Global Set of Climate Change Statistics and Indicators

UNECE Expert Forum for Producers and Users of Climate Change-Related Statistics 29-30 September 2022, Geneva, Switzerland (hybrid), Palais des Nations

Outline

- 1. Background and process
- 2. Overview of the Global Set
- 3. Implementation support
- 4. Current and future work
- 5. Concluding remarks

Overview of the Global Set

The need for monitoring climate change and disasters is more compelling than ever

NOAA, Global Monitoring Laboratory - Carbon Cycle Greenhouse Gases (noaa.gov)

NOAA, https://www.climate.gov/disasters2020

AR6 Climate Change 2021: The Physical Science Basis — IPCC

b) Change in global surface temperature (annual average) as **observed** and simulated using <a href="https://human.com/human.co

SIXTH ASSESSMENT REPORT

Working Group I – The Physical Science Basis

INTERCOVERMENTAL PAREL ON Ollmate chance

OF THE PHYSICAL SCIENCE BASIS

INTERCOVERMENTAL PAREL ON Ollmate chance

Human activities affect all the major climate system components, Figure SPM.8 with some responding over decades and others over centuries

More than a decade long process: 2008 - present

Decisions of the Statistical Commission:

official stats

(Oslo

Seoul)

and

Decision 47/112 (2016), UNSD requested to develop a global set of climate change statistics and indicators, applicable to countries at various stages of development:

http://unstats.un.org/unsd/statcom/47th-session/documents/Report-on-the-47th-session-of-the-statistical-commission-E.pdf

Decision: 49/113 (2018), UNSD and UNFCCC to strengthen the link between statistics and policy https://unstats.un.org/unsd/statcom/49th-session/documents/Report-on-the-49th-session-E.pdf
Decision 53/116 (2022), the Global Set was adopted at the 53rd session of the Statistical Commission: https://unstats.un.org/unsd/statcom/53rd-session/documents/2022-41-FinalReport-E.pdf

Process and approach

Draft Set of Indicators and Statistics

bottom-up approach reviewing 130 countries,

Pilot survey (2020)

42 countries and 30 international/regional organizations responded

Global consultation (2021)

86 countries (68 on part and 75 on part 2) and 26 organizations responded

Adoption of the Global Set (2022)

(5 areas, 34 topics, 158 indicators and 190 statistics)

Implementation guidelines and climate-ESSAT

(in progress)

- Regional representation
- approx. 7,500 individual indicators/statistics; analysed;
- most commonly repeated indicators identified.

Pivotal
In bringing
together NSO
and Climate
authorities

53rd Statistical
Commission
adopted Global
Set as the
Framework for
Climate Change
Statistics and
Indicators

Expert Group on Environment Statistics (EGES)

Bilateral consultations with specialized agencies on thematic areas

Ongoing consultations with countries to obtain inputs/feedback on process/outputs

Methodological foundation

- Given that there was no underlying framework linking the reporting requirements stemming from the Paris Agreement and the necessary statistics or indicators to support climate policy action, UNSD worked closely with UNFCCC to develop such a framework explicitly for climate change.
- The Global Set, developed in close collaboration with UNFCCC, is structured
 according to the IPCC framework and FDES, with a tiering system as in the FDES
 and the SDG indicators.

IPCC, 2007, Fourth Assessment Report

Framework for the Development of Environment Statistics (FDES 2013)

Relevant chapters of the Manual of the BSES
https://unstats.un.org/unsd/envstats
/fdes/manual_bses.cshtml

FDES cross-cutting application (Chapter 5) links climate change and environment statistics based on the IPCC Framework

Goal 13

Main structure (1)

- 158 indicators, which serve to support developing and monitoring of national climate policies and international reporting requirements, in particular those under the Paris Agreement.
- 190 statistics, which serve three main purposes:
 - (i) to provide less complex options for countries with less developed statistical systems to initiate climate monitoring through official statistics;
 - (ii) to provide statistics needed to compile the indicators (for Tier 1 and 2); and
 - (iii) to provide inputs to further define and develop the Tier 3 indicators.

Statistics were not introduced for indicators for which:

- (i) indicator and statistic are identical (9 cases, denoted with 'Equivalent to the indicator' in the metadata sheets); and
- (ii) indicators for which the statistics and their metadata are fully described within the cited methodology source, e.g. often from SDG and Sendai Framework indicators (21 cases, denoted with 'Refer to original source in metadata' in the metadata sheets).

