# Disaggregation for Redressing Inequalities

**Fanni Kovesdi & Sophie Scharlin-Pettee (OPHI)**

December 1<sup>st</sup> 2021

UNECE Conference of European Statisticians

# The 2030 Agenda for Sustainable Development and going beyond averages:

How can **multidimensional poverty measures** contribute to reduce inequalities between groups and also go beyond the household level?

# Agenda 2030

Pledge to **'Leave No One Behind'** requires detailed and careful monitoring

**Global MPI tracks changes in multidimensional poverty over time and can be disaggregated by**

- Age group
- Subnational regions
- Urban-rural area
- Gender of the household head
- Ethnicity, race, and caste (in selected countries)

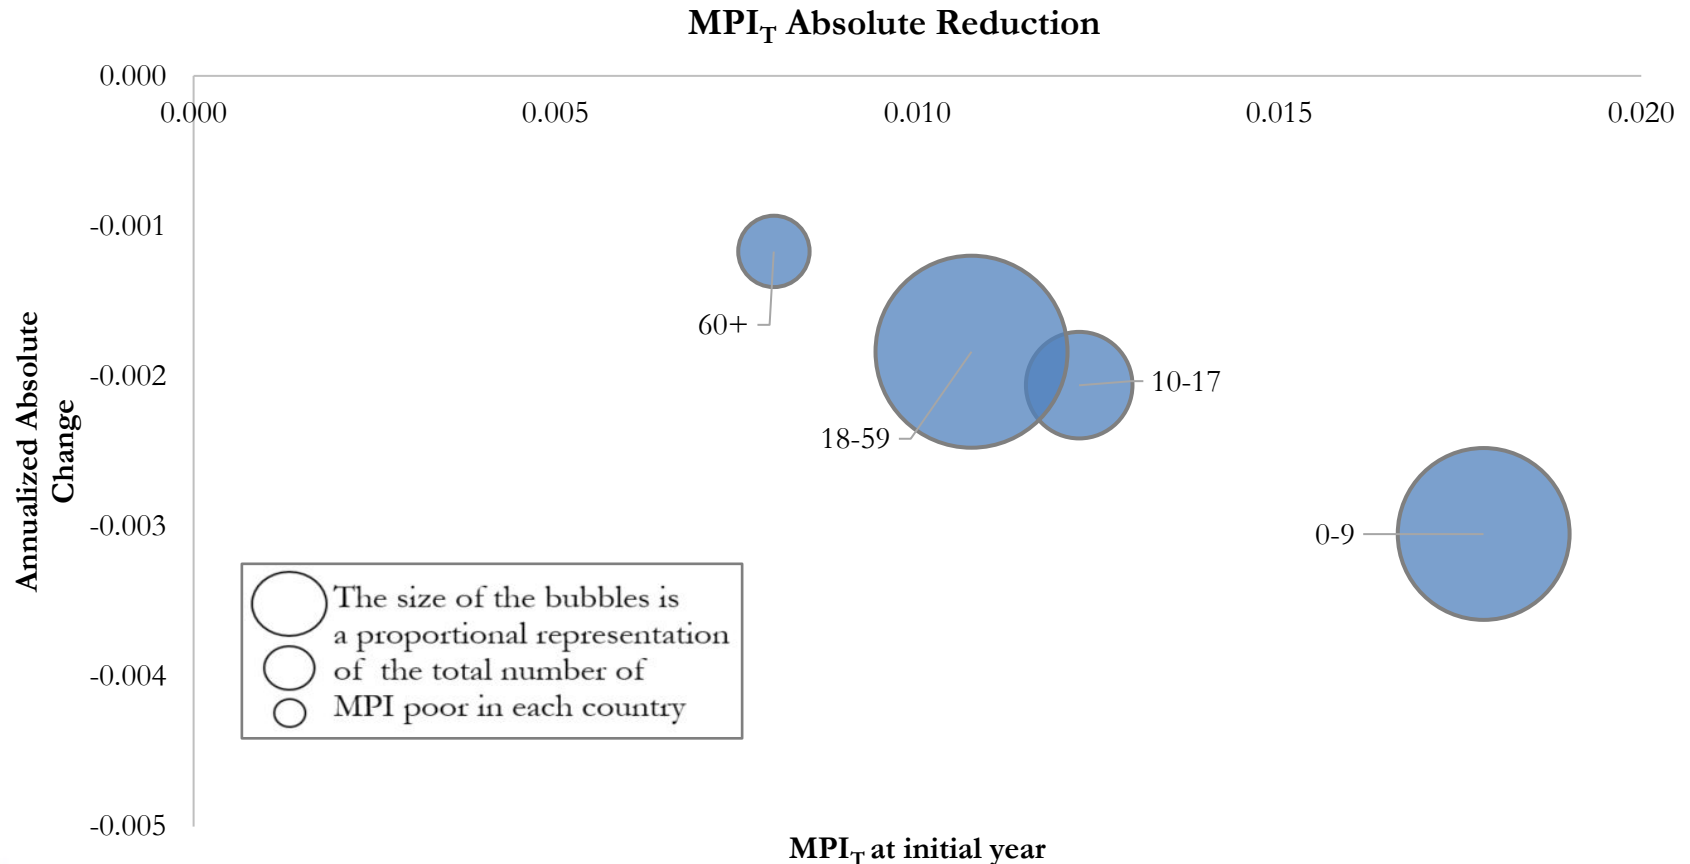

→ In addition, **gendered and intrahousehold analysis** for key indicators to reveal policy-relevant disparities

