UNITED NATIONS ECONOMIC COMMISSION FOR EUROPE

The United Nations Economic Commission for Europe (UNECE) is one of the five United Nations regional commissions, administered by the Economic and Social Council (ECOSOC). It was established in 1947 with the mandate to help rebuild post-war Europe, develop economic activity and strengthen economic relations among European countries, and between Europe and the rest of the world. During the Cold War, UNECE served as a unique forum for economic dialogue and cooperation between East and West. Despite the complexity of this period, significant achievements were made, with consensus reached on numerous harmonization and standardization agreements.

In the post-Cold War era, UNECE acquired not only many new member States, but also new functions. Since the early 1990s the organization has focused on assisting the countries of Central and Eastern Europe, Caucasus and Central Asia with their transition process and their integration into the global economy.

Today, UNECE supports its 56 member States in Europe, Central Asia and North America in the implementation of the 2030 Agenda for Sustainable Development with its Sustainable Development Goals (SDGs). UNECE provides a multilateral platform for policy dialogue, the development of international legal instruments, norms and standards, the exchange of best practices and economic and technical expertise, as well as technical cooperation for countries with economies in transition.

Offering practical tools to improve people's everyday lives in the areas of environment, transport, trade, statistics, energy, forestry, housing, and land management, many of the norms, standards and conventions developed in UNECE are used worldwide, and a number of countries from outside the region participate in UNECE's work.

UNECE's multisectoral approach helps countries to tackle the interconnected challenges of sustainable development in an integrated manner, with a transboundary focus that helps devise solutions to shared challenges. With its unique convening power, UNECE fosters cooperation among all stakeholders at the country and regional levels.

TRANSPORT IN UNECE

The UNECE Sustainable Transport Division is the secretariat of the Inland Transport Committee (ITC) and the ECOSOC Committee of Experts on the Transport of Dangerous Goods and on the Globally Harmonized System of Classification and Labelling of Chemicals. The ITC and its 20 working parties, as well as the ECOSOC Committee and its sub-committees are intergovernmental decision-making bodies that work to improve the daily lives of people and businesses around the world, in measurable ways and with concrete actions, to enhance traffic safety, environmental performance, energy efficiency and the competitiveness of the transport sector.

The ECOSOC Committee was set up in 1953 by the Secretary-General of the United Nations at the request of the Economic and Social Council to elaborate recommendations on the transport of dangerous goods. Its mandate was extended to the global (multi-sectoral) harmonization of systems of classification and labelling of chemicals in 1999. It is composed of experts from countries which possess the relevant expertise and experience in the international trade and transport of dangerous goods and chemicals. Its membership is restricted in order to reflect a proper geographical balance between all regions of the world and to ensure adequate participation of developing countries. Although the Committee is a subsidiary body of ECOSOC, the Secretary-General decided in 1963 that the secretariat services would be provided by the UNECE Sustainable Transport Division.

ITC is a unique intergovernmental forum that was set up in 1947 to support the reconstruction of transport connections in post-war Europe. Over the years, it has specialized in facilitating the harmonized and sustainable development of inland modes of transport. The main results of this persevering and ongoing work are reflected, among other things, (i) in 59 United Nations conventions and many more technical regulations, which are updated on a regular basis and provide an international legal framework for the sustainable development of national and international road, rail, inland water and intermodal transport, including the transport of dangerous goods, as well as the construction and inspection of road motor vehicles; (ii) in the Trans-European North-south Motorway, Trans-European Railway and the Euro-Asia Transport Links projects, that facilitate multi-country coordination of transport infrastructure investment programmes; (iii) in the TIR system, which is a global customs transit facilitation solution; (iv) in the tool called For Future Inland Transport Systems (ForFITS), which can assist national and local governments to monitor carbon dioxide (CO₂) emissions coming from inland transport modes and to select and design climate change mitigation policies, based on their impact and adapted to local conditions; (v) in transport statistics — methods and data — that are internationally agreed on; (vi) in studies and reports that help transport policy development by addressing timely issues, based on cutting-edge research and analysis. ITC also devotes special attention to Intelligent Transport Services (ITS), sustainable urban mobility and city logistics, as well as to increasing the resilience of transport networks and services in response to climate change adaptation and security challenges.

