Expectancy  
Surveys

In line with  
Regular  
Surveys

**Rapid Surveys**

Results used  
for GDP  
Forecast

The main goal of the Rapid Survey System is to assess and predict the movement of the main economic indicators for the month ahead, where companies make their own predictions, given that they know best the situation in their field of work.

# Rapid Surveys System

01

Monthly assessment of industrial capacity engagement in industry in the Republic of Serbia

02

Monthly assessment of the implementation of the construction activity plan in the Republic of Serbia

03

Monthly assessment of wholesale and retail trade turnover index in the Republic of Serbia

04

Expected trends in the current month in the areas of professional, scientific, technical, administrative and other ancillary services in the Republic of Serbia

# Rapid Surveys System

System for developing web questionnaires

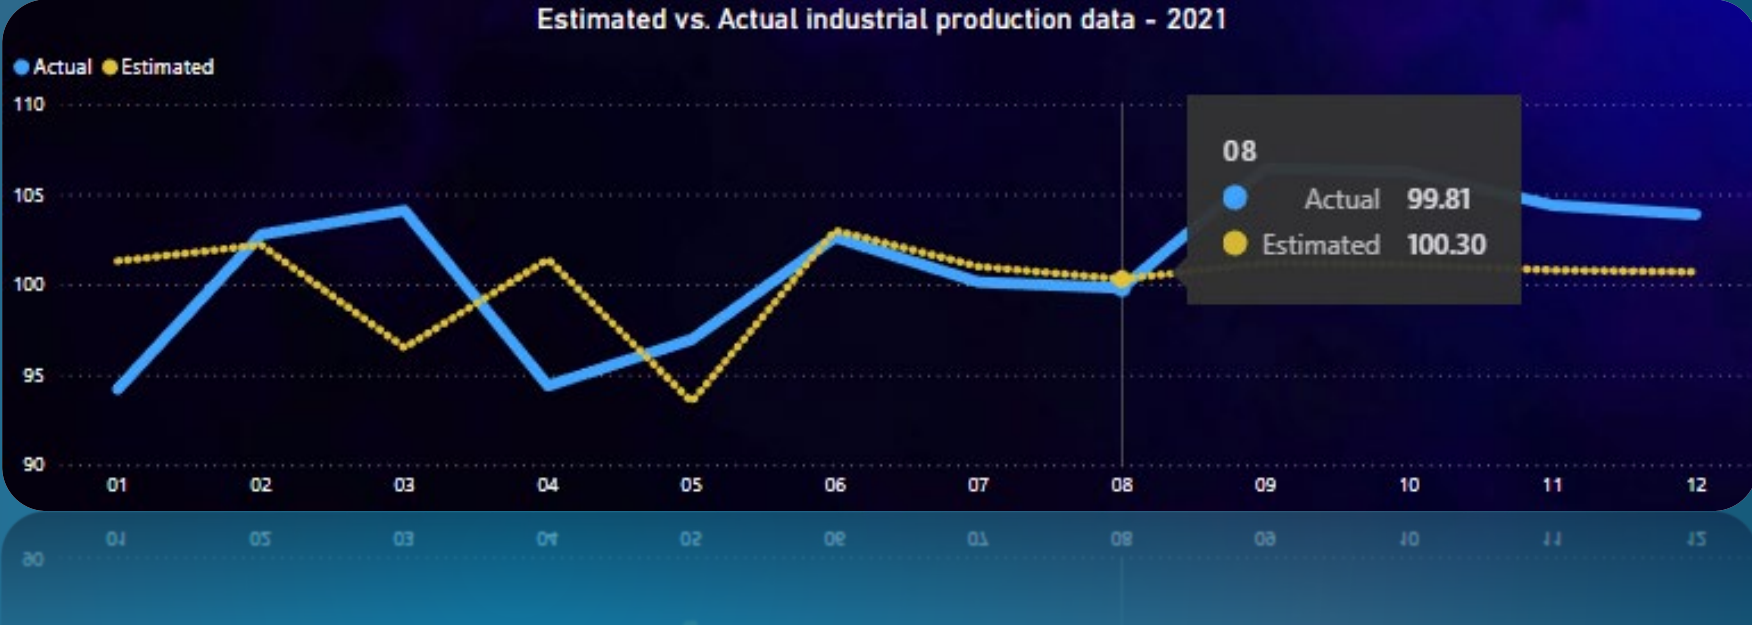

Monitoring survey activities in the real-time.

Automatically building interactive results report.

Updating government and policy makers with most relevant information

# Conclusions, lessons learned

Maintain direct and interactive communication with respondents.

Minimize the time for publishing results.

Explore possibilities of introducing new but less complex surveys.

Official statistics should be a key player in decision making support process.
