# Report on the revised biodiversity indicators

**Agenda item 6:** Review of the Guidelines for the Application of Environmental Indicators

**Tobias Garstecki** 

### Overview

- Development of the global policy framework on biodiversity
  - Need to adapt to developing framework
- Examples for changes in biodiversity indicators
  - Addition of indicators
  - Modification of indicators
  - Deletion of indicators
- Revision of biodiversity monitoring guidelines

## Development of the global policy framework on biodiversity

- Post-2020 Global Biodiversity Framework under CBD
  - Ambitious area-based targets
  - Focus on threat reduction, outcomes, effectiveness, representation, connectivity
  - Specific trends, e. g. further emergence of OECMs
- SDGs
- Other MEAs and processes

### Need to develop and adapt biodiversity indicators

Adaptation to evolving global policy framework

Innovation in monitoring methodology

Experience from use of indicators and reporting

Simplification and elimination of redundancies

UNECE – Joint Task Force on Environmental Statistics and Indicators, 18th session – 18-19 October 2021, Geneva

Overview of proposed additions, modifications and deletions (four to be kept unmodified)

#### **Additions**

- Eight indicators
- Policy relevance
- Development of monitoring protocols

#### **Modifications**

- Six indicators
- Policy relevance
- Development of monitoring protocols
- Clarity and clear delineations between indicators

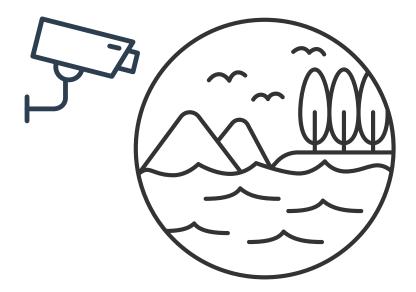

#### Discards

- Nine indicators
- Policy relevance
- Feasibility and practicability
- Reduction of redundancies among indicators

UNECE – Joint Task Force on Environmental Statistics and Indicators, 18th session – 18-19 October 2021, Geneva

Example of a proposed addition: D-2.2 Conservation status of habitats of high importance for biodiversity conservation

- Increasing policy focus on effectiveness and conservation outcomes
- Existence of a suitable and adaptable EEA Indicator
  - Conservation status of habitats under the EU Habitats Directive
- Momentum in CoE countries because of monitoring/reporting initiatives of Bern Convention Secretariat
  - cf. Resolution 8 (2012)

## Example of proposed modification: D-1.1 Share of total PAs (IUCN categories) in the country area

#### Remains of high policy relevance overall

- Inclusion of separate sub-category on OECMs in response to policy evolution
- Need to provide clearer distinction between land and sea
  - Definition which sea areas to consider
- Partial overlap with D-1.2 (Share of total protected areas - national categories - in the country area) remains

Photo: © Tobias Garstecki

Example of proposed discard: D-2.1 Share of biosphere reserves and wetlands of international importance in the country area

- Lumps two different designations
- Most biosphere reserves and Ramsar sites are also PAs (at least partly)
- Disagreement on which parts of biosphere reserves are dedicated primarily to conservation
- Potential for Ramsar sites differs between countries
- Site protection better captured by PA indicator D-1.1

## Revision of biodiversity monitoring guidelines

- Partial revision to...
- .. Reflect development of UNECE indicators
- .. Account for development in policy framework since 2013/14
- .. Follow development of monitoring technology
- Include useful new case studies
- . . shorten and focus
- First draft due end of October 2021