Main structure (2)

- Five areas: drivers, impacts, vulnerability, mitigation and adaptation.
 These events are applied as five top-level areas in the Global Set. Each
 indicator is assigned to one of the five IPCC areas as a primary belonging,
 while some indicators were also assigned as applicable in one or more
 additional areas;
- 34 topics, represent the quantifiable aspects of the areas taking into account the types and sources of the statistics needed to describe them;
- Paris Agreement article: Correspondence between the indicator/statistic and the articles in the Paris Agreement specifying the reporting requirements;
- PAWP-Katowice: Correspondence between the indicator/statistic and the decisions from the Paris Agreement Work Programme (PAWP), adopted in Katowice, specifying the reporting requirements;
- Statistical references (next slide).

Statistical references

The main statistical references including the internationally accepted frameworks, standards and guidelines, are presented in abbreviated form in the last column (entitled Method):

- IPCC: the Intergovernmental Panel on Climate Change 2006 guidelines;
- FDES: the Framework for the Development of Environment Statistics and its Manual on the Basic Set of Environment Statistics (BSES);
- SDG: Sustainable Development Goal indicators metadata;
- Sendai: Sendai Framework for Disaster Risk Reduction 2015-2030;
- UN-ECE: the Conference of European Statisticians set of core climate change-related indicators metadata;
- IRES: the International Recommendations for Energy Statistics
- SEEA-CF: the System of Environmental-Economic Accounting Central Framework;
- SEEA-EA: the System of Environmental-Economic Accounting-Ecosystem Accounting.

Tiers

Defined by considering the relevance (to climate change), methodological soundness and data availability. The relevance or connection to climate change varies per indicator, however a certain relation to climate change has been identified for all the indicators included in the Global Set:

- Tier 1 are relevant, methodologically sound, and for which more than 50 per cent of the countries that responded to the Global Consultation indicated that data are available. However, this rule was not applied for the SDG indicators included in the Global Set and the original SDG indicator Tiers are used;
- Tier 2 are relevant, methodologically sound, and for which less than 50 per cent of the countries that responded to the Global Consultation indicated that country data are available. Again, the rule was not applied for the SDG indicators;
- Tier 3 are relevant, but not methodologically sound, and country data may not be available.

SDG											
Sendai Framework											
Tier	2	1	2	2							
Definition	The indicator measures the renewable freshwater resources divided by the population of the country. Renewable freshwater resources = Internal flow + Inflow of surface and groundwaters from neighbouring countries. Renewable freshwater (surface and groundwater) resources are replenished by precipitation (less evapotranspiration) falling over the territory of the country that ends up as runoff to rivers and recharge to aquifers (internal flow), and by surface waters and groundwater flowing in from	Total volume of atmospheric wet precipitation (rain, snow, hail, dew, etc.) falling on the territory of the country over one year, in millions of cubic metres. [UNSD/UNEP Questionnaire, https://unstats.un.org/unsd/envstats/Questionnaires/2020/q2020 Water English.pdf] [FDES BSES manual, Water resources, p.11, https://unstats.un.org/unsd/environment/FDES/MS%202.6%20Water%20Resources.pdf]	Actual evapotranspiration: Total actual volume of evaporation from the ground, wetlands and natural water bodies and transpiration of plants. According to the definition of this concept in Hydrology, the evapotranspiration generated by all human interventions is excluded, except unirrigated agriculture and forestry. The 'actual evapotranspiration' is calculated using different types of mathematical models, ranging from very simple algorithms (Budyko, Turn Pyke, etc.) to schemes that represent the hydrological cycle in detail.	Total volume of river run-off and groundwater generated over the period of a year, in natural conditions, exclusively by precipitation into a country. The internal flow is equal to precipitation less actual evapotranspiration and can be calculated or measured. If the river and groundwater generation are measured separately, transfers between surface and groundwater should be

The Global Set, in summary

- The Global Set of Climate Change Statistics and Indicators is a comprehensive statistical framework, with statistics, indicators and metadata, designed to support countries in preparing their own sets of climate change statistics and indicators according to their individual concerns, priorities and resources;
- It will assist countries embarking on the development of climate change statistics programmes by providing the scope and coverage as to what may be considered relevant to climate change;
- It can also assist countries already involved in this area of statistics by providing a reference list;
- It will help to streamline the supply of data for national policies and international reporting by mapping the commonalities, overlaps and gaps under multiple policy demands and statistical methods/guidelines.

