

## **SNA and BPM update programme**

### **Uruguay, Lourdes Erro:**

I find it a big challenge to coordinate SNA and BOP new proposals when both agendas and deadlines are different. This is not only at the level of TFs but also at the level of compilers teams in countries, if they are going to be involved as they should: Could you elaborate a little bit more on this?

### **USA, Marshall Reinsdorf:**

One issue that may be worth addressing is treatment of software copies as fixed assets rather than as intermediate inputs. It's clear that software originals are fixed assets but practices on copies vary.

### **UK-ONS, Richard Heys:**

I think it's not a question of extra scope items, but in thinking about crypto-assets, also need to think about consistency with other assets.
