Proposal for a new Supplement to the 07 series of amendments to UN Regulation No. 49 (Emissions of compression ignition and positive ignition (LPG and CNG) engines)

Submitted by the expert from the International Organization of Motor Vehicle Manufacturers*

The text reproduced below was prepared by the expert from the International Organization of Motor Vehicle Manufacturers (OICA). This document aims at permitting the use of hydrogen (H₂) as fuel for emissions type approval of heavy-duty vehicles. The modifications to the current text of the Regulation are marked in bold for new or strikethrough for deleted characters.

* In accordance with the programme of work of the Inland Transport Committee for 2022 as outlined in proposed programme budget for 2022 (A/76/6 (Sect.20), para 20.76), the World Forum will develop, harmonize and update UN Regulations in order to enhance the performance of vehicles. The present document is submitted in conformity with that mandate.
I. Proposal

Paragraph 4.6.2., amend to read:

"4.6.2. If the manufacturer permits the engine family to run on market fuels that do not comply neither with the reference fuels included in Annex 5 nor CEN standard EN 228 (in the case of unleaded petrol) or grade D (type I or II) of ISO standard ISO 14687 (in the case of hydrogen) or CEN standard EN 590 (in the case of diesel), such as running on FAME B100 (CEN standard EN14214), FAME diesel blends B20/B30 (CEN standard EN 16709), paraffinic fuel (CEN standard EN 15940) or others the manufacturer shall, in addition to the requirements in paragraph 4.6.1. comply with the following requirements:"

Insert new paragraph 4.12.3.3.8., to read:

"4.12.3.3.8. For hydrogen fuelled engines the approval mark shall contain a letter/s after the national symbol, the purpose of which is to distinguish the fuel type and the working principal the approval has been granted. This letter/s will be as follows:

(a) T in case of the PI engine being approved and calibrated for gaseous hydrogen
(b) TD in case of the CI engine being approved and calibrated for gaseous hydrogen
(c) U in case of the PI engine being approved and calibrated for liquefied hydrogen
(d) UD in case of the CI engine being approved and calibrated for liquefied hydrogen"

Paragraph 5.3., amend to read:

"5.3. Emission limits

Table 1 provides the emissions limits that apply to this Regulation.

<table>
<thead>
<tr>
<th></th>
<th>Limit values</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>CO (mg/kWh)</td>
</tr>
<tr>
<td>WHSC (CI)</td>
<td>1,500</td>
</tr>
<tr>
<td>WHTC (CI)</td>
<td>4,000</td>
</tr>
<tr>
<td>WHTC (PI)</td>
<td>4,000</td>
</tr>
</tbody>
</table>

Notes:

PI = Positive Ignition
CI = Compression Ignition

*) The admissible level of NO₂ component in the NOₓ limit value may be defined at a later stage.

**) The limit shall apply as from the dates set out in row B of Table 1 in Appendix 9 to Annex 1 to this Regulation.
CO, THC, NMHC and CH₄ do not need to be demonstrated for engines where all of the fuels used have a molar carbon to hydrogen ratio of 0 as defined in paragraph 8. of Annex 4.

Paragraph 8.3.3.3., amend to read:

"8.3.3. For diesel, ethanol (ED95), petrol, E85, hydrogen, LNG, LNG₂₀, LNG and LPG fuelled, including dual-fuel, engines, all these tests may be conducted with the applicable market fuels. However, at the manufacturer’s request, the reference fuels described in Annex 5 to this Regulation may be used. This implies tests, as described in paragraph 4. of this Regulation."

