**Why engaging citizens
in science and policy
will help cities?**

GIVE A MAN A FISH AND YOU
FEED HIM FOR A DAY, TEACH A
MAN TO FISH AND YOU FEED
HIM FOR A LIFETIME.

Lao Tzu

- 
1. Cities need relevant and insightful environmental data for decision making. Current monitoring systems are costly and do not always have data when and where need it.
 2. Information needs to resonate to people in a world full of “noise” and “fake news”.
 3. Cities need actions to reduce the impacts of climate change and environmental degradation to the health of the citizens and the planet. Cities do not have time to lose.

ACTION citizen science projects

Street Spectra (light pollution, ES)

Street Colours (light pollution, ES)

Tatort Street Light (light pollution, DE)

Loss of the night (light pollution, worldwide)

DYI sensing (air pollution, NO)

Dragonflies and pesticides (chemical pollution, NL)

CitiComPlastic (plastic pollution, NO)

In My Backyard (pesticides, PT)

Noise Maps (noise pollution, ES)

Sonic Kayaks (water / air pollution, UK)

Water for Future (water pollution, IT/CL)

WOWNature (air pollution, IT)

Citizen generated data can complement current measurements and increase the number of observations of the (urban) environment.

Data collection

Data Quality

Sufficient level of detail

The data is collected with continuity

The data is not affected by extraordinary events

Accurate information

FAIR

Comprehensive observations of the surrounding environment

Correct categorization of the data

Full coverage of the relevant area/problem

Proper calibration of instruments

Completeness of the data collected (numerous indicators)

Main Barriers

The usage of technologies (even if basic)

