# DISASTER RISK REDUCTION: THE ROLE OF OFFICIAL STATISTICS

# ***WHAT IS CEPREDENAC?***

- Regional intergovernmental organization.
- Belonging to SICA as a Specialized Secretariat in comprehensive disaster risk management.

Systematizes and records information related to disaster prevention, mitigation, response, impact and recovery, in a dynamic, interactive and accessible way, at the regional level.

# *MISSION*

&

# **VISION**

To contribute to the reduction of vulnerability and the impact of disasters, as an integral part of the transformation and development process of the Central American SICA Integration.

## *VISION*

To be the Regional Organization that can support the governing bodies in comprehensive risk management before disasters.

# 02

## IMPORTANCE OF STATISTICAL DATA

One of the main actions of CEPREDENAC in this area has been the development of:

### **THE REGIONAL INFORMATION AND COORDINATION PLATFORM**

To facilitate understanding through statistical information and forecasts, to interact with the territories in the region.

Statistical data allow observation of risk situations such as exposed population, prognoses, risk variables, etc.

As well as knowing how the population is developing, knowing the recurring natural threats and, above all, the opportunities that the location of the isthmus offers.

Data analysis has identified better ways to address risks.

With which we are helping to make informed decisions in the countries of the SICA region.