Annex 1, paragraph 3.2.2.2., amend to read:

"3.2.2.2. Heavy duty vehicles Diesel/Petrol/LPG/NG-H/NG-L/ NG-HL/Ethanol (ED95)/ Ethanol (E85) /Hydrogen (T) /Hydrogen (TD) /Hydrogen (U) /Hydrogen (UD) ¹"n

Annex 1, paragraph 3.2.17.1., amend to read:

"3.2.17.1. Fuel: LPG /NG-H/NG-L /NG-HL /Hydrogen (T) /Hydrogen (TD) /Hydrogen (U) /Hydrogen (UD) ¹"n

Addendum to Annex 2A, paragraph 1.1.5., amend to read:

"1.1.5. Category of engine: Diesel/Petrol/LPG/NG-H/NG-L/NG-HL/Ethanol (ED95)/ Ethanol (E85)/ LNG/LNG₂₀ ¹ /Hydrogen (T) /Hydrogen (TD) /Hydrogen (U) /Hydrogen (UD) ¹"

Addendum to Annex 2A, paragraph 1.4.1., amend to read:

"1.4.1. WHSC test

</tbody>
</table>

Annex 4, paragraph 5.2.3.6., amend to read:

"5.2.3.6. Fuel type

(a) Diesel;
(b) Natural gas (NG);
(c) Liquefied petroleum gas (LPG);
(d) Ethanol;
(e) Hydrogen."

Annex 4, paragraph 8., amend to read:

"8. Emission calculation

The final test result shall be rounded in one step to the number of places to the right of the decimal point indicated by the applicable emission standard plus one additional significant figure, in accordance with ASTM E 29-06B. No rounding of intermediate values leading to the final break-specific emission result is permitted.

Calculation of hydrocarbons and/or non-methane hydrocarbons is based on the following molar carbon/hydrogen/oxygen ratios (C/H/O) of the fuel:

\[ \text{CH}_{1.86}\text{O}_{0.06} \text{ for diesel (B7)} \]
CH$_{2.92}$O$_{0.46}$ for ethanol for dedicated C.I. engines (ED95),
CH$_{1.93}$O$_{0.032}$ for petrol (E10),
CH$_{2.74}$O$_{0.385}$ for ethanol (E85),
CH$_{2.525}$ for LPG (liquefied petroleum gas),
CH$_{4}$ for NG (natural gas) and biomethane,

**H$_2$ for hydrogen.**

Examples of the calculation procedures are given in Appendix 5 to this annex.

Emissions calculation on a molar basis, in accordance with Annex 7 of UN GTR No. 11 concerning the exhaust emission test protocol for Non-Road Mobile Machinery (NRMM), is permitted with the prior agreement of the Type Approval Authority.

**Annex 4, paragraph 8.1.** Amend to read:

"8.1. Dry/wet correction

If the emissions are measured on a dry basis, the measured concentration shall be converted to a wet basis according to the following equation:

\[ c_w = k_w \times c_d \] (12)

Where:

\( c_d \) is the dry concentration in ppm or per cent volume
\( k_w \) is the dry/wet correction factor (\( k_{w,a} \), \( k_{w,r} \), \( k_{w,e} \), or \( k_{w,d} \) depending on respective equation used)

If all the fuels used have a molar carbon to hydrogen ratio of 0 as defined in paragraph 8. to this annex, then the equations ...

**Annex 4, paragraph 8.1.1. Equation (15),** amend to read:

" \[ k_{w,r} = \left( \frac{1}{1 + \alpha \times 0.005 \times (c_{CO2} + c_{CO})} - k_{w1} \right) \times 1,008 \] (15)"

**Annex 4, paragraph 8.1.1., amend to read:**

"... Equations 13 and 14 are principally identical with the factor 1.008 in equations 13 and 15 being an approximation for the more accurate denominator in equation 14. **Equation 15 is not applicable, if one of the fuels used has a molar carbon to hydrogen ratio of 0 as defined in paragraph 8.**"

**Annex 4, paragraph 8.1.2., amend to read:**

"8.1.2. Diluted exhaust gas

\[ k_{w,e} = \left[ (1 - \alpha \times \frac{c_{CO2w}}{200}) - k_{w2} \right] \times 1,008 \] (18)

or

\[ k_{w,e} = \left[ \frac{(1 - k_{w2})}{1 + \alpha \times \frac{c_{CO2e}}{200}} \right] \times 1,008 \] (19)

