

# Use of register data on wealth in Danish SDG poverty indicator

For UNECE  
November 2021

# Danish indicator on relative poverty

- Developed by Statistics Denmark in 2018
- Developed for monitoring SDG-target 1.2.1 in the absence of a national definition of poverty
- Multidimensional poverty indicator
- Entirely register based
- Full population coverage
- Inspired by the works of national expert-group on poverty (2013)

# Motivation (1)

- 50 percent of median income has often been used nationally and internationally as an indicator for relative poverty.
- The threshold aligns well with minimum consumption budgets in Denmark

Figur 6.2 Enlige uden børn opdelt på indkomst i 2010

Source figures:  
Ekspertudvalg om fattigdom  
– [En dansk fattigdomsgrænse](#)

# Motivation (2)

**...good indicator for economic social exclusion.**

However the low income group includes at least two large groups that are rarely considered poor in Denmark.

- Students that are (mostly) voluntarily enduring a set period of low income
- people with (liquid) wealth.

**Can we improve upon this?**

# Definitions

## Low-income

People with equivalised disposable income below 50 per cent of median income.

## Student households

Households, where the primary breadwinner is a student, etc.

## Low wealth

Equivalised Net wealth - excluding pensions below the low income threshold, at the beginning of the year in question.

## Relative poverty

- Low income,
- Non-student households etc.
- Low wealth

Subjective poverty

# The national register on wealth

- **Exists from 2014**
- **Full population coverage**

It contains data on:

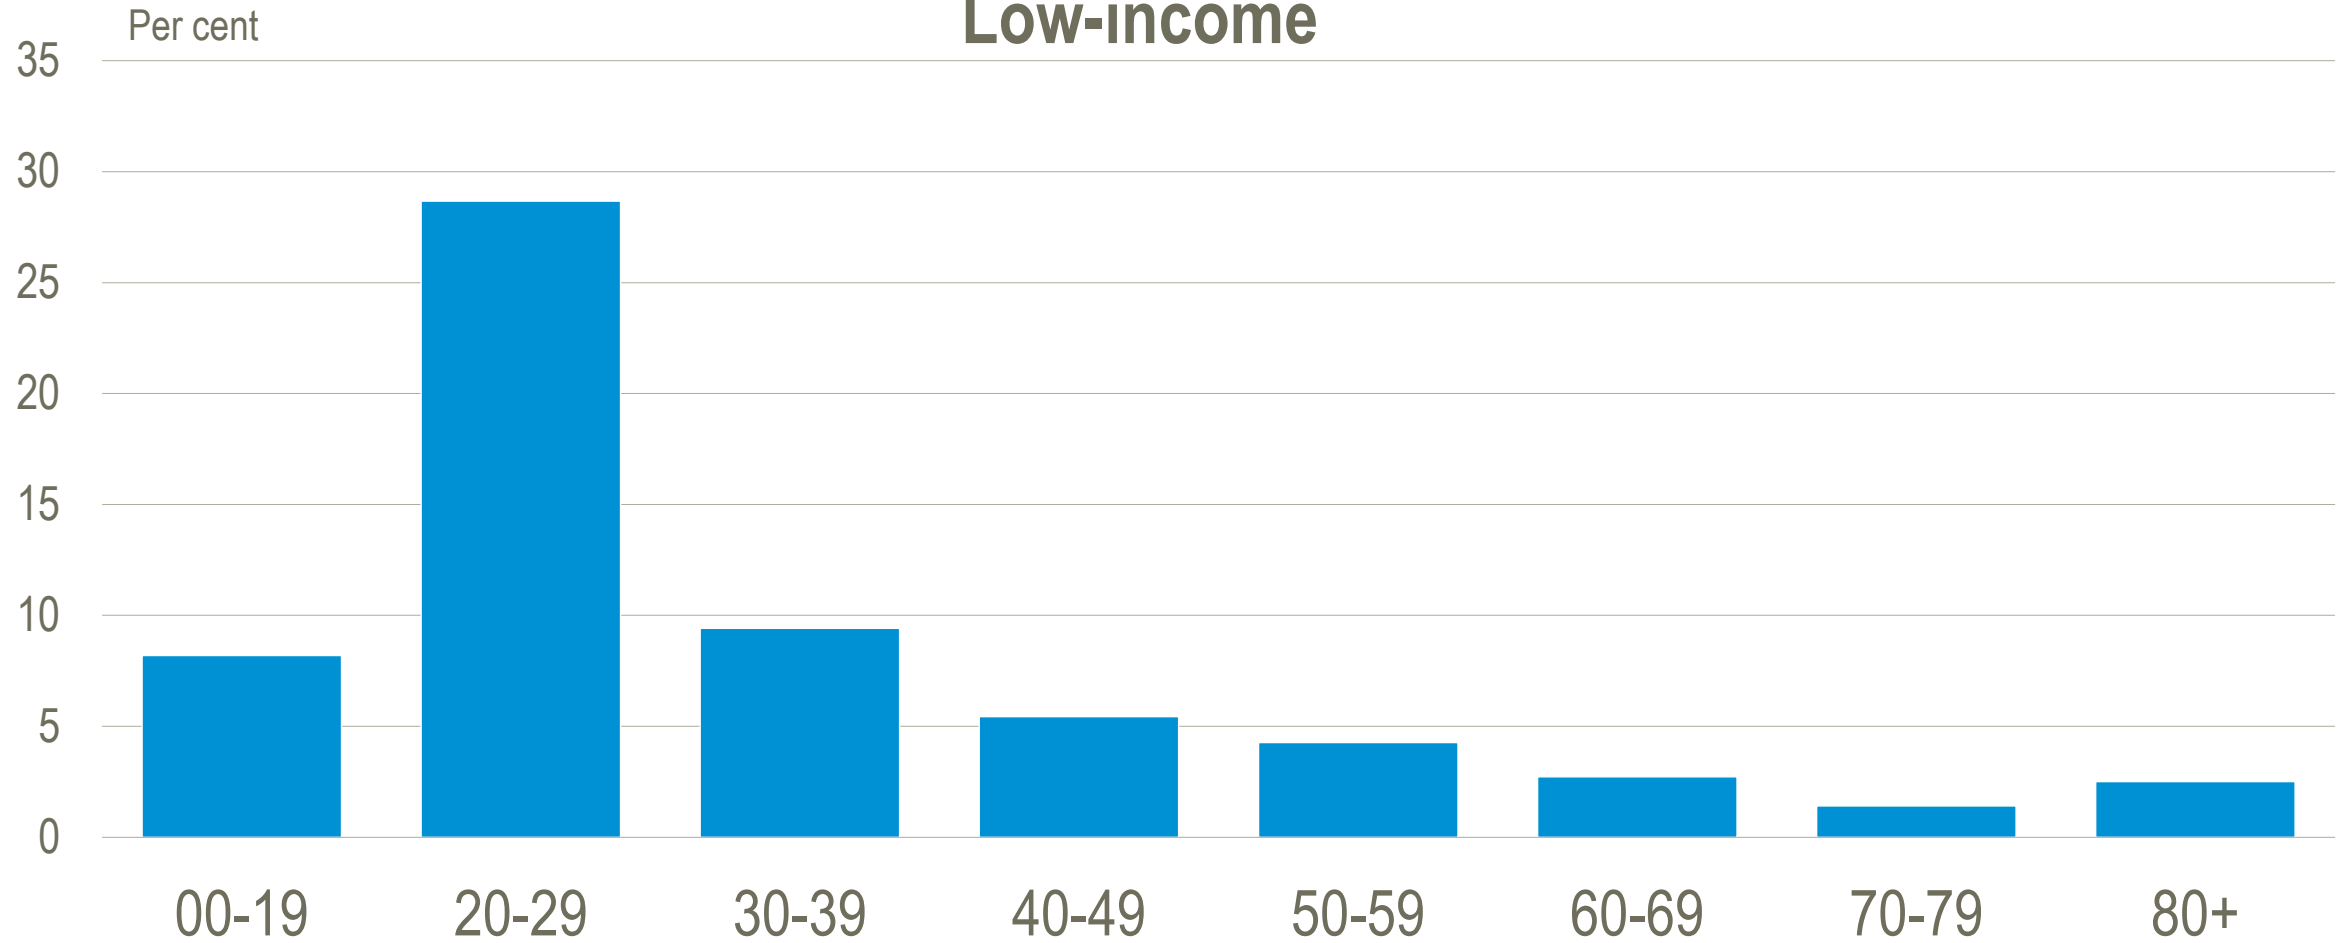

- Value of houses & cars
- Financial assets, including stocks and bonds in deposits
- Pension wealth (not used for relative poverty due to poor liquidity)
- Debt

