

Cadastral mapping and land registration authorities' strategies in Europe

Date: Thursday, 3 February 2022

Time: 10:00-11:30 CET

Platform: webex

Language: English

The UNECE Working Party on Land Administration (WPLA) recently published the Scenario study on future land administration in the UNECE region with the purpose to better understand potential future directions of development of the land administration sector based on megatrends in combination with sector-specific drivers. The study is intended as a dialogue instrument for use in strategic planning, shaping visions and self-assessment as to where land administration authorities need to develop as agencies within their relevant land administration and land management ecosystems, and estimate their readiness as well as efforts required in order to remain relevant long-term.

The WPLA, jointly with partners, are hosting a series of webinars in 2022 to follow up on the outcomes of the Scenario study. This first webinar will focus on the strategy work, strategy drivers and strategic goals of land administration organizations. The webinar will offer different viewpoints from European land administration and mapping organizations' strategies and examples from the Finnish National Land Survey and Kadaster in the Netherlands.

Webinar programme, 3 February 2022

Time CET	Contribution title	Speaker
10:00-10:10	Welcome address	Moderator: Professor Kirsikka Riekkinen, University of Aalto, WPLA Vice-Chair