In addition, the UNECE Sustainable Transport and Environment Divisions, together with the World Health Organization (WHO) — Europe, co-service the Transport Health and Environment Pan-European Programme (THE PEP).

INTRODUCTION

Deaths and injuries resulting from road traffic accidents (RTA) remain a serious problem globally, and represent the leading cause of deaths for people aged 5-29 worldwide.¹ With the aim of helping countries to monitor accidents, patterns of accidents and for planning improvement in RTA in the ECE region, the Sustainable Transport Division publishes every two years Statistics of Road Traffic Accidents in Europe and North America. This data-driven publication provides a comprehensive picture of deaths and injuries caused by Road Traffic Accidents. The fifty-seventh edition of this publication is purely statistical in character and **is limited to road traffic accidents involving personal injury and excludes accidents where only damage to vehicles was reported.**

Part I of the report presents an overview of RTA trends in the ECE region for the years 2009–2019. It also includes charts and summary tables on the overall situation and developments in road injuries and casualties focusing on the results for number of accidents, number of persons killed, number of persons injured and deaths rates.

In part II of the report, accidents, fatalities and injuries are provided in more detail by country. These are organized in 3 tables as follows:

1. Accidents, fatalities and injured persons by location, time of occurrence and road condition.
2. Accidents, fatalities and injured persons by nature of the accident, such as accidents between vehicles, rear end collisions, head on collisions, collisions at level crossings, etc.
3. Fatalities and injured persons by gender and age.

Part III presents background statistics such as road vehicle fleet, vehicle kilometres run and population distribution by age group.

Although this publication reports the main variables around RTA deaths and injuries, it is not exhaustive of all the results of RTA. It focuses on presenting the top line results. For complete details on RTA please refer to the Road Safety statistics published online on the UNECE's regularly updated Transport Statistics Database (w3.unece.org/PXWeb/en).

Background

In 2010, the United Nations General Assembly (resolution 64/255) proclaimed a Decade of Action for Road Safety. Target 3.6 of the 2030 Agenda for Sustainable Development has the aim of halving the overall number of road deaths by 2020 compared to 2010. Through United Nations General Assembly (resolution 74/299), a second Decade of Action for Road Safety 2021-2030 has been declared with the explicit target to reduce road deaths and injuries by at least fifty per cent during this period.

The data presented in this publication is used to monitor progress towards the corresponding target 3.6 of SDG 3: *By 2030 halve the number of global deaths and injuries from road traffic accidents*; as well as target 9.1 of SDG 9: *Develop quality, reliable, sustainable and resilient infrastructure, including regional and trans-border infrastructure, to support economic development and human well-being, with a focus on affordable and equitable access for all*; and target 11.2 of SDG 11: *By 2030 provide access to safe, affordable, accessible and sustainable transport systems for all, improving road safety, notably by expanding public transport, with special attention to the needs of those in vulnerable situations, women, children, persons with disabilities and older persons.*

Sources

The report was compiled by the Secretariat of the United Nations Economic Commission for Europe on the basis of replies to questionnaires submitted by member countries and from official national and international sources as of August 2021. Data for the majority of European Union member States and European Free Trade Association countries came from the European Commission CARE database.

UNECE member countries and nomenclature

As of August 2021, the Economic Commission for Europe is composed of the following 56 member countries:

Albania, Andorra, Armenia, Austria, Azerbaijan, Belarus, Belgium, Bosnia and Herzegovina, Bulgaria, Canada, Croatia, Cyprus, Czechia, Denmark, Estonia, Finland, France, Georgia, Germany, Greece, Hungary, Iceland, Ireland, Israel, Italy, Kazakhstan, Kyrgyzstan, Latvia, Liechtenstein, Lithuania, Luxembourg, Malta, Monaco, Montenegro, Netherlands, North Macedonia, Norway, Poland, Portugal, Republic of Moldova, Romania, Russian Federation, San Marino, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Tajikistan, Turkey, Turkmenistan, Ukraine, United Kingdom of Great Britain and Northern Ireland, United States of America and Uzbekistan.

Comparability and limitations of data

The UNECE, in cooperation with Eurostat and the International Transport Forum (ITF), has made efforts to minimize the differences in reporting between countries through the publication and regular updates of the Glossary for Transport Statistics, the fifth edition of which is available at www.unece.org/index.php?id=52120.

Data are presented in line with the commonly agreed upon definitions from the Glossary as approved by the UNECE Inland Transport Committee (see annex). Footnotes in tables indicate where countries have provided explanations for departures from these definitions.

The comparability of data is also subject to differences in road accident reporting standards. Notably, the number of accidents and the number of injuries may be underreported in some countries due to administrative or practical limitations. In particular, the data for injuries have the largest comparability challenges between countries.

Note that in Part II of this report, the replies to the questionnaires provided by the participating countries included their latest data available. Therefore, the latest available year varies between 2019 and 2020.

While almost all countries report the totals of deaths and injured persons, not all countries report the full disaggregation of these data into the detailed categories presented in this publication. As a result of this the sum of disaggregations do not match the totals for categories in some cases.

Rounding

Where necessary, each figure has been rounded off to the nearest whole number. For this reason, some discrepancies may appear between the sum of the constituent items and the totals shown.

Time period

Most of the statistics are presented in the form of time series. In general, the data for the latest year should be considered provisional while those of previous years are final.

Data inquiries

Comments or enquiries are welcome and should be addressed to: stat.trans@un.org.

ROAD SAFETY IN THE ECE REGION

UNECE data show that in 2019 around 98,500 people died as a result of road traffic accidents. This represents an average of 270 persons dying each day from RTAs in the region. In addition to fatalities, countries also reported nearly 5 million people were injured in 2019 from RTAs. (The COVID-19 pandemic had a noticeable effect on RTAs from March 2020 onwards, which is discussed below).

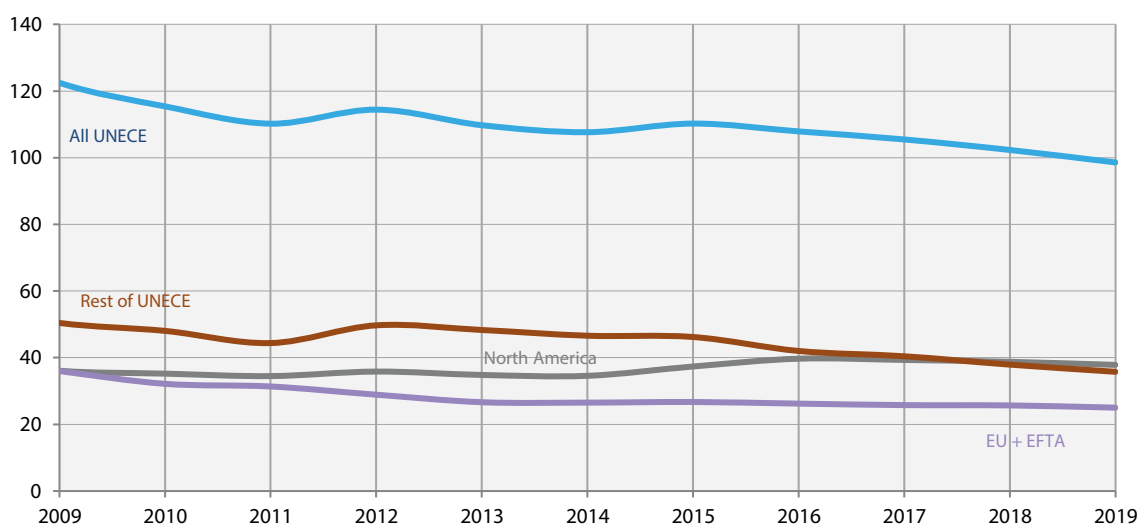

In the same year, the overall road traffic accident fatality rate in the region was reported as 82 per million inhabitants. Both North America and other UNECE member States outside the European Union (EU) and European Free Trade Association (EFTA) reported rates greater than this, while rates for EU and EFTA countries were considerably lower.

While the progress in reducing RTAs in the ECE region has been insufficient for achieving Sustainable Development Goal target 3.6, the modest reduction in fatalities should be set in context of other regions of the world seeing increasing fatalities over this period.

Trends in road traffic fatalities by region

Between 2009 and 2019, the total number of fatalities in road traffic accidents decreased by around 20 per cent in the ECE region (see figure I). This positive trend has slowed somewhat over this time period; 2010's figure was a 6% reduction on 2009, while 2019 was a 4% improvement on 2018.

Figure I Road traffic fatalities by region (thousands), 2009-2019

Source: UNECE Transport Database.

There are some marked regional differences; European² countries reported a decrease of 31 per cent in road traffic deaths during 2009-2019; the Rest of UNECE (covering Central Asia and Eastern Europe) reported a decrease of 29 per cent, whereas North America reported a 5 per cent increase.

Road traffic fatalities by country

The generally positive overall trends in road traffic fatalities per inhabitant show large disparities between countries.

² European Union, European Free Trade Association and the United Kingdom of Great Britain and Northern Ireland.

Figure II Road traffic fatalities per million inhabitants by country, 2019

Source: UNECE Transport Database.

In 2019, the member States with the highest fatality rates reported incident rates around seven and a half times higher than those with the lowest fatality rates. Figure II shows Road traffic accident fatalities per million inhabitants, for all UNECE member States.

The highest fatality rates of countries with available data were reported in Kazakhstan (130 per million inhabitants), Georgia (129 per million inhabitants), Kyrgyzstan (118 per million inhabitants), and Armenia (115 per million inhabitants).

Figure III Map of road traffic fatalities per million inhabitants by country, 2019

Source: UNECE Transport Database, Grey represents countries outside of the ECE region or for which data for 2019 were not available.

Countries with the lowest road traffic fatality rates in 2019 are Iceland (17 per million inhabitants), Norway (20), Sweden (22) and Switzerland (22).

Figure III shows a map of Road Traffic Accident fatalities per million inhabitants by country.

Trends in road traffic fatalities by country

Although the number of fatalities has continued to decrease in the region, trend analyses reveal clear differences between countries' progressions. The table shows the percentage of change in RTA fatalities between 2009 and 2019 in countries that had the largest decreases in RTA fatalities by percentage. The largest decrease was reported in Iceland where the fatalities fell by 65 per cent, followed by Belarus and Turkmenistan.

Table II Ten largest percentage decreases in road traffic fatalities, 2009-2019

Country	Change per cent
Iceland	-65
Belarus	-62
Turkmenistan	-57
Luxembourg	-54
Greece	-53
Lithuania	-50
Norway	-49
Latvia	-48
Estonia	-47
Switzerland	-46

Source: UNECE Transport Database. Liechtenstein and San Marino are excluded from this table due to the very low number of fatalities in their countries each year.

Gender differences in road safety

Although all types of road users are at risk of being injured or killed in a road traffic accident, there are notable differences in fatality rates between women and men.

In 2019, males accounted for 74 per cent of all road traffic fatalities in the 40 UNECE member States reporting data. Road traffic fatality rates are higher in men than in women in all these UNECE member States. The gender difference in fatality rates is likely related to the longer distances males typically drive, and increased likelihood of male drivers to be under the influence of alcohol, or other less documented factors such as different driving patterns or different attitudes to risk to both exposure and risk-taking behaviour.

The reported difference in fatality rates between genders is consistent for all countries reporting data though there are substantial differences between countries.

COVID-19 and trends in 2020

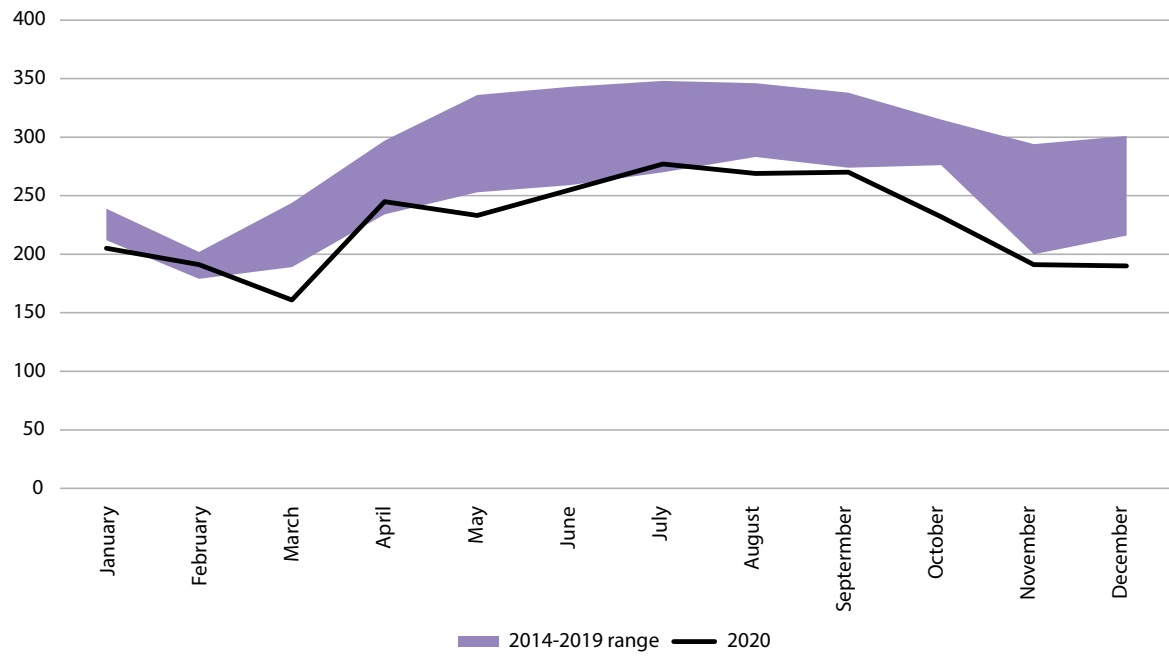

The COVID-19 pandemic in 2020 resulted in varying degrees of lockdowns and other restrictions in different ECE member States. While these restrictions reduced vehicle traffic to a greater or lesser degree, the impact on RTAs was more nuanced. For the 22 ECE countries who provided finalised annual data at the time of publication, 15 saw decreases, and a simple summation of these countries saw an overall decrease of 8 per cent. In order to track changes in road safety performance on a near-term basis as the pandemic unfolded, the secretariat also compiled short-term data directly from national sources when available.³ Figure IV shows the monthly evolution of road traffic fatalities in metropolitan France, and shows the unprecedented drops in fatalities during the separate lockdowns in March-June and then again September onwards. While the reductions in fatalities were a positive trend resulting from less traffic, it should be noted that the fatality reductions were less pronounced than the reductions in road traffic, indicating that relative safety had not improved. Figure V shows the same data for Germany. A broadly similar pattern was observed, although the monthly fatality reductions were much less pronounced in comparison to the historical data than was the case for France.

Figure IV Provisional monthly road traffic fatalities in Metropolitan France, 2014-2020

Source: French Road Safety Observatory.

³ <https://wiki.unece.org/display/DSOCIOT/Data+Sources+on+Coronavirus+impact+on+transport>.