# Global MPI Trends for Europe and Central Asia: Percentage Change in MPI

# Kyrgyzstan (MICS 2014 - 2018)

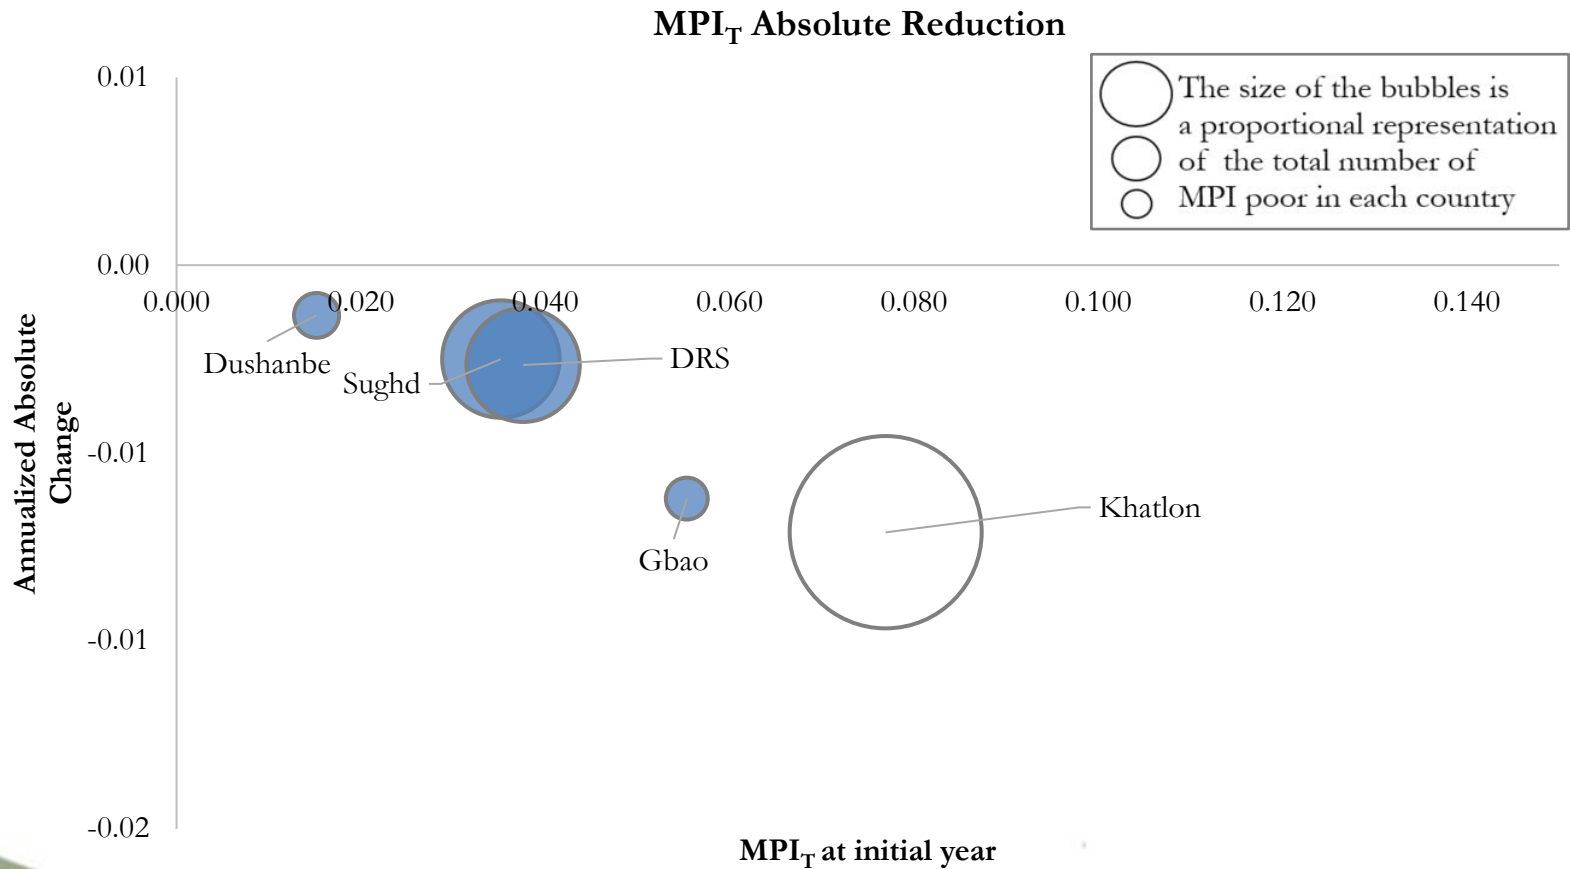

## Absolute Reduction in global MPI by Age Group

Note: Unshaded bubbles indicate a statistically insignificant change.

# Tajikistan (DHS 2012 - 2017)

## Absolute Reduction in global MPI by Subnational Region

Note: Unshaded bubbles indicate a statistically insignificant change.

# Turkmenistan (MICS 2006 - 2015/16 - 2019)

## Censored Headcount Ratios across Time

# Global MPI – Intrahousehold analysis

Providing **inclusive and equitable quality education** (SDG 4) is a key goal of the 2030 Agenda for Sustainable Development

Education is often associated with gains across the household:

- higher school attendance for children
- lower nutritional deprivations
- lower child mortality

