

National Policy Guiding Principles for Forest Landscape Restoration

23-24 June 2022, Bishkek, Kyrgyzstan

Rationale for the National Policy Guiding Principles?

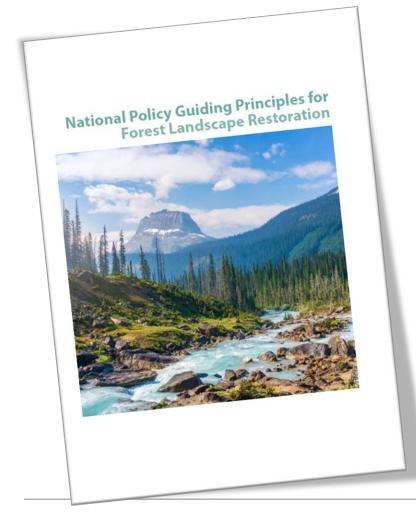

- Numbers of trainings and tools available (about 9 guidelines and best practices)
- However, conservation, afforestation, and reforestation activities have been carried out for many years, but with mixed results

Rationale for the National Policy Guiding Principles?

Lesson learned: what is needed in addition, is an integrated approach that takes into account capacity and needs of all main stakeholders

FLR requires effective policy frameworks to meet international commitments

Governance checklist – what, for whom?

- Guides policy-makers in FLR implementation based on decades of experiences in forestry and FLR
- 7 guiding principles and 8 crosscutting principles
- Tailored for CCA countries but globally applicable
- Available in English and Russian

Governance checklist – 7 guiding principles

DEPARTMENT NAME | DATE: ROBOTO, 12 PT

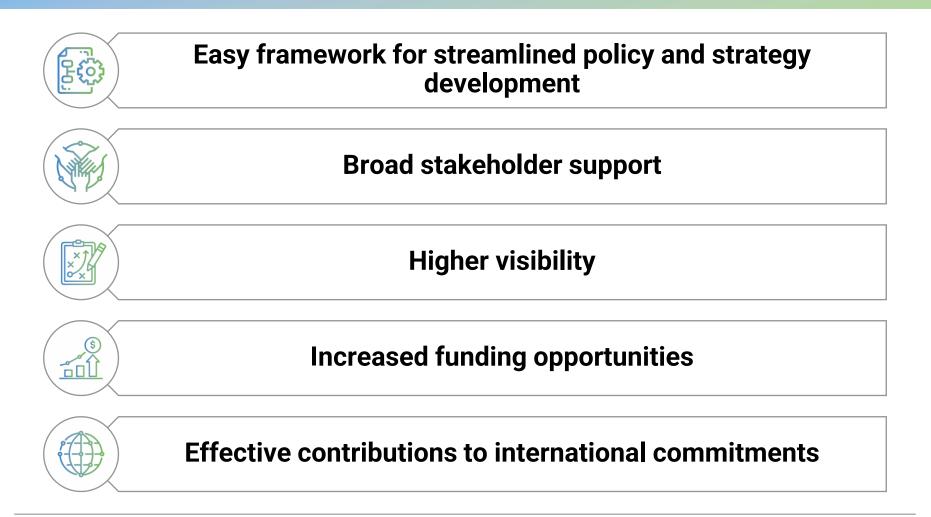

Governance checklist – 8 cross-cutting principles

Governance checklist – the benefits

Principle - Development of a national FLR strategy

THROUGH:

- Stakeholder analysis
- Identification of root causes of forest landscape degradation
- SWOT analysis to identify internal and external working environment of forest administration
- Identification of social, economic and political problems and needs that forest administration should respond to
- Drafting mission statement, including short, mediumand long-term actions
- Identifying strategic issues
- Formulating strategies (5 years timeframe)
- Formulating immediate actions (2 years timeframe)
- Formulating a vision of success

Principle - Implementation strategies for effective FLR

- Protect and restore what exists
- Restore forest landscape through planting, nature-based regeneration and other technical measures
- Greening other non-forest sectors in support of FLR:
 - Greening agriculture by alleviating drivers of forest landscape degradation resulting from agricultural practices
 - Greening infrastructures
 investments
 - Greening urban and peri-urban centres

Creating real, lasting sustainable Impact:

National Policy Guiding Principles – pave the way for **meaningful and sustainable FLR interventions**:

Involve all relevant stakeholders in the process

- Create effective synergies (sometimes between conflicting objectives and measures) to achieve common FLR goals
- Support the design of lasting FLR interventions learning from past mistakes, developing sustainable common new ways forward and tapping into funding opportunities

To make FLR a main contributor to sustainable livelihood and to mitigating climate change

THANK YOU

Dominique Reeb Consultant UNECE/FAO Forestry and Timber Section United Nations Economic Commission for Europe
