Electric Vehicles and the Environment (EVE IWG)

REPORT TO GRPE 84TH SESSION
3. Electric Vehicles and the Environment (EVE)

(a) UN GTR No. [XX] on in-vehicle battery durability
GRPE may wish to consider a proposal by the IWG on EVE for a new UN GTR on in-vehicle battery durability.
Documentation: (ECE/TRANS/WP.29/GRPE/2021/18) GRPE-84-01, GRPE-84-02

(b) Other activities of IWG on EVE
GRPE may wish to consider updated terms of reference and rules of procedure for the IWG on EVE.
Documentation: (GRPE-83-30), GRPE-84-10
Electrified Vehicle Durability Importance

- New Battery Regulation proposal in EU recognizes the importance of performance criteria for batteries and mentions work of EVE IWG

  - “Battery degradation is important to cost and consumer acceptance, but real-life degradation is not well understood.”

- California Air Resources Board (CARB) recently presented “Assurance Measures”, which included electrified vehicle durability requirements, during a public workshop on their Advanced Clean Car (ACC) II program.
  - [https://ww2.arb.ca.gov/events/public-workshop-advanced-clean-cars-ii](https://ww2.arb.ca.gov/events/public-workshop-advanced-clean-cars-ii)
What does this GTR accomplish?

- Requires two state-of-health (SOH) monitors for energy and range
- Establishes minimum performance requirements for electrified vehicle battery degradation based on energy retention
- Establishes procedures for establishing vehicle families, verification of the SOH monitors, and the durability performance requirements.
- Implements data gathering to inform future versions of the GTR
- Helps to ensure the full environmental benefit of electrified vehicles
- Provides consumers with additional confidence with the long-term utility of electrified vehicles
Informal document GRPE-84-01 to amend GRPE-2021-18

Proposed updates to GRPE/2021/18 are shown in this version, via tracked changes

Proposal for the Technical Report

GRPE-84-01_track

GRPE-84-02
Major Changes to GRPE/2021/18

- Added statement of technical rationale and justification
- Updated and clarified definitions
- Included V2x provision for virtual mileage
- Clarified the verification process including analytical method
- Updated vehicle survey
- Clarified data gathering
- Addition of Annex 3 describing Determination of Performance Parameter during Part A Test Procedure
- Overall, improved the text for clearer interpretation
Overview of Durability GTR

Annexes

1. Vehicle survey
2. Values to be read from vehicles
3. Determination of Performance Parameter during Part A Test Procedure
State-of-Certified Range and State-of Certified Energy (SOCR and SOCE) monitors

- State-of-Certified Range and State-of Certified Energy (SOCR and SOCE) monitors
- The manufacturer shall install SOCR and SOCE monitors that operate during the life of the vehicle. The SOCR monitor shall maintain an estimate of the state of certified range (on-board SOCR), and the SOCE monitor shall maintain an estimate of the state of certified energy (on-board SOCE).
- The manufacturer shall determine the algorithms by which on-board SOCR and on-board SOCE are determined for the vehicles they produce. The manufacturer shall update the on-board SOCR and SOCE with sufficient frequency as to maintain the necessary degree of accuracy during all normal vehicle operation.
- The on-board SOCR and SOCE shall have a resolution of 1 part in 100 and be reported as the nearest whole number from 0 to 100.
- The manufacturer shall make available the most recently determined values of the on-board SOCR and on-board SOCE via the OBD port and optionally over-the-air (OTA).
- For the purposes of consumer information, the manufacturer shall make easily available to the owner of the vehicle the most recently determined value of the SOCE monitor via at least one appropriate method. The resolution for the customer values shall be determined in agreement with the authorities. For example:
  (a) dashboard indicator;
  (b) infotainment system;
  (c) remote access (such as via mobile-phone applications)
### Battery Performance Requirements

Definitions of Families

Vehicles having the same characteristics with respect to their evaluation under Part A or Part B below shall be grouped into vehicle families for the purpose of compliance verification. Families under Part A shall have the same characteristics with respect to verification of the SOCR/SOCE monitors. Families under Part B shall have the same characteristics with respect to verification of battery durability.

Families with the same characteristics with respect to compliance verification shall be defined as follows:

6.1.1. For Part A: Verification of Monitors

Only vehicles that are substantially similar with respect to the following elements may be part of the same monitor family:

(a) Algorithm for estimating on-board SOCR and on-board SOCE
(b) Sensor configuration (for sensors used in determination of SOCR and SOCE estimates)
(c) Characteristics of battery cell which have a non-negligible influence on accuracy of monitor
(d) Type of vehicle (PEVs or OVC-HEVs)

At the request of the manufacturer, with the approval of the responsible authority and with appropriate technical justification, the manufacturer may deviate from the above criteria for families.
6.1.2. For Part B: Verification of Battery Durability

Only vehicles that are substantially similar with respect to the following elements may be part of the same battery durability family:

(a) Type and number of electric machines, including net power, construction type (asynchronous/synchronous, etc.), and any other characteristics having a non-negligible influence on battery durability;

(b) Type of battery (dimensions, type of cell, including format and chemistry, capacity (Ampere-hour), nominal voltage, nominal power;

(c) Battery management system (BMS) (with regards to battery durability monitoring and estimations);

(d) Passive and active thermal management of the battery;

(e) Type of electric energy converter between the electric machine and battery, between the recharge-plug-in and battery, and any other characteristics having a non-negligible influence on battery durability;

(f) Operation strategy of all components influencing the battery durability;

(g) Declared maximum charging power.

