# Automated Driving Road Map

## Main messages from GRVA-13-18

June 2022

## Main messages

- Industry is getting closer to market introduction of ADS, for some use-cases manufacturers are already waiting for the regulatory environment to be available
  - **need for legal certainty to support automated driving deployment.**
- A number national/regional activities are initiated to address certification of ADS. While this opens opportunities to put systems on the market and gain experience (both for industry and Authorities), it potentially increases the risk of dis-harmonisation.
  - **need to prepare the next step towards an agreed target.**
