

ModernStats World Workshop 202227-29 June 2022, Belgrade, Serbia

GSBPM Implementation: Experience from the IMFMarco Marini, International Monetary Fund (IMF), MMarini@imf.org**Abstract**

In 2021, the IMF Statistics Department began modernizing its statistical business processes to manage its operations to collect, process, and re-disseminate official statistics of its member countries. This presentation highlights how the Generic Statistical Business Process Model (GSBPM) was used and adapted to fit the set of business processes and sub-processes managed by the department. It describes the steps taken to introduce the model, from initial process mapping of existing processes to the adoption of standardized processes and the delineation of responsibility across the different phases of the GSBPM. Finally, it showcases how the GSBPM framework is being used by the department to prioritize and planning its resources between competing projects. The experience from the IMF can be useful for other international organizations that are interested in using the GSBPM as a standard framework to improve and maintain quality and efficiency of their statistical production processes.
