help facilitate international trade, encourage high-quality production, improve profitability and protect consumer interests. UNECE standards are used by Governments, producers, traders, importers and exporters, and other international organizations. They cover a wide range of agricultural products, including fresh fruit and vegetables, dry and dried produce, seed potatoes, meat, cut flowers, eggs and egg products.

Any member of the United Nations can participate, on an equal footing, in the activities of the Working Party. For more information on agricultural standards, please visit our website http://www.unece.org/trade/agr/welcome.html.

The new Recommendation for Apricot Kernels is based on document ECE/CTCS/WP.7/2020/15, reviewed and adopted by the Working Party in 2020 (inter-sessional approval procedure) for a 1-year trial period until November 2021.

The designations employed and the presentation of the material in this publication do not imply the expression of any opinion whatsoever on the part of the United Nations Secretariat concerning the legal status of any country, territory, city or area or of its authorities, or concerning the delimitation of its frontiers or boundaries. Mention of company names or commercial products does not imply endorsement by the United Nations.

All material may be freely quoted or reprinted, but acknowledgement is requested.

Recommendation on trial through 2021 for

UNECE Standard DDP-xx concerning the marketing and commercial quality control of **Apricot Kernels**

I. Definition of produce

This standard applies to apricot kernels of varieties (cultivars) grown from *Prunus armeniaca*, L., intended for direct consumption or for food when intended to be mixed with other products for direct consumption without further processing. The standard does not apply to bitter apricot kernels, apricot kernel halves, pieces, dices or to apricot kernels that are processed by salting, sugaring, flavouring, or roasting, that are blanched or for industrial processing.

II. Provisions concerning quality

The purpose of the standard is to define the quality requirements of a pricot kernels at the export- control stage, after preparation and packaging.

However, if applied at stages following export, the holder/seller shall be responsible for observing the requirements of the standard. The holder/seller of products not in conformity with this standard may not display such products or offer them for sale, or deliver or market them in any other manner.

A. Minimum requirements ¹

In all classes, subject to the special provisions for each class and the tolerances allowed, the apricot kernels must display the following characteristics:

The kernel must be:

- intact; however, kernels with less than 1/8 missing are considered as whole.
- sound; produce affected by rotting or deterioration such as to make it unfit for human consumption is excluded;
- clean; practically free of any visible foreign matter;
- sufficiently developed. Shrunken or shrivelled kernels which are extremely wrinkled, or with desiccated, dried out or tough portions affecting more than 25 per cent of the kernel are to be excluded;
- free from blemishes, areas of discoloration or spread stains in pronounced contrast with the rest of the kernel affecting in aggregate more than 25 per cent of the surface of the kernel;
- · well-formed excluding [doubles and] twins;
- free from living pests, whatever their stage of development;

Definitions of terms and defects are listed in annex III of the Standard Layout – Recommended terms and definition of defects for standards of dry (Inshell Nuts and Nut Kernels) and dried produce http://www.unece.org/trade/agr/standard/dry/StandardLayout/StandardLayoutDDP_e.pdf

- free from damage caused by pests, including the presence of dead insects and/or mites, their debris or excreta;
- free from mould filaments visible to the naked eye;
- free from rancidity;
- free of abnormal external moisture;
- free of foreign smell and/or taste.

The condition of the apricot kernels must be such as to enable them:

- to withstand transportation and handling
- to arrive in satisfactory condition at the place of destination.

B. Moisture content ²

Apricot kernels shall have moisture content not exceeding 6.5 per cent.

C. Classification

In accordance with the defects allowed in section "IV. Provisions concerning tolerances", apricot kernels are classified into the following classes:

"Extra" Class, Class I and Class II.

The defects allowed must not affect the general appearance of the produce as regards quality, keeping quality and presentation in the package.

III. Provisions concerning sizing

The sizing of apricot kernels is optional

When sized, sizing is determined by the maximum diameter of the equatorial section of the apricot kernel, by means of round-holed or elongated-holed screens. Other sizing and screening systems may be used, such as those based in the number of apricot kernels per 100 g or per ounce (28,3495 grams).

- Sizing is expressed by an interval defined by a minimum and maximum size in millimetres, which must not exceed 2 mm of difference. When a range in count is specified, the apricot kernels shall be fairly uniform in size, and the average count shall be within the range specified.
- Screening is expressed by a reference to a minimum size, in millimetres, followed by the words "and plus" or other equivalent wording, or by a reference to a maximum number of kernels per 100 g or per ounce, followed by the words "and less" or other equivalent wording.

Alternatively, screening could be expressed by a reference to a maximum size, in millimetres, followed by the words "and less" or other equivalent wording, or by a reference to a minimum number of kernels per 100 g or per ounce, followed by the words

The moisture content is determined by one of the methods given in annex II of the Standard Layout – Determination of the moisture content for dry produce http://www.unece.org/trade/agr/standard/dry/StandardLayout/StandardLayoutDDP e.pdf>. The laboratory reference method shall be used in cases of dispute.

"and plus" or other equivalent wording. For produce presented to the final consumer under on «screened», this alternative reference is not allowed.

IV. Provisions concerning tolerances

At all marketing stages, tolerances in respect of quality and size shall be allowed in each lot for produce not satisfying the minimum requirements of the class indicated.

A. Quality tolerances

	Tolerances allowed percentage of defective produce, by number or weight		
Defects allowed	Extra	Class I	Class II
(a) Tolerances for produce not satisfying the minimum requirements of which no more than:	5	10	15
Rancid rotten, mouldy or damaged by pests or deterioration: Of which mouldy	1 0.5	2 0.5	3
Not sufficiently developed, shrunken and shrivelled	i	2	4
Gummy, brown spot, blemishes and discoloration	2	3	6
Pieces	1	1	3
Split and broken halves	1	3	5
Foreign matter, loose shells, shell fragments, fragments of hull, dust (by weight) Living pests	0.15	0.25	0.25
(b) Size tolerances (if sized)	U	U	U
For produce not conforming to the size indicated, in total (c) Tolerances for other defects	10	10	15
Chipped and scratched with an area of larger than 6.4 mm or 0.25 inch	5	10	20
[Doubles or] Twins	5	15	20
Bitter apricot kernels ^b	1	1	1

V. Provisions concerning presentation

A. Uniformity

The contents of each package must be uniform and contain only apricot kernels of the same origin, quality, variety (if indicated) and/or crop year (if indicated), and size (if sized).

The visible part of the contents of the package must be representative of its entire contents.

B. Packaging

Apricot kernels must be packed in such a way as to protect the produce properly.

The materials used inside the package must be clean and of a quality such as to avoid causing any external or internal damage to the produce. The use of materials, particularly of paper or stamps bearing trade specifications, is allowed, provided the printing or labelling has been done with non-toxic ink or glue.

Packages must be practically free of all foreign matter in accordance with the table of tolerances in section "IV Provisions concerning tolerances".

VI. Provisions concerning marking

Each package³ must bear the following particulars in letters grouped on the same side, legibly and indelibly marked and visible from the outside:

A. Identification

Packer and/or dispatcher:

Name and physical address (e.g. street/city/region/postal code and, if different from the country of origin, the country) or a code mark officially recognized by the national authority.⁴

B. Nature of produce

- · "Apricot kernels"
- Name of variety (optional)

C. Origin of produce

• Country of origin⁵ and, optionally, district where grown or national, regional or local place name.

D. Commercial specifications

- class
- size (if sized); expressed in accordance with section III
- crop year (optional)
- "Best before" followed by the date (optional).

³ These marking provisions do not apply to sales packages presented in packages.

⁴ The national legislation of a number of countries requires the explicit declaration of the name and address. However, in cases where a code mark is used, the reference "packer and/or dispatcher" (or equivalent abbreviations) must be indicated in close connection with the code mark, and the code mark should be preceded with the ISO 3166 alpha country code of the recognizing country, if not the country of origin.

⁵ The full or a commonly used name should be indicated.

E. Official control mark (optional)