Difficulties in task execution that request collaboration with experts

Different competing priorities for volunteers

Time availability of participants

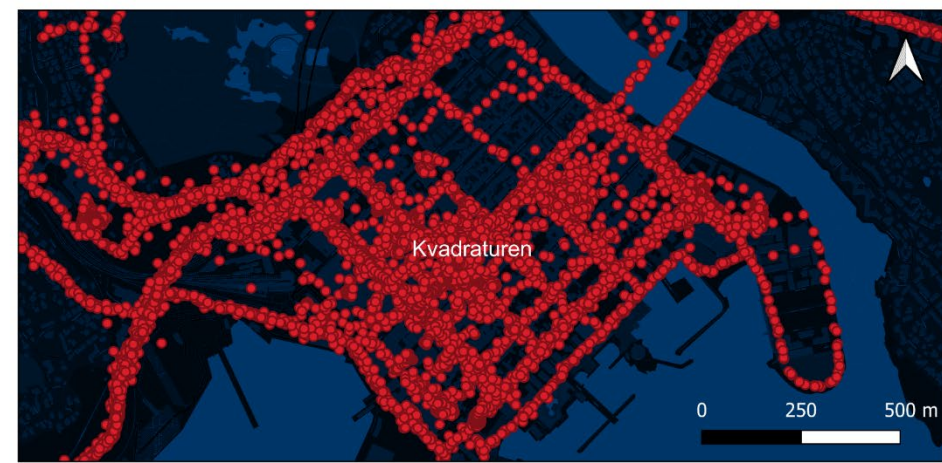

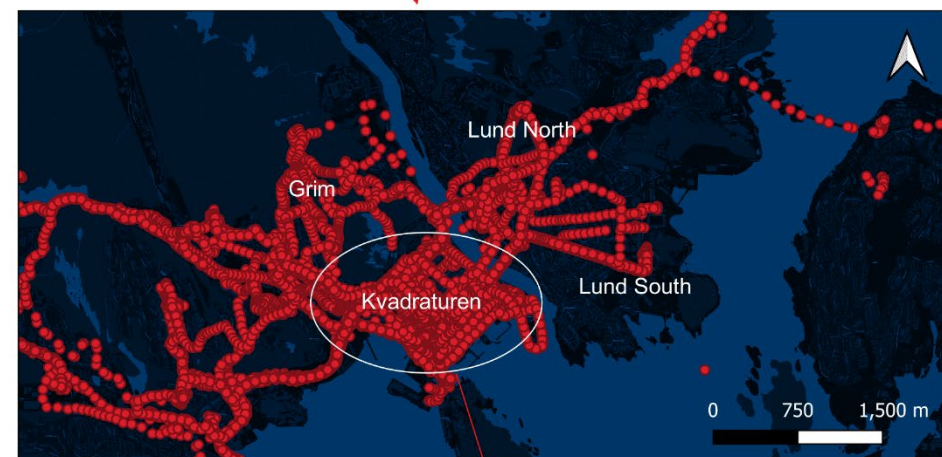