With

\[ k_{w2} = \frac{1,608 \times \left[ H_d \times \left( \frac{1}{7} \right) + H_a \times \left( \frac{1}{17} \right) \right]}{1000 + \left[ 1,608 \times \left| H_d \times \left( \frac{1}{7} \right) + H_a \times \left( \frac{1}{17} \right) \right| \right]} \] (20)

Where:
\( \alpha \) is the molar hydrogen ration of the fuel
\( c_{\text{CO2w}} \) is the wet CO2 concentration, per cent
\( c_{\text{CO2d}} \) is the dry CO2 concentration, per cent
\( H_d \) is the diluent humidity, g water per kg dry air
\( H_r \) is the intake air humidity, g water per kg dry air
\( D \) is the dilution factor (see paragraph 8.5.2.3.2.)

**Equation (18) and (19) are not applicable if one of the fuels used has a molar carbon to hydrogen ratio of 0 as defined in paragraph 8.**

Annex 4, paragraph 8.1.3. Equation (22), amend to read:

\[
\begin{align*}
\kappa_{w3} &= \frac{1.608 \times H_d}{1000 + (1.608 \times H_d)} \\
\kappa_{w3} &= \frac{1.608 \times H_d}{1000 + (1.608 \times H_d)}
\end{align*}
\]

Annex 4, paragraph 8.4.1.1., amend to read:

"8.4.1.1. Introduction

For calculation of the emissions in the raw exhaust gas and for controlling of a partial flow dilution system, it is necessary to know the exhaust gas mass flow rate. For the determination of the exhaust mass flow rate, one of the methods described in paragraphs 8.4.1.3. to 8.4.1.8. may be used."

Annex 4, paragraph 8.4.1.2., amend to read:

"8.4.1.2. Response time

For the purpose of controlling of a partial flow dilution system, a faster response is required. For partial flow dilution systems with online control, the response time shall be ≤ 0.3 second. For partial flow dilution systems with look ahead control based on a pre-recorded test run, the response time of the exhaust flow measurement system shall be ≤ 5 seconds with a rise time of ≤ 1 second. The system response time shall be specified by the instrument manufacturer. The combined response time requirements for the exhaust gas flow and partial flow dilution system are indicated in paragraph 9.4.6.1."

Annex 4, paragraph 8.4.1.6., amend to read:

"...

With

\[
\begin{align*}
A/F_{st} &= \frac{1380 \times \left(1 + \frac{\alpha}{2} \frac{\epsilon}{\beta} + \gamma\right)}{12.011 \times \beta + 1.00794 \times \alpha + 15.9994 \times \epsilon + 14.0067 \times \delta + 32.065 \times \gamma} \\
\lambda_p &= \frac{100 \times \left(\frac{1}{2} - \frac{c_{\text{CO2d}} \times 10^{-4}}{C_{\text{H}} \times 10^{-4}}\right) \times \left(\frac{1}{2} - \frac{c_{\text{CO2d}} \times 10^{-4}}{C_{\text{H}} \times 10^{-4}}\right)}{4.764 \times \left(1 + \frac{\epsilon}{\beta} + \gamma\right) \times \left(\frac{c_{\text{CO2d}} + c_{\text{CO2d}} \times 10^{-4}}{C_{\text{H}} \times 10^{-4}}\right)} \\
\lambda_i &= \frac{100 \times \left(\frac{1}{2} - \frac{c_{\text{CO2d}} \times 10^{-4}}{C_{\text{H}} \times 10^{-4}}\right) \times \left(\frac{1}{2} - \frac{c_{\text{CO2d}} \times 10^{-4}}{C_{\text{H}} \times 10^{-4}}\right)}{4.764 \times \left(1 + \frac{\epsilon}{\beta} + \gamma\right) \times \left(\frac{c_{\text{CO2d}} + c_{\text{CO2d}} \times 10^{-4}}{C_{\text{H}} \times 10^{-4}}\right)}
\end{align*}
\]

(31, 32)
Where:

$q_{\text{maw},i}$ is the instantaneous intake air mass flow rate, kg/s

$\text{A/F}_{\text{st}}$ is the stoichiometric air to fuel ratio, kg/kg

$\beta$ is the molar carbon ratio of the fuel, with $\beta=1$ for fuels containing carbon and $\beta=0$ for fuels not containing carbon

$\lambda_i$ is the instantaneous excess air ratio

$c_{\text{CO}_2\text{d}}$ is the dry CO$_2$ concentration, per cent

$c_{\text{CO}_2\text{d}}$ is the dry CO concentration, ppm

$c_{\text{HC}_w}$ is the wet HC concentration, ppm

Equation (32) is not applicable if one of the fuels used has a molar carbon to hydrogen ratio of 0 as defined in paragraph 8.

Annex 4, paragraph 8.4.2.3. Table 5, amend to read:

"Annex 4, paragraph 8.4.2.3. Table 5, amend to read:

(Halogenate ion basis)
The hydrogen fuel index is determined by subtracting the “total non-hydrogen gases” in this table, expressed in mole per cent, from 100 mole per cent.

Total hydrocarbons except methane include oxygenated organic species.

The sum of measured CO, HCHO and HCOOH shall not exceed 0.2 µmol/mol

As a minimum, total sulphur compounds include H2S, COS, CS2 and mercaptans, which are typically found in natural gas.

Test method shall be documented. Test methods defined in ISO21087 are preferable.

The analysis of specific contaminants depending on the production process shall be exempted. A vehicle manufacturer shall provide the responsible authority reasons for exempting specific contaminants.”

Annex 6, paragraph 1.2., amend to read:

“1.2. This annex does not apply to dual-fuel engines and vehicles where all of the fuels used have a molar carbon to hydrogen ratio of 0 as defined in paragraph 8. of Annex 4.”

Annex 8, paragraph 6.2., amend to read:

“6.2. The conformity factors shall be calculated and presented for both the CO2 mass based method and the work based method. The pass/fail decision shall be made on the basis of the results of the work based method. The CO2 mass based method may be omitted, if the molar carbon to hydrogen ratio of at least one of the fuels used is 0 as defined in paragraph 8. of Annex 4.”

Annex 8, paragraph 10.1.11., amend to read:

“10.1.11. Type of engine: petrol, ethanol (E85), diesel/NG /LPG /ethanol (ED95) /hydrogen (Delete as appropriate)”

Annex 8, paragraph 10.1.5.1., amend to read:

“10.1.5.1. Engine fuel type (e.g. diesel, ethanol ED95, NG, LPG, petrol, E85, hydrogen)”

Annex 8, paragraph 10.1.8.1., amend to read:

“10.1.8.1. THC concentration [ppm] for engines where one of the fuels used has a molar carbon to hydrogen ratio greater than 0 as defined in paragraph 8. of Annex 4.”

Annex 8, paragraph 10.1.8.2., amend to read:

“10.1.8.2. CO concentration [ppm] for engines where one of the fuels used has a molar carbon to hydrogen ratio greater than 0 as defined in paragraph 8. of Annex 4.”

Annex 8, paragraph 10.1.8.4., amend to read:

“10.1.8.4. CO2 concentration [ppm] for engines where one of the fuels used has a molar carbon to hydrogen ratio greater than 0 as defined in paragraph 8. of Annex 4.”

Annex 8, paragraph 10.1.9.1., amend to read:

“10.1.9.1. THC mass [g/s] for engines where one of the fuels used has a molar carbon to hydrogen ratio greater than 0 as defined in paragraph 8. of Annex 4.”

Annex 8, paragraph 10.1.9.2., amend to read:

“10.1.9.2. CO mass [g/s] for engines where one of the fuels used has a molar carbon to hydrogen ratio greater than 0 as defined in paragraph 8. of Annex 4.”

Annex 8, paragraph 10.1.9.4., amend to read:

“10.1.9.4. CO2 mass [g/s] for engines where one of the fuels used has a molar carbon to hydrogen ratio greater than 0 as defined in paragraph 8. of Annex 4.”
"10.1.9.5.  \( \text{CH}_4 \) mass [g/s] for \( P.I. \) natural-gas fuelled engines only"

Annex 8, paragraph 10.1.9.6., amend to read:

"10.1.9.6.  THC cumulated mass [g] for engines where one of the fuels used has a molar carbon to hydrogen ratio greater than 0 as defined in paragraph 8. of Annex 4."

Annex 8, paragraph 10.1.9.7., amend to read:

"10.1.9.7.  CO cumulated mass [g] for engines where one of the fuels used has a molar carbon to hydrogen ratio greater than 0 as defined in paragraph 8. of Annex 4."

Annex 8, paragraph 10.1.9.9., amend to read:

"10.1.9.9.  \( \text{CO}_2 \) cumulated mass [g] for engines where one of the fuels used has a molar carbon to hydrogen ratio greater than 0 as defined in paragraph 8. of Annex 4."

Annex 8, paragraph 10.1.9.16., amend to read:

"10.1.9.16.  Work window THC conformity factor [-] for engines where one of the fuels used has a molar carbon to hydrogen ratio greater than 0 as defined in paragraph 8. of Annex 4."

Annex 8, paragraph 10.1.9.17., amend to read:

"10.1.9.17.  Work window CO conformity factor [-] for engines where one of the fuels used has a molar carbon to hydrogen ratio greater than 0 as defined in paragraph 8. of Annex 4."

Annex 8, paragraph 10.1.9.20., amend to read:

"10.1.9.20.  \( \text{CO}_2 \) mass window duration [s] for engines where none of the fuels used has a molar carbon to hydrogen ratio of 0 as defined in paragraph 8. of Annex 4."

Annex 8, paragraph 10.1.9.21., amend to read:

"10.1.9.21.  \( \text{CO}_2 \) mass window THC conformity factor [-] for engines where none of the fuels used has a molar carbon to hydrogen ratio of 0 as defined in paragraph 8. of Annex 4."

Annex 8, paragraph 10.1.9.22., amend to read:

"10.1.9.22.  \( \text{CO}_2 \) mass window CO conformity factor [-] for engines where none of the fuels used has a molar carbon to hydrogen ratio of 0 as defined in paragraph 8. of Annex 4."

Annex 8, paragraph 10.1.9.23., amend to read:

"10.1.9.23.  \( \text{CO}_2 \) mass window NOx conformity factor [-] for engines where none of the fuels used has a molar carbon to hydrogen ratio of 0 as defined in paragraph 8. of Annex 4."

Annex 8, paragraph 10.1.9.24a., amend to read:

"10.1.9.24a.  \( \text{CO}_2 \) mass window PM number conformity factor [-] for engines where none of the fuels used has a molar carbon to hydrogen ratio of 0 as defined in paragraph 8. of Annex 4."

Annex 8, paragraph 10.1.10.8., amend to read:

"10.1.10.8.  THC emissions [g] for engines where one of the fuels used has a molar carbon to hydrogen ratio greater than 0 as defined in paragraph 8. of Annex 4."

Annex 8, paragraph 10.1.10.9., amend to read:
"10.1.10.9. CO emissions [g] for engines where one of the fuels used has a molar carbon to hydrogen ratio greater than 0 as defined in paragraph 8. of Annex 4."

Annex 8, paragraph 10.1.10.11., amend to read:

"10.1.10.11. CO₂ emissions [g] for engines where one of the fuels used has a molar carbon to hydrogen ratio greater than 0 as defined in paragraph 8. of Annex 4."

Annex 8, paragraph 10.1.11.2., amend to read:

"10.1.11.2. Work window THC conformity factor [-] for engines where one of the fuels used has a molar carbon to hydrogen ratio greater than 0 as defined in paragraph 8. of Annex 4."

Annex 8, paragraph 10.1.11.3., amend to read:

"10.1.11.3. Work window CO conformity factor [-] for engines where one of the fuels used has a molar carbon to hydrogen ratio greater than 0 as defined in paragraph 8. of Annex 4."

