Item 4 (d) of the provisional agenda

**eTIR conceptual, functional and technical documentation version 4.3:
eTIR technical specifications****Technical details of message pair I5/I6****Note by the secretariat****I. Mandate**

1. The Inland Transport Committee (ITC), at its eighty-second session (23–28 February 2020) approved (ECE/TRANS/294, para. 84¹) the establishment of the Group of Experts on Conceptual and Technical Aspects of Computerization of the TIR Procedure (WP.30/GE.1) and endorsed its Terms of Reference (ToR)² (ECE/TRANS/WP30/2019/9 and ECE/TRANS/WP.30/2019/9/Corr.1), pending approval by the United Nations Economic Commission for Europe (ECE) Executive Committee (EXCOM). EXCOM during its remote informal meeting (20 May 2020) approved the establishment of WP.30/GE.1 until 2022, based on the ToR included in document ECE/TRANS/WP.30/2019/9 and Corr.1, as contained in document ECE/TRANS/294 (ECE/EX/2020/L.2, para. 5(b)).³

2. The ToR of the Group stipulate that the Group should focus its work on preparing a new version of the eTIR specifications, pending the formal establishment of the Technical Implementation Body (TIB). More specifically, the Group should (a) prepare a new version of the technical specifications of the eTIR procedure, and amendments thereto, ensuring their alignment with the functional specifications of the eTIR procedure; (b) prepare a new version of the functional specifications of the eTIR procedure, and amendments thereto, ensuring

their alignment with the conceptual specifications of the eTIR procedure; (c) prepare amendments to the conceptual specifications of the eTIR procedure, upon requests by WP.30.

3. This document presents the technical details of the eTIR messages I5 and I6. These aspects will be part of the eTIR technical specifications document.

II. Communication between eTIR stakeholders and the eTIR international system

A. List of eTIR messages

1. I5/I6 message pair

4. This section describes the technical specifications of the “I5 – Query guarantee” request message, sent by the national customs system to query information on a guarantee from the eTIR international system; and the “I6 – Query results” response message, sent back by the eTIR international system. This pair of messages form the query mechanism available for the customs authorities to retrieve information recorded in the eTIR international system about guarantees, their related TIR transports and TIR operations.

5. The national customs system can choose to retrieve more or less information in the “I6 – Query results” message depending on the parameters of the “I5 – Query guarantee” message. Customs authorities can only retrieve information about guarantees that are used in TIR transports starting, ending or passing through their customs territories. As the guarantee can have different statuses, it is important to understand them as they are detailed in the guarantee state chart diagram in the eTIR concepts. The level of details of the “I6 – Query results” response message depends on the value of the "Reply type, coded" field.

(c) How to use response data in the national customs system

6. The eTIR international system will return whether there were errors while processing the request message by filling in the Error list. Therefore, and as for all response messages expected from the eTIR international system, the first step when parsing the “I6 – Query results” response message should always be to look for potential error elements in the response message and address them accordingly as mentioned in the Error management section above.

7. If there was no error, and the response message content is as expected, the next step for the national customs system is to find the information needed in the response. Depending on the case in which the query mechanism was used, the national customs system may need to store in its database all information contained in the “I6 – Query results”, or on the contrary, the national customs system may need to retrieve only a few fields from the response and process them.