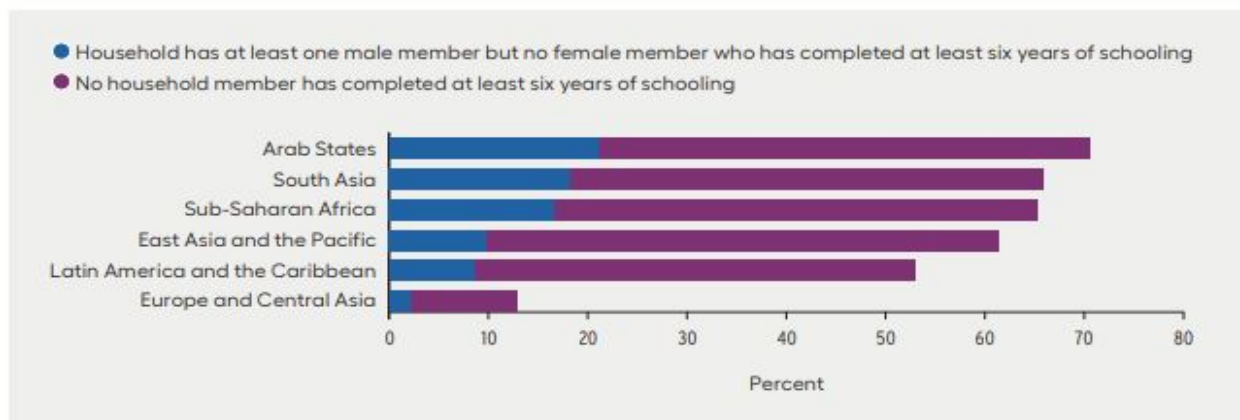

But globally, **women's education lags behind men's**

→ Underlying MPI microdata offers an **in-depth, gendered, and intrahousehold** analyses of such deprivation patterns

# Multidimensional Poverty through a Gendered and Intrahousehold Lens

- Of the 1.3 billion multidimensionally poor, two-thirds - 836 million - live in households in which no girl or woman has completed at least six years of schooling.
- The percentage of multidimensionally poor people living in households in which no girl or woman has completed at least six years of schooling ranges covers 12.8% of the poor population in Europe and Central Asia.

Source: Alkire, Kanagaratnam and Suppa forthcoming.

# Multidimensional Poverty through a Gendered and Intrahousehold Lens

Percentage of individuals living in MPI poor households where:
