
UNECE STANDARD DDP-07

concerning the marketing and
commercial quality control of

Prunes

2021 EDITION

UNITED NATIONS
New York and Geneva, 2021

NOTE

Working Party on Agricultural Quality Standards

The commercial quality standards developed by the United Nations Economic Commission for Europe (UNECE) Working Party on Agricultural Quality Standards help facilitate international trade, encourage high-quality production, improve profitability and protect consumer interests. UNECE standards are used by Governments, producers, traders, importers and exporters, and other international organizations. They cover a wide range of agricultural products, including fresh fruit and vegetables, dry and dried produce, seed potatoes, meat, cut flowers, eggs and egg products.

Any member of the United Nations can participate, on an equal footing, in the activities of the Working Party. For more information on agricultural standards, please visit our website <http://www.unece.org/trade/agr/welcome.html>.

The revised Standard for Prunes is based on document ECE/CTCS/WP.7/2021/13, reviewed and adopted by the Working Party in 2021 (followed by a silence procedure in line with the special procedures during the COVID-19 period).

The designations employed and the presentation of the material in this publication do not imply the expression of any opinion whatsoever on the part of the United Nations Secretariat concerning the legal status of any country, territory, city or area or of its authorities, or concerning the delimitation of its frontiers or boundaries. Mention of company names or commercial products does not imply endorsement by the United Nations.

All material may be freely quoted or reprinted, but acknowledgement is requested.

UNECE standard DDP-07 concerning the marketing and commercial quality control of Prunes¹

I. Definition of produce

This standard applies to prunes (dried ripe plums) of varieties (cultivars) grown from *Prunus domestica* L. intended for direct consumption or for food when intended to be mixed with other products for direct consumption without further processing. This standard does not apply to prunes that are processed by salting, sugaring, flavouring or roasting or for industrial processing.

Prunes may be presented in one of the following styles:

- Whole, unpitted from which pits have not been removed
- Whole, pitted; from which pits have been removed.

II. Provisions concerning quality

The purpose of the standard is to define the quality requirements for prunes after preparation and packaging.

However, if applied at stages following export or dispatch, the holder/seller shall be responsible for observing the requirements of the standard. The holder/seller of products may not display such products or offer them for sale or deliver or market them in any manner other than in conformity with this standard.

A. Minimum requirements²

In all classes, subject to the special provisions for each class and the tolerances allowed, the prunes must be:

- without peduncle
- fleshy, the flesh being elastic and pliable
- sound, produce being affected by rotting or deterioration such as to make it unfit for human consumption is excluded
- clean, practically free from any visible foreign matter
- free from living pests, whatever their stage of development
- free from damage caused by pests, including the presence of dead insects and/or mites, their debris or excreta
- free from damage to skin and/or flesh affecting an aggregate dimension more than 20 mm in diameter such as:
 - callous growth-cracks, occurring at the ends of prunes, scars, splits or breaks
 - splits or breaks exposing a substantial part of the flesh and seriously affecting the appearance of the fruit

¹ In some countries “prunes” is used interchangeably with “dried plums”. For ease of reading, the word “prunes” is used throughout the text. Anywhere it appears in the standard, the words “dried plums” can be substituted, including in the marking provisions.

² Definitions of terms and defects are listed in Annex III of the Standard Layout – Recommended terms and definition of defects for standards of dry (Inshell Nuts and Nut Kernels) and dried produce https://unece.org/sites/default/files/2020-12/DDP_StanLayout_2020_e_0.pdf.

- cracks, splits or breaks down to the stone in unpitted prunes
- free from mould filaments and insect/mites/parasite damage visible to the naked eye
- free of fermentation
- free of abnormal external moisture
- free of foreign smell and/or taste.

The condition of the prunes must be such as to enable them:

- to withstand transportation and handling
- to arrive in satisfactory condition at the place of destination.

B. Moisture content³

The prunes shall have a moisture content not exceeding 35.0 per cent.

However, prunes with a moisture content exceeding 35.0 per cent should be labelled as high moisture or equivalent denomination.

Prunes may be treated with preservatives or preserved by other means, (e.g., pasteurization).

C. Classification

In accordance with the defects allowed in section “IV. Provisions concerning tolerances”, prunes are classified into the following classes:

Class I and Class II.

The defects allowed must not affect the general appearance of the produce as regards quality, keeping quality and presentation in the package.

III. Provisions concerning sizing

Sizing of prunes is determined by the number of prunes in 500 g or in 1 lb (453 g). These stated designations are not correlated.

Pitted prunes must be sized after pitting.

To ensure uniformity in size, the subsequent tables or the numeral categories must be applied.

A. Size nomenclature by weight, per count

Table A
Designation per 500 g

Designation	Number of prunes per 500 g	
	Pitted prunes	Unpitted prunes
Super giant	not more than 44	not more than 32
Giant	from 45 to 56	from 33 to 44
Very large	from 57 to 72	from 45 to 55
Large	from 73 to 84	from 56 to 66

³ The moisture content is determined by one of the methods given in Annex I of the Standard Layout – Determination of the moisture content for dried produce https://unece.org/sites/default/files/2020-12/DDP_StanLayout_2020_e_0.pdf. The laboratory reference method shall be used in cases of dispute.