Figure V Monthly road traffic fatalities in Germany, 2014-2020

A photograph of a city street at dusk. The street is lined with various buildings, including a tall modern glass skyscraper on the left and older, multi-story buildings with balconies on the right. Streetlights are on, and a sign on the sidewalk reads "SERVIS". The sky is a mix of orange and blue. The text "SUMMARY TABLES" is overlaid on the right side of the image.

NOTES TO TABLE B

Country notes

- ¹ 2019 data from the UNECE/ITF/Eurostat common questionnaire.
- ² 2017-2019 data from the UNECE/ITF/Eurostat common questionnaire.
- ³ 2018-2019 data from the UNECE/ITF/Eurostat common questionnaire.
- ⁴ Until 2015 figures on persons killed include the deaths only at the accident scene. Since 2015 figures on persons killed also include the deaths within 30 days after the traffic accidents due to related accident and its impacts for people injured and sent to health facilities.

NOTES TO TABLE 1**Country notes**

- ¹ Data on accidents by light and road conditions is provided for the accidents registered by the Patrol Police Department of the Ministry of Internal Affairs of Georgia.
- ² Accident and injury estimates are rounded to the nearest thousand. As a result, the sum of a classification's subcomponents may not add up to the total for that classification.

2. Road traffic accidents involving personal injury by nature of accident

NOTES TO TABLE 2

Country notes

- ¹ Starting from January 1st, 2020, a new database for road traffic accidents is in use in the Ministry of Internal Affairs, North Macedonia. This assigns several natures of accident for a single traffic accident. That is why the breakdown of the number of road traffic accidents, fatalities and injuries by nature of accident do not add up to the total.

3. Persons killed or injured in road traffic accidents by gender and age group

NOTES TO TABLE 5

Country notes

- ¹ "Vehicle-kilometres" for "Lorries and road tractors" refer to lorries.
- ² "Vehicle-kilometres" refers to only vehicles with national registration. "Vehicles-kilometres" for "Lorries and road tractors" refers to only vehicles above 6 tonnes.
- ³ "Vehicle-kilometres" refers to only vehicles with national registration.
- ⁴ Refers to motorway traffic only.
- ⁵ "Vehicle-kilometres" excludes foreign motorcycles on national territory and "vehicle-kilometres" of "Lorries and road tractors" includes special purpose vehicles.
- ⁶ "Vehicle kilometres" for "Motorcycles" and "Motor coaches, Buses, etc." exclude foreign vehicles.
- ⁷ "Vehicle kilometres" of "Motor coaches, Buses, etc." refer to public transport only.
- ⁸ "Motor vehicle movements on national territory, irrespective of country of registration" refers to public transport only.
- ⁹ "Vehicle-kilometres" of "motorcycles" includes mopeds.
- ¹⁰ Does not include travel on urban roads.
- ¹¹ Refers to Great Britain. Light vans included in 'Lorries and road tractors' from 2010 onwards.

Annex

DEFINITIONS⁴ AND GENERAL NOTES

A. Definitions relevant to the tables of this Bulletin

Injury accident: Any accident involving at least one road vehicle in motion on a public road or private road to which the public has right of access, resulting in at least one injured or killed person.

A suicide or an attempted suicide is not an accident but an incident caused by a deliberate act to injure oneself fatally. However, if a suicide or an attempted suicide causes injury to another road user, then the incident is regarded as an injury accident.

Included are: collisions between road vehicles; between road vehicles and pedestrians; between road vehicles and animals or fixed obstacles and with one road vehicle alone. Included are collisions between road and rail vehicles. Multi-vehicle collisions are counted as only one accident provided that any successive collisions happen at very short intervals. Injury accident excludes accidents incurring only material damage.

Excluded are terrorist acts.

Fatal accident: Any injury accident resulting in a person killed.

Non-fatal accident: Any injury accident other than a fatal accident.

Casualty: Any person killed or injured as a result of an injury accident.

Person killed: Any person killed immediately or dying within 30 days as a result of an injury accident, excluding suicides.

