

Challenge 2: Prevention by design: safe industrial installations in a changing climate

Joint Expert Group on Water and Industrial Accidents

*Seminar on emerging risks in accidental water pollution:
focus on natural hazard-triggered accidents*
Budapest, Hungary and online, 5 October 2022

CHALLENGE 2 - BREAK-OUT GROUPS

1. Should climate change lead to a different way of designing, constructing, operating and maintaining industrial installations (to prevent accidental water pollution)? If so, how?
2. How can we make sure that all natural hazards that may trigger accidental water pollution are considered when planning, building, operating or decommissioning an industrial installation?
3. Constructing an installation outside of a natural hazard-prone area is the ultimate way of preventing Natech. But what should we do if you can't build outside such a hazard-prone area?