<i>Designation</i>	<i>Number of prunes per 500 g</i>	
	<i>Pitted prunes</i>	<i>Unpitted prunes</i>
Medium	from 85 to 100	from 67 to 77
Small	from 101 to 120	from 78 to 99
Very small	more than 120 prunes	more than 99

Table B
Pitted prunes designation per pound (453 g)

<i>Designation</i>	<i>Number of prunes per pound (453 g)</i>
Extra large	not more than 36 to 43 prunes
Large	from 44 to 53 prunes
Medium	from 54 to 67 prunes
Small	from 68 to 85 prunes

B. Numerical categories

Size categories may also be described numerically by the range of average count per 500 g or per pound (453 g), for example: 30/40; 35/45; 90/120 etc.

C. “Pressure-pitted prunes”

Sizing of pressure-pitted prunes is optional.

IV. Provisions concerning tolerances

At all marketing stages, tolerances in respect of quality and size shall be allowed in each lot for produce not satisfying the minimum characteristics of the class indicated.

<i>Defects allowed (percentages by weight or number)</i>	<i>Unpitted prunes</i>		<i>Pitted prunes</i>	
	<i>Class I</i>	<i>Class II</i>	<i>Class I</i>	<i>Class II</i>
(a) Tolerance for produce not meeting the minimum requirements	10	15	10	15
of which no more than				
Non-characteristic colour and texture	10	15	10	15
Fermented	1	2	1	2
Damaged by pests ^a	2	4	2	4
Rotten or deteriorated ^a	1	2	0.5	2
of which mouldy ^a	0.5	1	0.5	1
Skin or flesh damage, calluses, heat injury	2	4	2	4
End cracks			8	10
Living pests	0	0	0	0
(b) Size tolerances (if sized)				
For produce not conforming to the size indicated, in total, depending on the characteristics of the product	10	10	10	10

<i>Defects allowed (percentages by weight or number)</i>	<i>Unpitted prunes</i>		<i>Pitted prunes</i>	
	<i>Class I</i>	<i>Class II</i>	<i>Class I</i>	<i>Class II</i>
(c) Tolerances for other defects				
Extraneous matter i.e., stem (attached or pieces), leaves (whole or pieces) (by weight)	1	1	1	1
Foreign matter such as stones, metal, and glass (by weight)	0.1	0.1	0.1	0.1
Whole pits and pit fragments among pitted fruit	-	-	2	2

^a France does not permit tolerances for produce affected by pest damage, rot and mould.

V. Provisions concerning presentation

A. Uniformity

The contents of each package must be uniform and contain only prunes of the same origin, quality, size (if sized), variety (if indicated), crop year (if indicated).

The visible part of the contents of the package must be representative of the entire contents.

Prunes in Class I must be of the same variety.

B. Packaging

Prunes must be packed in such a way so as to protect the produce properly.

The materials used inside the package must be clean and of a quality so as to avoid causing any external or internal damage to the produce. The use of materials, particularly paper or stamps bearing trade specifications, is allowed provided the printing or labelling has been done with non-toxic ink or glue.

Packages must be free of all foreign and extraneous matter in accordance with the table of tolerances in section “IV. Provisions concerning tolerances”.

VI. Provisions concerning marking

Each package⁴ must bear the following particulars, in letters grouped on the same side, legibly and indelibly marked, and visible from the outside:

A. Identification

Packer and/or dispatcher:

Name and physical address (e.g. street/city/region/postal code and, if different from the country of origin, the country) or a code mark officially recognized by the national authority⁵ if a country applying such a system is listed in the UNECE database.

⁴ These marking provisions do not apply to sales packages presented in packages.

⁵ The national legislation of a number of countries requires the explicit declaration of the name and address. However, in cases where a code mark is used, the reference “packer and/or dispatcher” (or equivalent abbreviations) must be indicated in close connection with the code mark, and the code mark should be preceded with the ISO 3166 alpha country code of the recognizing country, if not the country of origin.

B. Nature of produce

- name of the produce: the words “prunes” “dried plums”, “unpitted prunes” “prunes with pits” “pitted prunes” or “pressure-pitted prunes”
- name of the variety (optional)
- high moisture or soft prunes or equivalent denomination and moisture content, where appropriate.

C. Origin of produce

- country of origin⁶ and, optionally, district where grown or the national, regional or local place name.

D. Commercial specifications

- class
- size expressed in accordance with the provisions of section III, either:
 - as the minimum and maximum number of prunes contained in 500 g or 1 lb (453 g), by “X/Y prunes per 500 g” “X/Y prunes per pound”; or
 - by the corresponding designation in 500 g or 1 lb (453 g)
- crop year (optional)
- “Best before” followed by the date (optional)/mandatory for high moisture produce
- net weight.

E. Official control mark (optional)

Adopted 1988

Revised 2021

Aligned with the Standard Layout 2020.

⁶ The full name or commonly used name should be given.