At the request of the manufacturer, with the approval of the responsible authority and with appropriate technical justification, the manufacturer may deviate from the above criteria for families.
In-use Verification: Information gathering

- **Information gathering**
  - The following information shall be made available to the authorities by the manufacturer in a format to be agreed between the authorities and the manufacturer: annual report on relevant warranty claims; and annual statistics on repairs for both batteries and other systems that might influence the electric energy consumption of the vehicle. Such information shall be made available once a year for each battery durability family for the duration of the period defined in paragraph 5.2. after the last vehicle of this family is sold.
Part A: Verification of SOCR/SOCE monitors

- 6.3 Part A: Verification of SOCR/SOCE monitors
  - 6.3.1 Frequency of verifications
  - 6.3.2 Verification procedure
  - 6.3.3 Statistical Method for Pass/Fail decision for the SOCR monitor and SOCE monitor
  - 6.3.4 Corrective measures for the SOCR and SOCE monitors
Part B: Verification of Battery Durability

6.4 Part B: Verification of Battery Durability

- 6.4.1 Frequency of verifications
- 6.4.2 Pass/Fail Criteria for the battery durability family
- 6.4.3 Corrective Measures for the Battery Durability Family
Flow Charts

Figure 1: Flow chart for Part A: Verification of Monitors

- Vehicle Procurement
- Vehicle Survey according to Annex 1
- Check the Exclusion Criteria
  - None
  - Exclude from sampling
    - Or update the monitor by procedure in vehicle survey
- Obtain on-board SOCE/SCCR (used for Part A verification)
  - Perform Verification Test
  - Obtain measured SOCE/SCCR
  - Obtain onboard SOCE/SCCR (not used for Part A verification)
- Need more testing according to paragraph 6.3.3
- Pass/Fail Decision according to paragraph 6.3.3

Figure 2: Flow chart for Part B: Verification of Battery Durability

- Data Acquisition according to paragraph 5.1.
- Annual Sample Size is more than 500
  - NO
  - Exclude maximum 5% with responsible authority agreement
  - Pass/Fail Decision according to paragraph 6.4.2.
  - YES
- Annual Sample Size is less than or equal to 500
  - NO
## ANNEX 1: Vehicle Survey

### Vehicle Survey

The vehicle survey shall be used for all vehicles selected for testing in Part A of the verification. Vehicles that fall under one of the exclusion criteria below shall be eliminated from testing, or otherwise updated according to the procedures described below.

<table>
<thead>

</tbody>
</table>
Values to be read from vehicles:

1. On board SOCE value
2. On board SOCR value
3. Odometer (in km)
4. Date of manufacture of the vehicle
5. Total distance (sum of the distance driven and the virtual distance) [km], if applicable
6. Percentage of virtual distance [in per cent], if applicable
7. Worst case certified energy consumption of PART B family [Wh/km], if applicable
8. Total discharge energy in V2X [Wh], if applicable
9. Last charged by more than 50 per cent SOC swing on [Date]
10. Maximum, minimum, average ambient temperature* the vehicle was exposed to during its lifetime

Note: * ambient temperature to be read as daily averages
ANNEX 3: Determination of Performance Parameter during Part A Test Procedure

Determination of Performance Parameter during Part A Test Procedure

1. General

For the calculation of SOCE\textsubscript{measured} and SOCR\textsubscript{measured} according to paragraph 6.3.2. of this GTR, the measured and certified values of usable battery energy (UBE) and electric range (PER for PEVs and EAER for OVC-HEVs) are required:

- UBE\textsubscript{measured} and UBE\textsubscript{certified}
- Rangemeasured and Rangecertified

This annex describes the determination of these parameters in case of WLTP, in paragraph 2. for PEVs and in paragraph 3. for OVC-HEVs and gives guidance on which measurements need to be performed and which certified values need to be applied for a vehicle selected in the Part A verification procedure. Regions that do not apply UN GTR No. 15 (GTR15) or UN Regulation No. 154, shall define an alternative solution informed by the guidance below.

For the purposes of this annex, for PEVs the term 'battery' includes not only REESS used mainly for traction purposes, but also all other REESSs.
During the development of this GTR, the EVE identified the need for a future revision which could include:

- Consider heavy-duty vehicles
  - EVE has already identified technical differences which preclude the direct application of light-duty vehicle requirements
- Minimum performance requirements for range
- Data analysis and modification to the performance requirements
- Refinement of the verification procedures
- Adopt Normal Usage Indices
Updated Terms of Reference

Revised ToR’s for January 2021~ June 2023

Submitted by USA, Japan, Korea, EU and Canada

Co-chair: USA and EC

Vice chair: Japan

Secretary: Canada

Continue development of durability GTR’s
  - Light-duty vehicles durability – continued work
  - Heavy-duty vehicle durability – new work
  - Power determination – continued work

Collaboration with Group of Experts on Energy Efficiency (GEEE)

Information sharing
EVE Meetings

- After an incredibly busy year of virtual meetings the EVE will reconvene during the GRPE and begin to form our recommended meetings for 2022 calendar year and beyond.

- Initial thoughts are that as soon as travel is possible that we will meet in Brussels, hopefully in the Spring of 2022.