A killed person is excluded if the competent authority declares the cause of death to be suicide, i.e. a deliberate act to injure oneself resulting in death. For countries that do not apply the threshold of 30 days, conversion coefficients are estimated so that comparisons on the basis of the 30 day-definition can be made.

Person injured: Any person who as result of an injury accident was not killed immediately or not dying within 30 days, but sustained an injury, normally needing medical treatment, excluding attempted suicides.

Persons with lesser wounds, such as minor cuts and bruises are not normally recorded as injured.

An injured person is excluded if the competent authority declares the cause of the injury to be attempted suicide by that person, i.e. a deliberate act to injure oneself resulting in injury, but not in death.

Person seriously injured: Any person injured who was hospitalized for a period of more than 24 hours.

Person slightly injured: Any person injured excluding persons killed or seriously injured.

Persons with lesser wounds, such as minor cuts and bruises are not normally recorded as injured.

Accident between road vehicle and pedestrian: Any injury accident involving one or more road vehicle and one or more pedestrian.

Included are accidents irrespective of whether a pedestrian was involved in the first or a later phase of the accident and whether a pedestrian was injured or killed on or off the road.

⁴ Definitions are adapted from the Illustrated Glossary for Transport Statistics, Fifth Edition published in 2019 (www.unecce.org/fileadmin/DAM/trans/main/wp6/pdfdocs/Glossary_for_Transport_Statistics_EN.pdf).

Single road vehicle accident: Any injury accident in which only one road vehicle is involved.

Included are accidents of vehicles trying to avoid collision and veering off the road, or accidents caused by collision with obstruction or animals on the road. Excluded are collisions with pedestrians and parked vehicles.

Multi-vehicle road accident: Any injury accident involving two or more road vehicles only.

The following types of injury accidents involving two or more road vehicles are:

(a) Rear-end collision: collision with another vehicle using the same lane of a carriageway and moving in the same direction, slowing or temporarily halted.

Excluded are collisions with parked vehicles.

(b) Head-on collision: collision with another vehicle using the same lane of a carriageway and moving in the opposite direction, slowing or temporarily halted.

Excluded are collisions with parked vehicles.

(c) Collision due to crossing or turning: collision with another vehicle moving in a lateral direction due to crossing, leaving or entering a road.

Excluded are collisions with vehicles halted and waiting to turn which should be classified under (a) or (b).

(d) Other collisions, including collisions with parked vehicles: collision occurring when driving side by side, overtaking or when changing lanes; or collision with a vehicle which has parked or stopped at the edge of a carriageway, on shoulders, marked parking spaces, footpaths or parking sites, etc.

Included in (d) are all collisions not covered by (a), (b) and (c). The constituent element for classification of accidents between vehicles is the first collision on the carriageway, or the first mechanical impact on the vehicle.

B. Other definitions

Road outside built-up areas: Road outside the boundaries of a built-up area, which is an area with entries and exits sign-posted as such.

Motorways are excluded

Dry road surface: A road surface not covered by water, snow, ice or other substances.

Other road surface: Any other road surface other than a dry road surface.

Motorway/freeway: Road, specially designed and built for motor traffic, which does not serve properties bordering on it, and which:

- (a) Is provided, except at special points or temporarily, with separate carriageways for traffic in two directions, separated from each other, either by a dividing strip not intended for traffic, or exceptionally by other means;
- (b) Has no crossings at the same level with any road, railway or tramway track, or footpath;
- (c) Is specially sign-posted as a motorway and is reserved for specific categories of road motor vehicles.

Entry and exit lanes of motorways are included irrespective of the location of the sign-posts.

Urban motorways are also included.

Road inside a built-up area: A road within the boundaries of a built-up area, with entries and exits sign-posted as such.

Excluded are motorways, express roads and other roads of higher speed traversing the built-up area, if not signposted as built-up roads. Streets are included.

Road vehicle: A vehicle running on wheels and intended for use on roads.