Implementation support

Access and implementation support for the Global Set

- The Global Set is introduced and briefly described in the <u>Report of the Secretary-General on Climate Change Statistics to the Statistical Commission (E/CN.3/2022/17)</u> available in the six UN languages: https://unstats.un.org/unsd/envstats/climatechange docs conf.cshtml
- The full description of the Global Set and its metadata is included in the Background document to the Report of the Secretary-General on Climate Change Statistics, entitled <u>Global Set and metadata</u>.
- Implementation support materials including a self-assessment tool and elearning materials will be disseminated via UNSD website: https://unstats.un.org/unsd/envstats/climatechange.cshtml
- In addition, if implementation advice and support are required (including the indicators and statistics in a spreadsheet form – Excel file) please contact UNSD at: envstats@un.org

Implementation steps

Conduct a self-assessment

NSOs in collaboration with climate reporting authorities prioritize the nationally relevant indicators and statistics

Establish/expand/strengthen committee/ working group

with relevant stakeholders

Define and prioritize gaps in data and methods

Collect data and compile statistics and indicators

Reporting

Contribute to national policy demands and international reporting requirements

Disseminate

Disseminate national climate change statistics and indicators as a public good

Using tools developed e.g. Climate ESSAT (in progress)

Promotes
strengthening of
relationship between
NSOs and national
climate reporting
authorities

- Conduct specialised surveys on Climate Change Statistics e.g. Nepal
- Add questions/Options /section/ module on environment/climate change to PHC questionnaire e.g. Grenada, Tanzania 2020 round.
- https://unstats.un.org/unsd/
 envstats/

Jamaica and Tanzania - first 2 NSOs in the world to published Climate Change statistics reports.

Draft Implementation Guidelines

(under development)

Contents

- Description of the Global Set
- Key issues of climate change
- Self-assessment
- Mobilizing resources
- Establish a committee/working group with relevant stakeholders
- Training and capacity building at national level
- Map sources of available indicators/statistics and assess them in terms of quality and utility
- Define and prioritize gaps in data and methods
- Establish data collection processes
- Disseminate national climate change statistics and indicators
- Evaluate contribution to national policy demands and international reporting requirements

Draft Self-Assessment Tool

(based on the Global Consultation, under development)

- Assessment guidance: short introduction and guidance for completing the self-assessment;
- Part I: Institutional Dimension of Climate Change Statistics and Indicators: aims at collecting general information on the institutional dimensions of climate change statistics;
- Part II: Assessment of Climate Change Statistics and Indicators: each individual indicator and statistic can be assessed in terms of relevance, methodological soundness and data availability.

Part II template:

							al Climate		Stati	istical Re	ference			
		Global Set (adopte	ed in March 2022)			Policy	Reference	Method		Global		Regional	Focal Instituti sour

The first three blocks, i.e. the Global Set, the Global Climate Policy References and Statistical References, present the information and references also contained in the metadata (https://unstats.un.org/unsd/statcom/53rd-session/documents/BG-3m-Globalsetandmetadata-E.pdf) therefore these are not meant for users to fill in. The users should fill in the cells in the block called Self-Assessment. The following definitions apply:

Global Set

[column B] Area: A schematic framework developed by the IPCC summarises the complexity of climate change as a sequence of events: drivers, impacts, vulnerability, <u>mitigation</u> and adaptation. These events are applied as five top-level areas in the Global Set. Each indicator is assigned to one of the five IPCC areas as a primary belonging, while some indicators were also assigned as applicable in one or more additional areas.

[column C] **Topic**: As in the FDES (p. 3), the statistical topics represent the quantifiable aspects of the areas <u>taking into account</u> the types and sources of the statistics needed to describe them.

[column D] Number: Each indicator is numbered from 1 to 158.

Questions structured in separate blocks in an Excel spreadsheet.

[column E] Indicator: As in the FDES (p. 7), environmental indicators are used to synthesize and present

Relevant examples and resources

- Reports and compendia on:
 - environment statistics: <u>https://unstats.un.org/unsd/envstats/fdescompendia.cshtml</u> and
 - climate change statistics: https://unstats.un.org/unsd/envstats/climatechange reports.cshtml
- Outcomes of the Global Consultation, responses and feedback were received from 86 States and areas and 26 agencies (see annex I in the Report of the Secretary-General on Climate Change Statistics to the Statistical Commission (E/CN.3/2022/17)). Detailed summaries and geographical analysis are presented in the background document entitled "Global Consultation on the Global Set".
- Other relevant resources are comprehensively reviewed in the above background report
- UNFCCC Operationalization of the Enhanced Transparency Framework: https://unfccc.int/enhanced-transparency-framework

Growing engagement of countries

Global Consultation (May-Sept 2021) – 86 countries (68 on part 1 and 75 part 2) and 26 organizations

- The engagement is wider than that, e.g. 14 member states acknowledged.
- UNSD funded consultancies helped 2 more countries to do the assessment, another 9 countries to improve their earlier assessments in Africa
- Ongoing regional initiatives are also strengthening climate change statistics in countries

"Acknowledged" means that the national statistical offices of the countries (to whom we sent out the invitations to participate) communicated with us regarding the Global Consultation after we sent out our invitation, but that they did not submit a response.