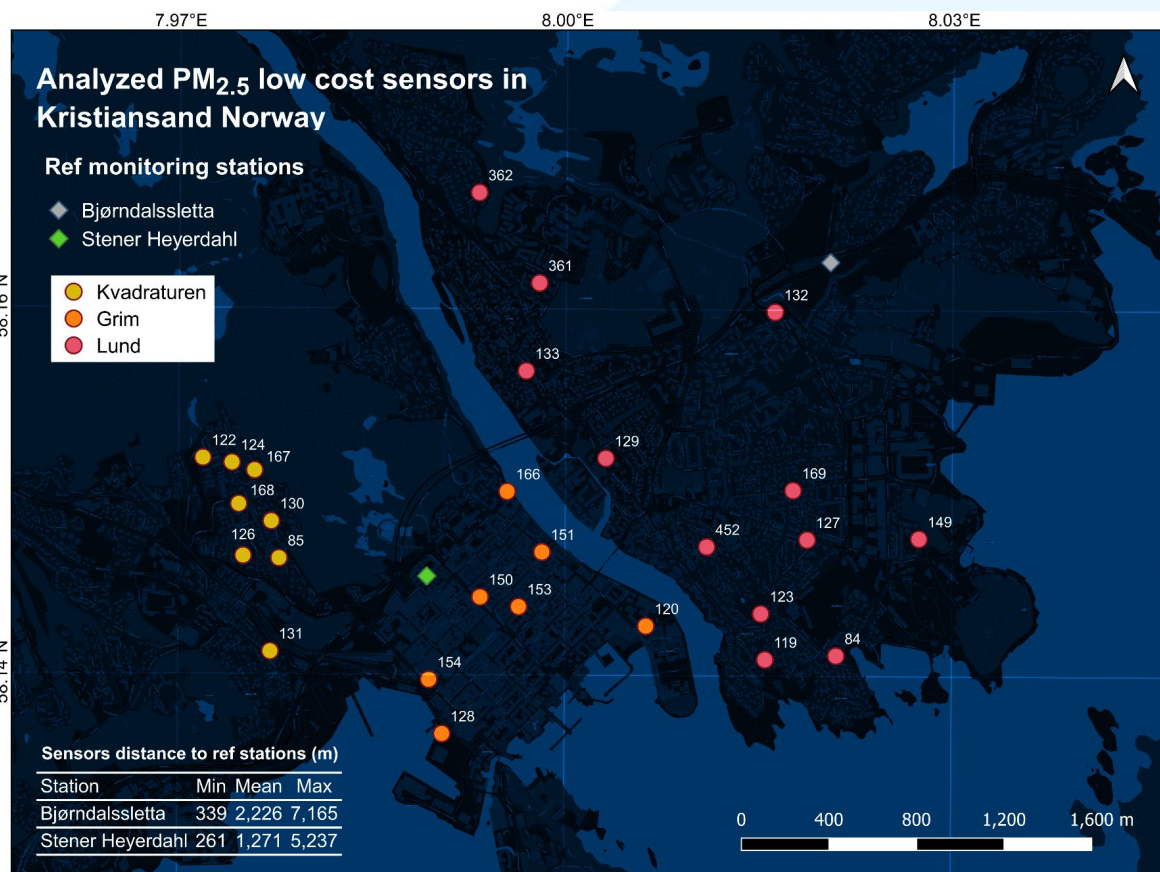

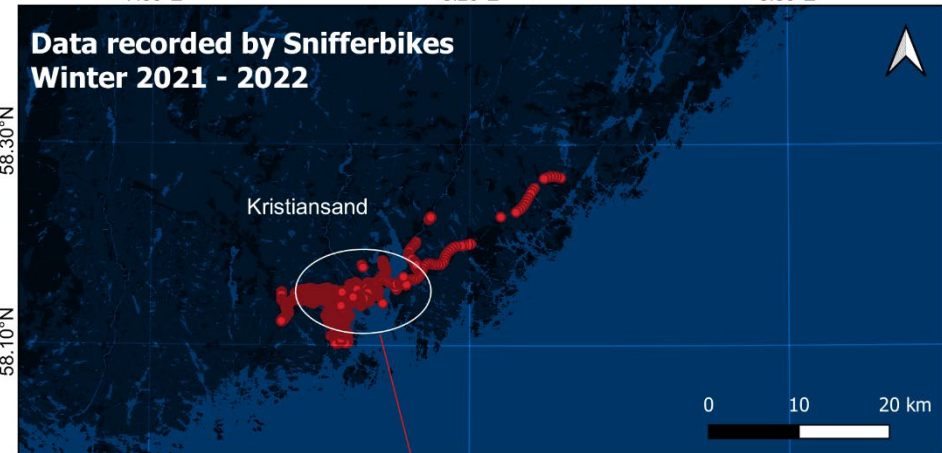

Damaging or stealing of sensor

Incomplete information from volunteers

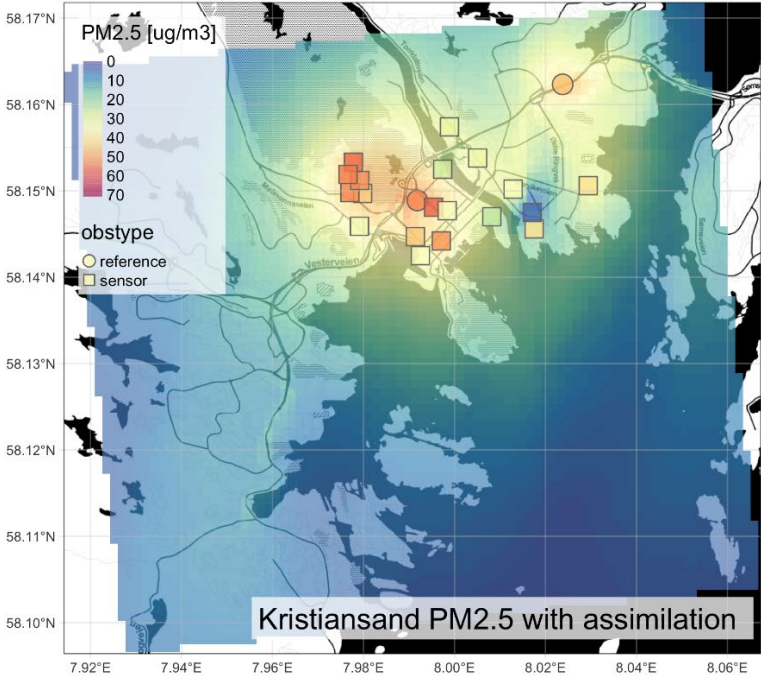

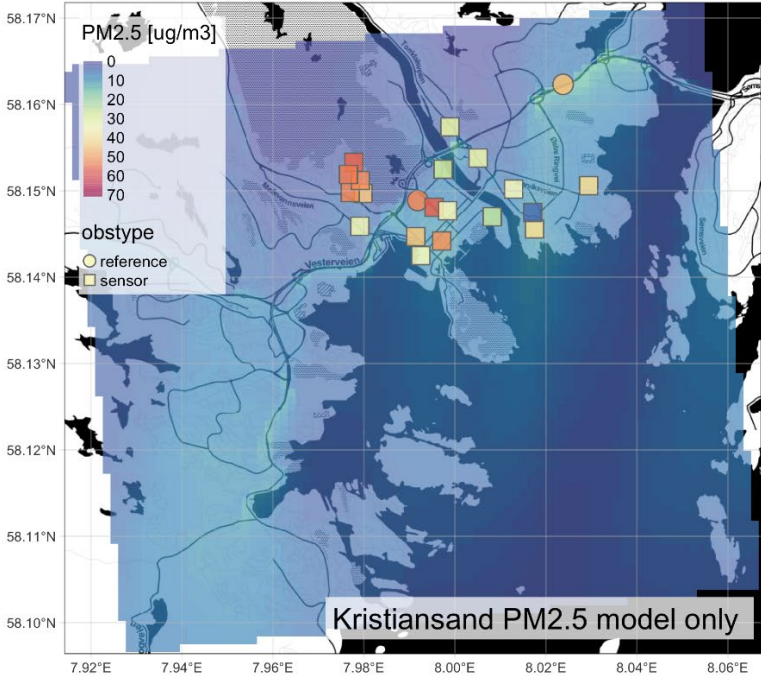