Annex 8, paragraph 10.1.11.6., amend to read:

"10.1.11.6. CO₂ mass window THC conformity factor [-] for engines where none of the fuels used has a molar carbon to hydrogen ratio of 0 as defined in paragraph 8. of Annex 4."

Annex 8, paragraph 10.1.11.7., amend to read:

"10.1.11.7. CO₂ mass window NOₓ conformity factor [-] for engines where none of the fuels used has a molar carbon to hydrogen ratio of 0 as defined in paragraph 8. of Annex 4."

Annex 8, paragraph 10.1.11.8., amend to read:

"10.1.11.8. Work window CO conformity factor [-] for engines where one of the fuels used has a molar carbon to hydrogen ratio greater than 0 as defined in paragraph 8. of Annex 4."

Annex 8, paragraph 10.1.11.11., amend to read:

"10.1.11.11. CO₂ mass window: Minimum and maximum window duration [s] for engines where none of the fuels used has a molar carbon to hydrogen ratio of 0 as defined in paragraph 8. of Annex 4."

Annex 8, paragraph 10.1.11.13., amend to read:

"10.1.11.13. CO₂ mass window: Percentage of valid windows for engines for engines where none of the fuels used has a molar carbon to hydrogen ratio of 0 as defined in paragraph 8. of Annex 4."

Annex 8, paragraph 10.1.12.1., amend to read:

"10.1.12.1. THC analyser zero, span and audit results, pre and post test for engines where one of the fuels used has a molar carbon to hydrogen ratio greater than 0 as defined in paragraph 8. of Annex 4."

Annex 8, paragraph 10.1.12.2., amend to read:

"10.1.12.2. CO analyser zero, span and audit results, pre and post test for engines where one of the fuels used has a molar carbon to hydrogen ratio greater than 0 as defined in paragraph 8. of Annex 4."

Annex 8, paragraph 10.1.12.4., amend to read:

"10.1.12.4. CO₂ analyser zero, span and audit results, pre and post test for engines where one of the fuels used has a molar carbon to hydrogen ratio greater than 0 as defined in paragraph 8. of Annex 4."

Annex 8, Appendix 1, paragraph A.1.1., amend to read:
"A.1.1. Introduction

This Appendix describes the procedure to determine pollutant emissions from on-vehicle on-road measurements using Portable Emissions Measurement Systems (hereinafter “PEMS”). The pollutant emissions to be measured from the exhaust of the engine include the following components: carbon monoxide, total hydrocarbons, nitrogen oxides and PM number for compression ignition engines and carbon monoxide, non-methane hydrocarbons, methane, nitrogen oxides and PM number for positive ignition engines. Additionally, carbon dioxide shall be measured to enable the calculation procedures described in paragraph A.1.4.

For engines fuelled with natural gas, the manufacturer, technical service or Type Approval Authority may choose to measure the total hydrocarbon (THC) emissions only instead of measuring the methane and non-methane hydrocarbon emissions. In that case, the emission limit for the total hydrocarbon emissions is the same as the one shown in paragraph 5.3. of this Regulation for methane emissions. For the purposes of the calculation of the conformity factors pursuant to paragraphs A.1.4.2.3. and A.1.4.3.2., the applicable limit shall in that case be the methane emission limit only.

For engines fuelled with gases other than natural gas, the manufacturer, technical service or Type Approval Authority may choose to measure the total hydrocarbon (THC) emissions instead of measuring the non-methane hydrocarbon emissions. In that case, the emission limit for the total hydrocarbon emissions is the same as shown in paragraph 5.3. of this Regulation for non-methane hydrocarbon emissions. For the purposes of the calculations of the conformity factors pursuant to paragraphs A.1.4.2.3. and A.1.4.3.2., the applicable limit shall in that case be the non-methane emission limit.

For engines where all the fuels used have a molar carbon to hydrogen ratio of 0 as defined in paragraph 8. of Annex 4, the manufacturer may choose to measure only nitrogen oxides and PM number. In this case lambda and optionally air mass flow shall be measured as well to enable the data consistency check as described in paragraph A.1.3.2.