Road motor vehicle: A road vehicle fitted with an engine whence it derives its sole means of propulsion, which is normally used for carrying persons or goods by road, or for hauling, on the road, vehicles used for the carriage of persons or goods

Moped: Two, three or four-wheeled road motor vehicle which is fitted with an engine having a cylinder capacity of less than 50cc and a maximum authorized design speed in accordance with national regulations. Where limitations concerning the engine displacement are not applicable a restriction in terms of motor power may be in force. Refers to categories L₁ and L₂ of the UN Consolidated Resolution on the Construction of Vehicles (R.E.3).

Registered and non-registered mopeds in use are included, whether or not they have a number plate. Some countries do not register all mopeds.

Motor cycle: Two-, three- or four-wheeled road motor vehicle not exceeding 400 kg of unladen weight. All such vehicles with a cylinder capacity of 50 cc or over are included, as are those under 50 cc which do not meet the definition of moped. Refers to categories L₃, L₄, L₅, L₆ and L₇ of the UN Consolidated Resolution on the Construction of Vehicles (R.E.3).

Passenger car: Road motor vehicle, other than a moped or a motor cycle intended for the carriage of passengers and designed to seat no more than nine persons (including the driver). Refers to category M₁ of the UN Consolidated Resolution on the Construction of Vehicles (R.E.3).

Included are:

- (a) Passenger cars
- (b) Vans designed and used primarily for transport of passengers
- (c) Taxis
- (d) Hire cars
- (e) Ambulances
- (f) Motor homes.

Excluded are light goods road vehicles (see definition below) as well as buses, coaches and trolleybuses (see definition below).

"Passenger car" includes microcars (needing no permit or having the same requirements as mopeds to be driven), taxis and passenger hire cars, provided that they have fewer than ten seats.

Buses, coaches and trolleybuses: Passenger road motor vehicle designed to carry 10 or more seated or standing persons (including the driver) and is not rail-borne. Refers to categories M₂ and M₃ of the UN Consolidated Resolution on the Construction of Vehicles (R.E.3).

Goods road vehicle: Road vehicle designed, exclusively or primarily, to carry goods. Includes categories N and O of the UN Consolidated Resolution on the Construction of Vehicles (R.E. 3).

Included are:

- (a) *Light goods road vehicles with a gross vehicle weight of not more than 3 500 kg, designed exclusively or primarily, to carry goods or to be used by craftsmen, e.g. vans, pick-ups, and two- or three-wheeled vehicles;*
- (b) *Heavy goods road vehicles with a gross vehicle weight above 3 500 kg, designed, exclusively or primarily, to carry goods;*
- (c) *Road tractors;*
- (d) *Trailers and semi-trailers;*
- (e) *Agricultural tractors permitted to use roads open to public traffic.*

Goods road motor vehicle: Any single road motor vehicle designed to carry goods (e.g. a lorry), or any coupled combination of road vehicles designed to carry goods (i.e. lorry with trailer(s), or road tractor with or without semi-trailer and with or without trailer).

Lorry/Truck: Rigid road motor vehicle designed, exclusively or primarily, to carry goods.

Road tractor (semi-trailer tractor): Road motor vehicle designed, exclusively or primarily, to haul other road vehicles which are not power-driven (mainly semi-trailers).

Agricultural tractors are excluded.

Gross vehicle weight (Legally permissible maximum weight): Total of the weight of the vehicle (or combination of vehicles) including its load when stationary and ready for the road declared permissible by the competent authority of the country of registration.

This includes the weight of the driver and the maximum number of persons permitted to be carried.

Statistics of Road Traffic Accidents in Europe and North America

This publication provides comparable data on road traffic accidents in Europe, Canada and the United States. Data are organized by the nature of accident, and the number of persons killed or injured, by category or road user, age group and sex. As background data, figures on the number of road vehicles in use and vehicle-kilometers run by road vehicles are also provided along with estimates of population and distribution by age group. This publication contains important statistical information for those involved in road safety issues and the data directly monitor Sustainable Development Goal target 3.6.