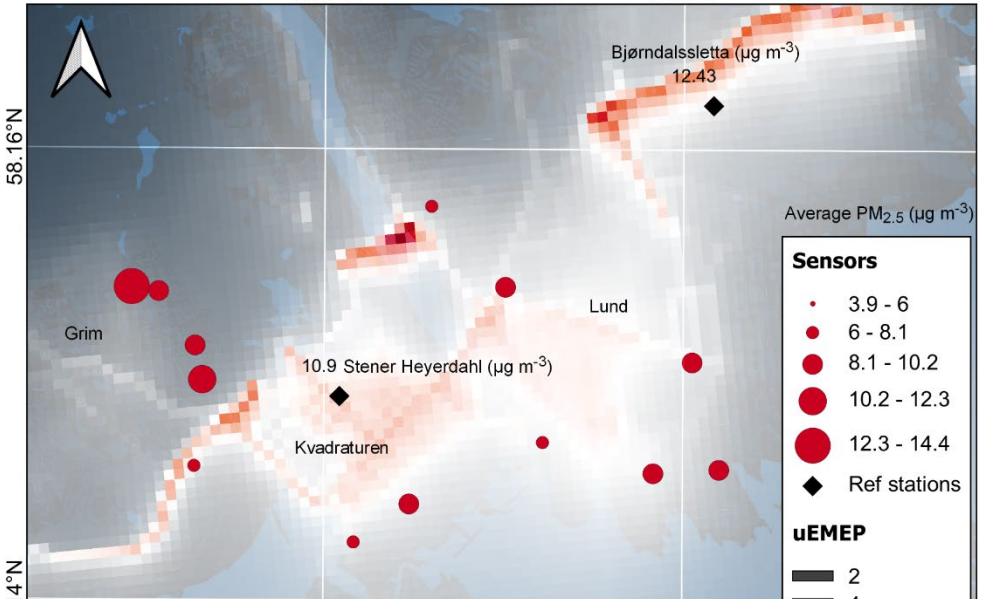

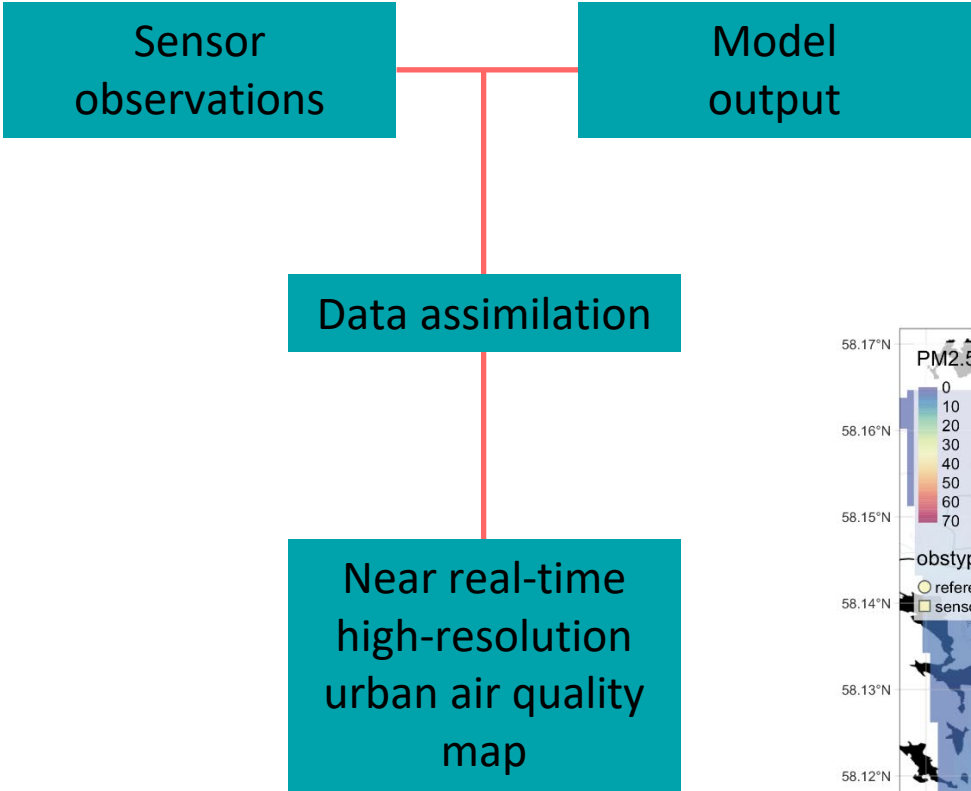

Adequate quantity of volunteers

Fully understanding of the participants about what we are looking for