# From low income to relative poverty

## Low-income

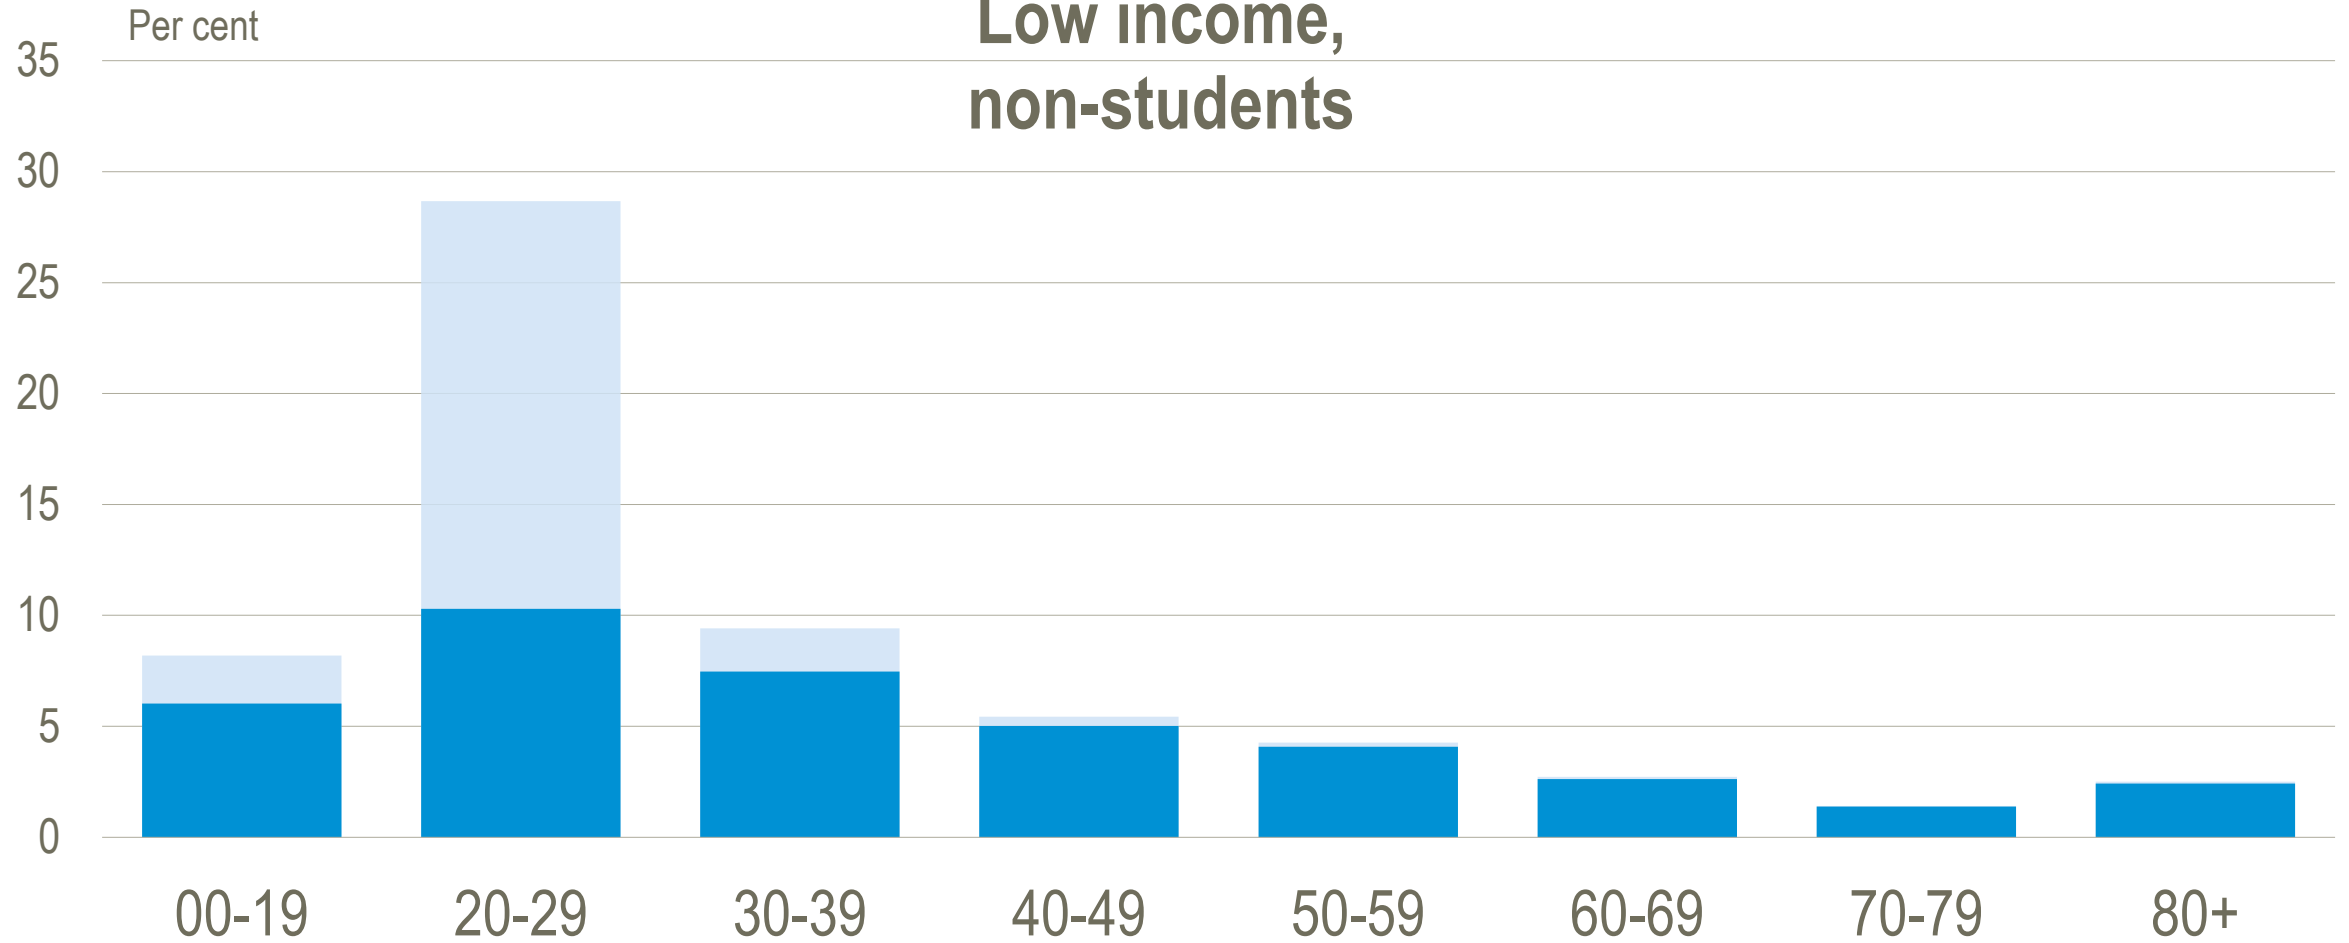

8,5 percent total in 2019

Age

# From low income to relative poverty

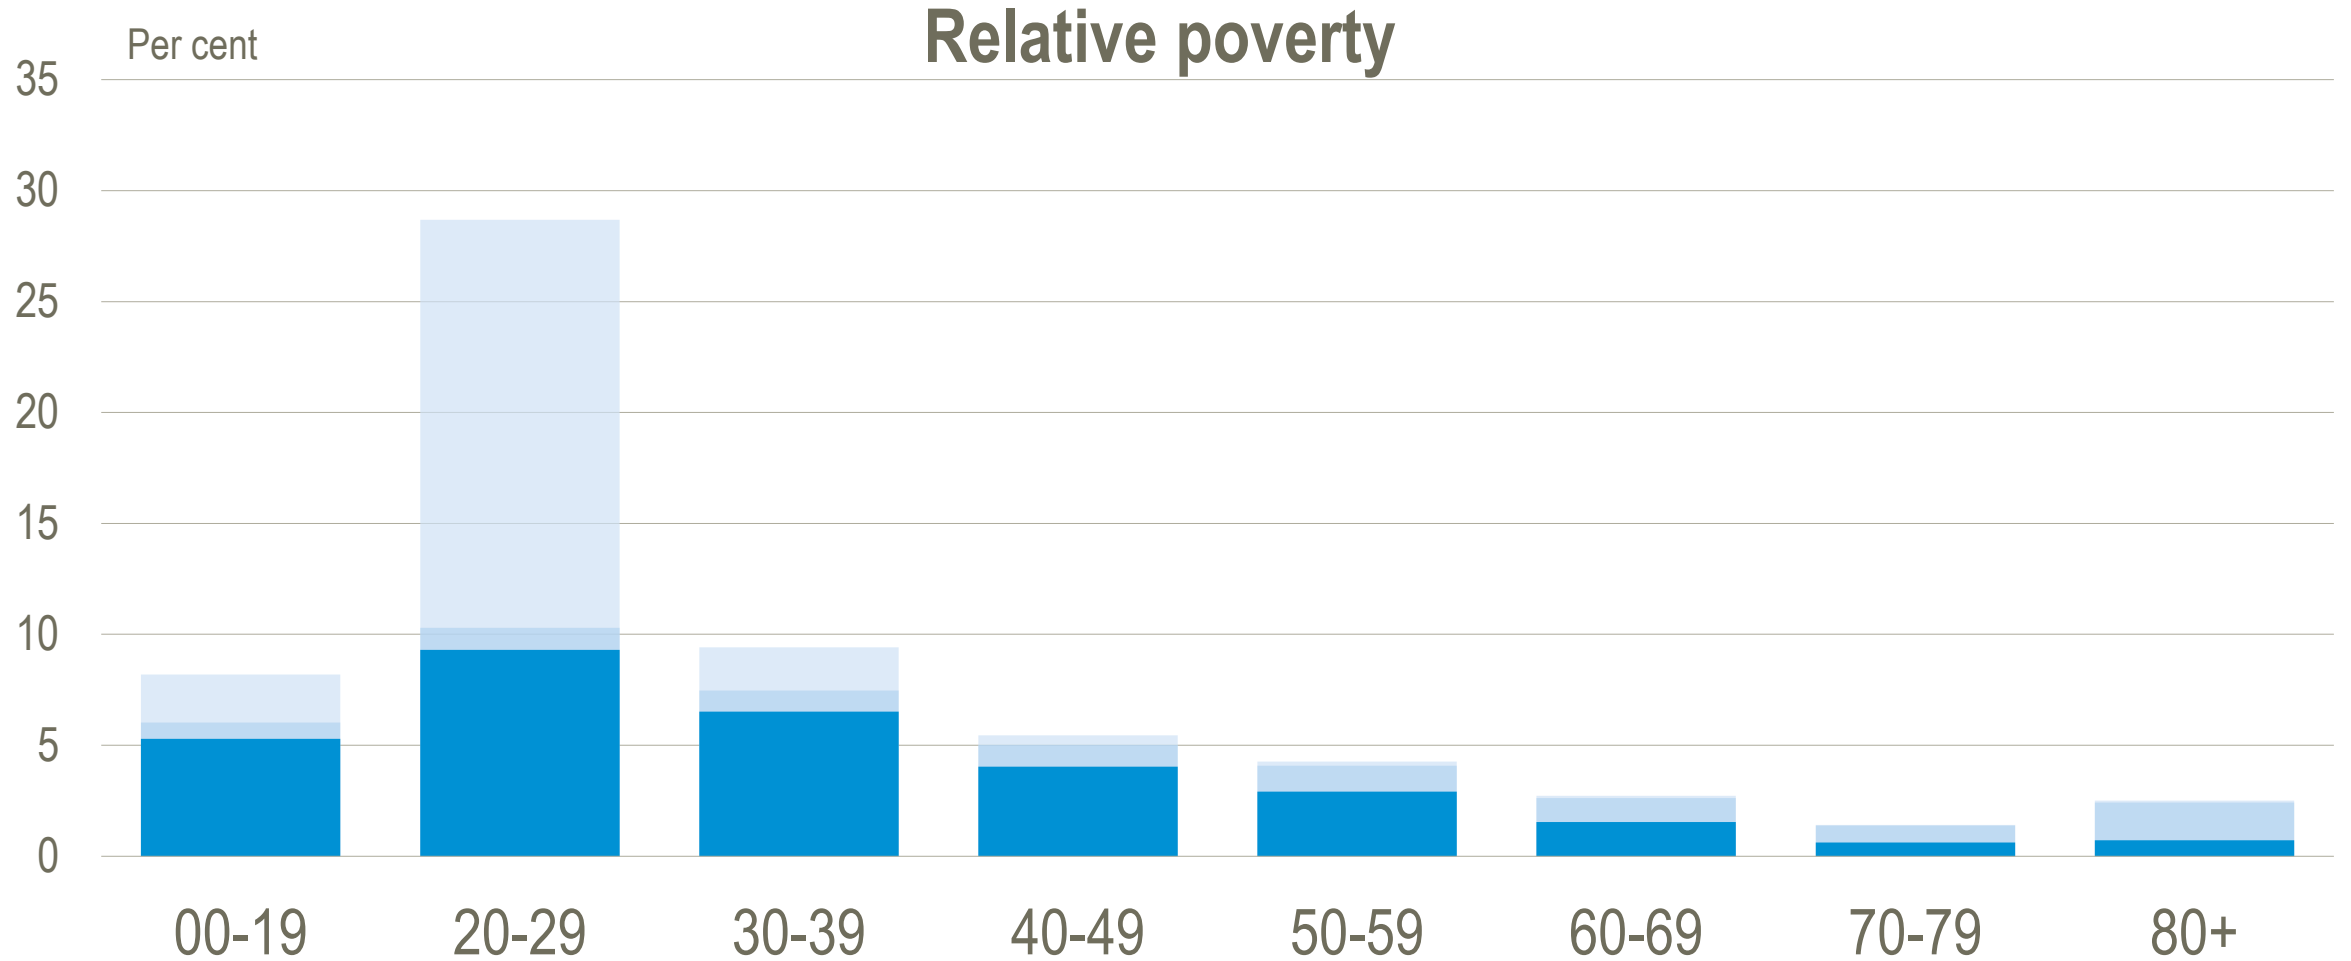

Low income,  
non-students

5,3 percent total in 2019

Age

# From low income to relative poverty

4,3 percent total in 2019

Age

# Ability to make ends meet by poverty status

# Conclusions

- Low income is a very broad definition of Poverty.
- It is a good indicator for *Risk of Poverty* – But it does include large groups that are very unlikely to be poor, when looking at other available data on education and wealth.
- Inclusion of data on education and wealth seems to improve precision of poverty indicators at the individual level
