... AND HALT BIODIVERSITY LOSS

STEFAN SCHINDLER (ENVIRONMENT AGENCY AUSTRIA)

SEIS and the environmental dimension of the SDGs – Webinar No. 5 “INFORMING BIODIVERSITY RESTORATION POLICIES”

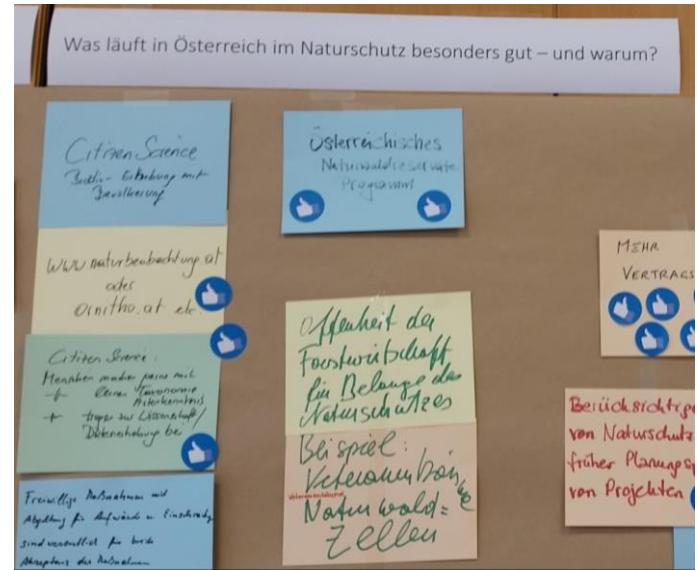

Content

- Austrian National Biodiversity Strategy and Action Plan 2030
- Biodiversity Monitoring in Austria

Austrian National Biodiversity Strategy and Action Plan 2030

Process 2019-2021

- Biodiversity dialog (workshop series with stakeholders)
- Expert paper on possible elements for a National Biodiversity Strategy and Action Plan
- Open public consultation
- First draft of the National Biodiversity Strategy and Action Plan
- Vision and cost estimation
- **Forthcoming:**
 - Definitive negotiations between Federal Ministry for Climate Protection and stakeholders (other ministries, Federal States, agricultural chambers, NGOs, academia...)

© V. Wittmann

Austrian National Biodiversity Strategy and Action Plan 2030

- In agreement with the EU-Biodiversity Strategy 2030
- 10-point program for the Austrian Biodiversity
 - 1) Status and trends of species and habitats have improved significantly
 - 2) All important ecosystems are effectively protected and adequately connected
 - 3) Ecosystems that are particularly important for biodiversity and climate protection have been restored
 - 4) Habitat loss and fragmentation are significantly reduced
 - 5) Transformative change has been initiated in society, biodiversity is integrated into all sectors
 - 6) Global engagement is strengthened
 - 7) The legal framework for the conservation of biodiversity has been improved
 - 8) Financing is guaranteed and biodiversity-promoting action is supported
 - 9) Biodiversity is valued in society and the economy
 - 10) Scientific knowledge for achieving and evaluating biodiversity targets is available

Biodiversity Monitoring in Austria

Biodiversity status and trends requested by policy makers (e.g. CBD reporting)
→ systematic biodiversity monitoring on species and habitats covering the entire country:

- **WFD-Monitoring:** species and habitat data gathered for assessment of ecological status, but not analyzed regarding BD status and trends
- **Austrian Forest Inventory (ÖWI):** BD data play a minor role
- **Birds:** several monitorings by BirdLife Austria
- **HD-Monitoring (Art 11):** several species and habitats of community interest monitored
- **ÖBM-Kulturlandschaft:** base survey 2017/18 in open cultural landscapes

Habitats Directive Article 17 Reporting (2019)

Target features

- 205 species: full report in one or both biogeographic regions (Alpine/Continental)
- 2 species: partial report (*Canis aureus*, *Bolbelasmus unicornis*)
- 71 habitat types: full report in one or both biogeographic regions

Parameters

Parameters	Parameters for habitats	Parameters for species
Range	Range	Range

Habitats Directive Article 11 Monitoring (2019)

Target features are monitored in different areas and with different methods

- Full survey:
 - All occurrences in a **quadrant** (3' x 5') are mapped
 - Population data for all occurrences in a **quadrant** are taken
 - Monitoring: random selection of a **sample area** (1000x1000m or 500x500m) and survey of 1-4 **test areas** per sample area
- Survey of a representative sample
 - Random selection of **quadrants**
 - Mapping of occurrences on **quadrants**
 - random selection of a **sample area**
 - Survey of parameters on **test area**
- Baseline survey
 - Searching for additional occurrences in potentially suitable **quadrants**

Austrian Biodiversity Monitoring ÖBM-Kulturlandschaft

Aim:

Monitoring of status of biodiversity in Austrian cultural landscapes
→ Evaluation of biodiversity targets (e.g. CBD reporting)

Approach:

- Focus on the national scale; representative for the open cultural landscape of Austria (excl. forests; incl. Alpine pastures)
- “population” : ***all 1 km² grids with ≥ 50% cultural landscape***
- Field surveys of species and biotope types; and assessment of EBVs by remote sensing
- Repetitions every 3-5 years
- Compatibility with existing programs of partial coverage