Guarantee stable support and training to participants

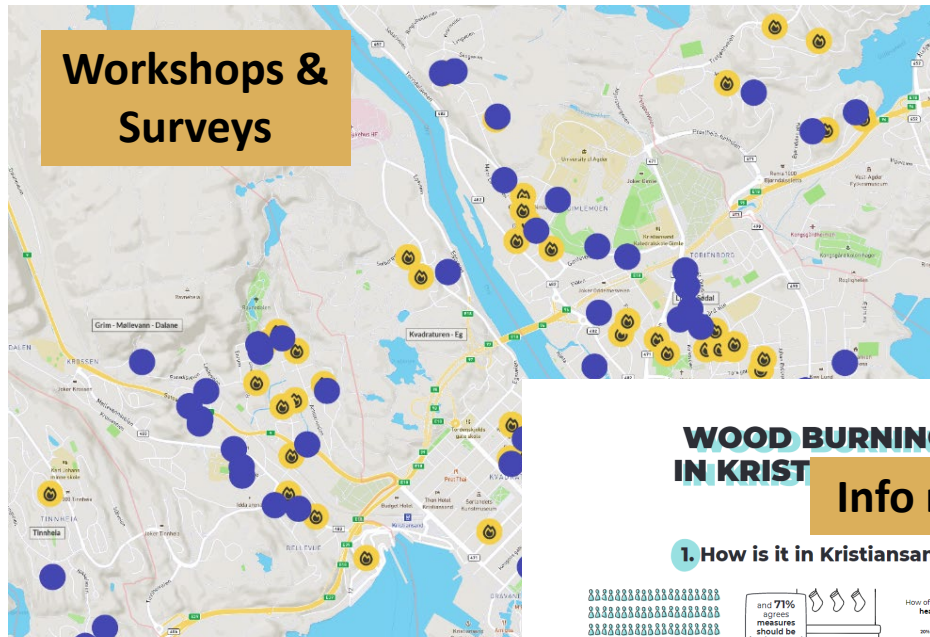

Sensor data assimilation

Citizen Science increases awareness, involvement and engagement of citizens from all backgrounds and age with science and policy.

