Abstract

In this paper we will discuss the methodology and management strategies adopted to recover a survey on students daily life in order to investigate the daily life of children and teens (aged 10-19 years) during the recent health crisis.

Due to the Covid-19 social rules introduced to limit the pandemic in Italy in 2021, the initial survey design based on web questionnaire to be self-completed at school to sample of students, over than face-to face interviews to a sample of principals, had to be quick revised.

Taking into account the pandemic context in constant evolution, main efforts were devoted to: i) revised survey technique ii) managing personal data of minors according to GDPR; iii) design an attractive and easily accessible self-administrated survey for teens; iv) actions to improve participation in itinere
