

# The Statistical Committee of Republic of Armenia

## Using the State Population Register to generate an address list and the sample

Member of the State Council on Statistics,  
Deputy President of the Statistical Committee  
GAGIK GEVORGYAN

# STATE POPULATION REGISTER (SPR)

---

- ▶ individual code;
- ▶ sex;
- ▶ day, month, year of birth;
- ▶ citizenship;
- ▶ ethnicity;
- ▶ place of birth;
- ▶ resident or refugee status.

The variables of the State Population Register (SPR) of the Republic of Armenia (RA) are listed above.

---

# The interaction process between the **State Population Register (SPR)** and the **Border Electronic Information System (BEIS)**.

---

With the help of specially engineered software, a platform has been made to collect statistical data in real time through ensuring interaction between the administrative databases of the SPR and PEIS systems.

Currently, the following data are available through the ARMSTAT-y platform:

- ▶ Data of persons registered in the State Population Register;
- ▶ Current population data; and
- ▶ Resident population data.

- ▶ Cooperation with the PEIS enabled to exclude the persons who have been absent from the country for more than 12 months from the SRN.
- ▶ Since the Address Register was/is under development in Armenia, the Address List used for the population census was generated from the SPR.
- ▶ The local population census staff checked all the compiled address lists in all regions (Marzes) of the Republic of Armenia and in the city of Yerevan.

# SAMPLING

---

- ▶ The sample comprised 25% of addresses in all settlements of Armenia.
- ▶ The already selected addresses were double-checked by the census staff, by census coordinators in particular.

Census blocks were shaped after the above works were completed.

# THANK YOU FOR YOUR ATTENTION