Workshops & Surveys

Residents are invited to co-creation workshops to discuss new incentives and policies towards healthier cities

WOOD BURNING IN KRIST Info material

1. How is it in Kristiansand?

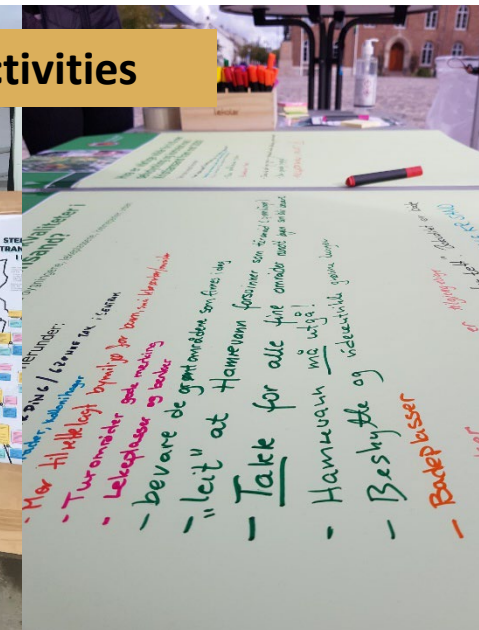

2. Why is it important?

3. What can be done?

Street Activities

Participatory Budgeting

How would you prioritize municipal spending on reducing pollution from household heating?

0 / 100

0%

Replacement of old wood stoves for modern and more efficient ones

0

Installation of solar panels at the housing associations (borettslag)

0

Extension of district heating to other areas

0

Better household isolation

0

Educational and awareness raising campaigns

0

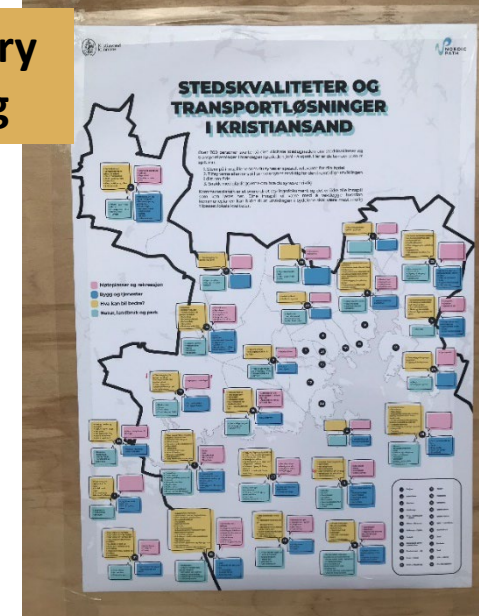

My own suggestion

0

My own suggestion

Please specify

< >

Citizen Science increases opportunities for shared responsibility in the protection of the (urban) environment and deepens the role of citizens in governance.

Co-creation of data and actions for healthy, sustainable and resilient cities with Citizen Observatories

5
Frontrunners

30
Implementers

50
Fellows

New Horizon Europe Project: CitiObs

CitiObs will connect, support, enhance and scale up COs so they can provide the locus for jointly monitoring the environment, and for initiating and undertaking citizen-led actions protecting the urban environment, alongside changes in policy.

Citizen Science is a powerful research and policy-making approach in support of cleaner air, providing:

- Data
- Awareness
- Actions

It is important to integrate Citizen Science in research and governance to achieve the zero pollution goals.

Thank you for your attention
