

Genetically Modified Organisms

Achievements and systemic challenges

Antje Lorch (Ecoropa)

Aarhus Convention – WGP 25 – agenda item 13

- GMOs are not in one place
- Expertise about GMOs
- New genetic engineering techniques

GMOs are not at one place at one moment,
but research, field trials, productions and products
- and possibly accidental releases -
can be in different countries and continents.

Expertise for GMO
risk assessment and risk management
is not distributed evenly.

New GMOs are intended
to have environmental effects.

Some are intended to spread across borders.