Current and future work

Capacity development activities

UNSD, in collaboration with the secretariat of the UNFCCC and other relevant bodies, would carry out capacity development activities with support from regional and other development partners by:

- a) Offering continuous (remote, online) support to countries in their efforts to set up national processes;
- b) Organizing regional workshops based on the findings of the global consultation, which highlighted pronounced geographical gaps;
- c) Leading advisory missions in countries based on raised demands and requests for support.

Further development of the methodology

UNSD, in collaboration with UNFCCC and other relevant bodies, would further develop the methodology for climate change statistics and indicators by:

- a) Reviewing and updating the tier 3 indicators and completing their metadata. Consultations will be organized to advance towards internationally agreed methods;
- b) Following up ongoing statistical processes to ensure that latest guidance is reflected for the indicators at all tiers. Additional fields in the metadata, such as rationale and limitations, will also be considered for inclusion;
- c) Continuing to improve the attribution to climate change or the relevance of the indicators to climate change by narrowing the scope and definition of several indicators or introducing new disaggregation items;
- d) Following up policy and science to identify new indicators to be included in the global set of climate change statistics and indicators in future revisions, and also to possibly remove certain indicators from the list.

Development of training materials and strategies for capacity development and resource mobilization

UNSD, in collaboration with UNFCCC and other relevant bodies, would develop training materials and strategies for capacity development and resource mobilization by:

- a) Developing a strategy with key partners to promote bridging the gap between policy and statistics and between national statistical offices and climate change reporting agencies at the national level;
- b) Developing implementation guidelines for national consultations and data-sharing processes on climate change statistics;
- c) Developing training materials, including e-learning modules, organized according to thematic areas, along with guidance and best practices, on addressing climate change issues by including climate change-related questions in national censuses and surveys, and best practices on the dissemination of climate statistics;
- d) Mobilizing resources to facilitate the training of trainers, based on the assessment of the capacity development needs in the countries revealed by the global consultation;
- e) Developing a climate change assessment tool similar to the Environment Statistics Self-Assessment Tool.

Enhancing the role of NSOs at the country level

- a) Develop national climate change statistics programmes using the global set of climate change statistics and indicators as the framework for climate change statistics and indicators and continue to assess the availability of data for the indicators and statistics according to the tiering system;
- Continue to strengthen their collaboration with the national focal points for UNFCCC (or national authorities responsible for reporting climate change-related information);
- c) Continue to be more involved in the preparation of data submissions to UNFCCC, for supporting the implementation of the Paris Agreement;
- d) Advocate to have a more central role in coordinating climate change statistics based on their mandates to produce official statistics and their role in coordinating national statistical systems;
- e) Strengthen environment statistics, using the FDES, as the basis for developing climate change statistics, given their close interrelationship;
- f) Enhance data collection in the area of climate change statistics by conducting specialized climate change surveys or including related modules in existing surveys and censuses;
- g) Produce and disseminate climate change statistics via dedicated reports, websites or other means.

Concluding remarks

- 1. UNSD has stepped up the coordination of activities related to climate change statistics at various levels via collaboration with:
 - UNECE Task Force on the Role of NSOs in Achieving National Climate Objectives
 - OECD IPAC initiative
 - Paris21 initiative on Climate Change Data Ecosystems (CCDE) for better climate action
 - Pacific Community (SPC) initiative on incorporating climate change-related questions into data collection instruments such as household surveys
 - UK ONS project on Standards for Official Statistics on Climate-Health Interactions
 - COMESA project on Environment and Climate Change Statistics for the African Development Fund Countries
- 2. Following the adoption of the Global Set, UNSD has focused on completing and promoting a set of implementation support tools, including:
 - Climate-ESSAT (CISAT) which was drafted and currently tested in a number of pilot countries in Africa, South America and the Caribbean regions
 - Implementation guidelines, initially drafted before the adoption of the Global Set, now being revised and improved, to be discussed at the next EGES meeting
 - Training materials and presentations
- 3. The Global Set has proven useful, not only for capacity building and application in countries, but also for supporting methodological development in several topics, including health, gender and disasters.

Thank you for your attention!