Table 1 in Annex 8, Appendix 1, paragraph A.1.2.2., amend to read:

Three-way catalyst

The OBD system shall monitor the three-way catalyst on engines so-equipped for proper operation:
Annex 10, paragraph 5.2.2., amend to read:

"5.2.2. The applicable emission limits shall be the following:
   (a) For CO: 2,000 mg/kWh;
   (b) For THC: 220 mg/kWh;
   (c) For NOx: 600 mg/kWh;
   (d) For PM: 16 mg/kWh.

1 the measurement shall not be required if the molar carbon to hydrogen ratio of all the fuels used is 0 as defined in paragraph 8. of Annex 4."

Annex 12, paragraph 3.1., amend to read:

"3.1. Raw measurement
This paragraph shall apply, if CO₂ is measured in the raw exhaust gas and the molar carbon to hydrogen ratio of all the fuels used is greater than 0 as defined in paragraph 8. of Annex 4."

Annex 12, paragraph 3.2., amend to read:

"3.2. Dilute measurement
This paragraph shall apply, if CO₂ is measured in the dilute exhaust gas and the molar carbon to hydrogen ratio of all the fuels used is greater than 0 as defined in paragraph 8. of Annex 4."

Annex 12, insert new paragraph 3.3., to read:

"3.3. Calculation from fuel consumption
This paragraph shall apply, if the molar carbon to hydrogen ratio of the all the fuels used is 0 as defined in paragraph 8. of Annex 4.

The fuel consumption shall be determined according to paragraph 4. of this annex and the measured test-averaged fuel consumption shall be used as the base for calculating the test averaged CO₂ emissions.

The mass of CO₂ (g/test) shall be set to zero according to the following equation:

$$m_{CO_2} = \frac{\beta \times M_{CO_2}}{\beta \times A_C + \alpha \times A_H} \times q_{mf}$$"

Annex 12, paragraph 3.3. (former), renumber as paragraph 3.4.

Annex 12, Appendix 1, paragraph A.1.2.1.2., amend to read:

"A.1.2.1.2. Paragraph 5.2.4. of Regulation No.101 shall be understood as follows:

(1) Density: measured on the test fuel according to ISO 3675 or an equivalent method. For petrol, diesel, ethanol (E85) and ethanol for dedicated C.I. engines (ED95) the density measured at 288 K (15 °C) will be used; for LPG and natural gas/biomethane a reference density shall be used, as follows:

0.538 kg/litre for LPG;
0.654 kg/m³ for NG.

(2) Hydrogen-carbon-oxygen ratio: fixed values shall be used which are:

- C₂H₅O₀.₃₅₂ for petrol (E10);
- CH₄ for diesel (B7);
- C₁H₂.₅₂₅ for LPG (liquefied petroleum gas);
- CH₄ for NG (natural gas) and biomethane;
- C₁H₂.₇₄O₀.₃₈₅ for ethanol (E85);
- C₁H₂.₉₂O₀.₆₆ for ethanol for dedicated C.I. engines (ED95);
- H₂ for hydrogen.

Annex 12, Appendix 1, paragraph A.1.2.1.2., amend to read:

"A.1.2.1.3. Paragraph 1.4.3. of Annex 6. of Regulation No. 101 shall be understood as:

1.4.3. The fuel consumption, expressed in litres per 100 km (in the case of petrol, LPG, ethanol (E85 and ED95) and diesel) or in m³ per 100 km (in the case of NG/biomethane) is calculated by means of the following formulae:

(a) For vehicles with a positive ignition engine fuelled with petrol (E10):

\[ FC = (0.120/D) \cdot [(0.831 \cdot HC) + (0.429 \cdot CO) + (0.273 \cdot CO₂)] \]

(b) For vehicles with a positive ignition engine fuelled with LPG:

\[ FC_{norm} = (0.1212/0.538) \cdot [(0.825 \cdot HC) + (0.429 \cdot CO) + (0.273 \cdot CO₂)] \]

If the composition of the fuel used for the test differs from the composition that is assumed for the calculation of the normalised consumption, on the manufacturer’s request a correction factor cf may be applied, as follows:

\[ FC_{norm} = (0.1212/0.538) \cdot (cf) \cdot [(0.825 \cdot HC) + (0.429 \cdot CO) + (0.273 \cdot CO₂)] \]

The correction factor cf, which may be applied, is determined as follows:

\[ cf = 0.825 + 0.0693 \cdot n_{actual} \]

Where:

\[ n_{actual} \] is the actual H/C ratio of the fuel used

(c) For vehicles with a positive ignition engine fuelled with NG/biomethane:

\[ FC_{norm} = (0.1336/0.654) \cdot [(0.749 \cdot HC) + (0.429 \cdot CO) + (0.273 \cdot CO₂)] \]

(d) For vehicles with a positive ignition engine fuelled with ethanol (E85):

\[ FC = (0.1742/D) \cdot [(0.574 \cdot HC) + (0.429 \cdot CO) + (0.273 \cdot CO₂)] \]

(e) For vehicles with a compression ignition engine fuelled with diesel (B7):

\[ FC = (0.1165/D) \cdot [(0.859 \cdot HC) + (0.429 \cdot CO) + (0.273 \cdot CO₂)] \]

(f) For vehicles with a dedicated compression ignition engine fuelled with ethanol (ED95)

\[ FC = (0.186/D) \cdot [(0.538 \cdot HC) + (0.429 \cdot CO) + (0.273 \cdot CO₂)] \]

(g) For vehicles fuelled by gaseous hydrogen:

\[ FC = 0.024 \cdot \frac{\sqrt{\frac{1}{\frac{p_1}{T_1} - \frac{1}{T_2}}}}{\frac{p_2}{T_2}} \]
Under previous agreement with the type-approval authority, and for vehicles fuelled either by gaseous or liquid hydrogen, the manufacturer may choose as alternative to the method above, or a method according to standard protocols such as SAE J2572 or ISO 23828.

In these formulae:

- **FC** is the fuel consumption in litre per 100 km (in the case of petrol, ethanol, LPG, diesel or biodiesel) or in m³ per 100 km (in the case of natural gas)
- **HC** is the measured emission of hydrocarbons in g/km
- **CO** is the measured emission of carbon monoxide in g/km
- **CO₂** is the measured emission of carbon dioxide in g/km
- **D** is the density of the test fuel. In the case of gaseous fuels this is the density at 288 K (15 °C).
- **d** is the theoretical length of the applicable phase or cycle, in km
- **p₁** is the pressure in gaseous fuel tank before the operating cycle in Pa
- **p₂** is the pressure in gaseous fuel tank after the operating cycle in Pa
- **T₁** is the temperature in gaseous fuel tank before the operating cycle in K
- **T₂** is the temperature in gaseous fuel tank after the operating cycle in K
- **Z₁** is the compressibility factor of the gaseous fuel at p₁ and T₁
- **Z₂** is the compressibility factor of the gaseous fuel at p₂ and T₂
- **V** is the inner volume of the gaseous fuel tank in m³

### II. Justification

1. Hydrogen fuelled vehicles are covered in UN Regulation No. 83 and UN Regulation No. 154 (LD regulation), but hydrogen fuelled engines are not yet covered in UN Regulation No. 49 and UN Regulation No. 85

2. Hydrogen fuelled engines could be one complementary option to reduce CO₂ emission of future heavy duty vehicles

3. Thus hydrogen fuel should be integrated in UN Regulation No. 49 and UN Regulation No. 85 for better alignment with UN Regulation No. 83 and UN Regulation No. 154

To mark the proposed amendments to the existing text of the UN Regulations, UN Global Technical Regulations (UN GTRs) and UN Rules, the proposals for consideration by the GRs can be prepared either on track change mode or using bold text (for the additions) and strikethrough (for the deleted text).
